> communications in a long service with the U.S. military. You've
> never acknowledged any working knowledge of common small-
> unit military radios in use during that U.S. military service.

Sure I have. Again, YOU ignore it. And YOU did not have but 3 years of "service with the U. S. Military). I beat that many times over.

> You've never acknowledged any working knowledge of Yiddish
> yet you freely use at least one Yiddish pejorative in many public
> postings.

Nor do I have a "working knowledge" of Japanese, Serbo-Coratian, or Tagalog, yet I can speak enough words of each to ask for help, find a cop and get drunk. I can speak conversationalist German and Spanish.

You speak...What...???

Please tell us just how competent YOU are in Yiddish. (use of a search engine notwithstanding).

> You've never acknowledged the real reason for your very short
> "career in electronics engineering" as a purchasing agent for a
> set-top-box maker that lasted less than half a year.

I never said I was an engineer. And you still don't have the facts of my employment there correct.

I stated several times over my reason for leaving nursing for a while in 2000. Everyone else that's been in here any length of time knows...except you...why is that? And I was there much longer that the "less than half a year" you keep falsely reitrating.

Also, I did not work for a "set top box maker". The company I DID work for occupied the opposite end of a building from that company (ANTEC). We rented space on their servers. You've also been told that over and over yet keep trying to make an issue out of it.

Why do you keep lying over and over, Lennie? E V E R Y O N E here sees it. Why do you keep humiliating yourself?

> You've never acknowledged that the U.S. military did NOT make
> you any sort of pilot of any military aircraft despite implying
that
> you were licensed as a private pilot before entering the military.

I never said I was a military aviator. You are welcomed to try and find ANY quote ANYwhere that says otherwise. And I WAS licensed before I went on active duty. My initial Airman's certificate was signed in August 1974. I went on active duty in September 1974.

Again, facts you've been provided with over and over, but seem to want to lie about over and over.

> You've never acknowledged many, many mistakes you've made
> in here, constantly over several years.

Unlike you, Lennie, I don't keep making the same mistakes over and over.

> You've never acknowledged any knowledge of radio-electronics
> circuitry behind the front panels of amateur radios, yet you claim
> to be knowledgeable about "radio."

I AM knowledgeable about "radio". Do I have a doctorate level degree in engineering...??? Of course not. But then I don't need it, either. I've built radios from scratch and from kits...I was paid by Uncle Sam for 2 decades to maintain aircraft (and some ground) radios. I am the owner/operator of a federally licensed radio station.

> >> As to the alleged claim about LIQUID methane in my personal

> considered "civil" and that is certainly not "reasonable
discourse."

We've seen the results of YOUR "civil discourse", Lennie.

I may be crude and unrelenting in my exchanges with you, but I am
not a liar, and at the end of the day, it's all about character.

> Tell us again how your warm, witty, and civil manner attracts all
> those non-radio people into amateur radio and the hundreds (?)
> or dozens (?) or a few (?) you have "mentored" into ham radio.

I've already done that.

I still DO it.

YOU have been asked over and over and over, by more than a few
persons, to tell this forum how many people YOU ahve mentored in ANY
radio hobby...CB, Amateur, SWLing, etc.

So far, the answer is zero.

> Tell us again of your vast experience in the aerospace industry
> from which you can use as a reference to "correct" everyone else
> and lends credence to your credentials as a space biz guru.

So far the references YOU have provided have only borne out that
you were less than all you could be.

> Tell us again of how you can simply pick up a telephone and
> call authorities (by virtue of your importance as a "medical
> professional") to come and have "anyone" picked up and
> committed (to a mental institution).

Out of context, but I suggest you do some reading, Lennie.

> LenAnderson@ieee.org

A pathological liar of monumental proportions. A putz for all
times.

What does it matter? If someone disagrees with Len, there's no possible
employment or education they could have that Len would find significant, except
to make fun of it. Look at K8MN's resume - then see how Len treats him.

>I stated several times over my reason for leaving nursing for a

Exactly!

Back in my days at University, the profs who got the most respect were those
who didn't demand being addressed by specific titles.

One thing common to all of talk radio is that the host or an assistant has
his/her finger on the cutoff button all the time. Nobody dares to disagree with
the "expert" for fear of being cut off. At least HS is honest about it.

Ahhhhh, yes. Unfortuntely that's the part our resident
"professional" forgets!

> require a certain number of hours in order to renew?

Ummmm....I am not sure what you mean by "renew".

An Airman's certificate is a lifetime grant. The Flight Medical
has to be renewed, and it's duration depends on the class of medical
and the privileges being exercised.

You are required to fly a Biennial Flight Review once every 24
months for the PPL.

As for my flight currency, the FAA only requires that I have three
take-offs and three landings to a full stop before carrying passengers
(other than the aforementioned flight check)

CAP's regulations are a bit stiffer. CAP requires the FAA
standards plus a "Form 5" ride every year in each category. (I can take
a checkride in the Cessna 182 and it's also good for the smaller 172)
Plus I have to complete the written exam on model I fly yearly.

Then if I fly as a Mission Pilot, there are additional
requirements, both in the air and administratively. I do not currently
fly as a Mission Pilot.

> >I have multiple licenses as a healthcare provider.

Yu-hup.

> IOW, it's not just what you know - it's also about what you continue
to learn.

Yu-hup. And then there's my BCLS, ACLS, EMS-C, PALS, and other
certifications. All typically require 2 year recertifications. All
are required for me to function as an ER/Trauma Nurse.

None to policy. However I was a radio OPERATOR in the Marine
Corps (in addition to being a repairman.) More accurately I was the
CHOP for a gateway station and theater net control while on Okinawa.

I >KNOW< Spanish and German (conversational...I'd hate to get drawn
into some "meaningful" conversation!). The other three, as I said,
were just a few words!

I am sure Lennie's "mastery" of "Yiddish" ends with the clicking
of a mouse and use of a search engine.

Ironic then that when Lennie provided HIS resume all it did was
give me a place to start in on him. Dumb thing to do when you have
"history" that shouldn't see the light of day!

> >I stated several times over my reason for leaving nursing for a

I know, Jim. I guess it's easier to understand why it took Lennie 14 years to complete a "degree"...Poor fella can't remember squat any longer than his last nap.

Where in the world did he pull that gem from, Jim...?

Have I EVER said ANYthing that even remotely sounded like "I was a military aviator"...?!? I believe I have been very careful to clearly make that distinction.

> >Again, facts you've been provided with over and over, but seem to

issue.

And with as many times as he's poured through Part 97 trying to find some "point" to try and MAKE a point of, you'd think he at least would have remembered having seen it "somewhere".

I guess not.

If he'd get over his ARRL phobia and watched the homepage on occassion, he'd also see lots of letters from Riley % Company under "Enforcement Letters" on the very same subject.

it.

He can make fun of the time of day, if he cares to...the FACTS
remain that Lennie has NONE of the qualifications in any of those
disciplines in which he insinuates he does.

> Remember when I was challenged about my knowledge of the Smith chart,
and I
> wrote some sample problems and their solutions? Didn't make any
difference to
> Len.

Nope.

Early on in our exchanges Lennie made a point of bragging about
how he and his colleagues could offer so much to Amateur Radio.

OK...I suggested he start a discussion on microwave technology.
Of course he THEN started in on how he wasn't going to do for FREE what
he normally "get's paid" for.

I think he made his ulterior motives clear then.

> Or you could say you were just pulling Len's leg. That's what he
says....

Oh! Yeah! That's the ticket!

> Just don't take him so seriously. Nobody else does.

I just want to make sure it stays that way.

In the 1700's and 1800's people used to tell tales that African
natives grew tails in the full moon light and danced in reverence to
Satan. Nothing was further from the truth, however "authoritive
sounding" persons kept promoting it as "truth". Otherwise naieve or
ignorant persons just assumed it was true.

Lennie can sound very convincing. Very little of it is truthful,
but just enough of it is, and that's the hook.

Uh huh...I love how his "revelation" of "humor" comes after two weeks of getting his nose rubbed in his arrogant stupidity.

I get the feeling Lennie was the kid on the block with the only decent football who would snatch it up and run home as soon as it was apparent that he wasn't good at it and was getting beat soundly. He certainly comes off that way.

Not even close...

>I have an Amateur Radio Extra Class license...You don't.

You can pick up your Ham Hero Award at the door on your way out.

If you don't see your name on the box, it is in the one labeled
"to whom it may concern."

>You
>profess to know about Amateur Radio, yet have no practical experience
>in it.

Tsk. FCC Commissioners and staff are not required to have
personal amateur radio licenses in order to REGULATE U.S.
amateur radio! [sunnuvagun!]

>I have an FAA Airman's Certificate and have currency in 3 types.

Irrelevant insofar as radio is concerned.

Note: This newsgroup is about amateur radio policy, not flying.

>I have multiple licenses as a healthcare provider.

Irrelevant insofar as radio is concerned.

Note: This newsgroup is about amateur radio policy, not health
or medicine.

>You have none,
>although you somehow insinuate "experience" by virtue of sleeping with
>a person with a diploma from K-Tel, Ronco, or some other such place.

Irrelevant insofar as radio is concerned.

Note: This newsgroup is about amateur radio policy, not diplomas
or correspondence schools nor libelous personal insults alleging
I am "sleeping with" someone other than my wife.

>> You've never acknowledged that the Department of Defense
>> directs MARS.
>
>Sure I have. Several times over. You keep ignoring it.

There is nothing to ignore. You have not acknowledged that
the Department of Defense directs the Military Affiliate Radio
System. You keep insisting that "amateurs are MARS."

>> You've never acknowledged the when and where of those
>> "seven hostile actions."
>
>They were and are none of your business.

In other words, those do not exist. LYING. Braggadoccio.

>They exceed YOUR "hostile actions" by seven.

Impossible. You cannot use imaginary incidents to claim any sort
of "superiority" in anything.

>> You've never acknowledged that the University of Illinois is
>> NOT a correspondence school.
>
>The University of Illinois does have extension courses.

That may be (haven't checked their syllabi). Nonetheless, my
wife earned TWO Masters Degrees from the University of Illinois
at Urbana, attending formal classes ("formal class" refers to being
present IN class). She was aided in that with formal classes at
the University of Wisconsin at Madison.

Irrelevant insofar as radio is concerned.

Note: This newsgroup is about amateur radio policy, not colleges
or universities nor postgraduate studies.

>> You've never acknowledged anything close to working military
>> communications in a long service with the U.S. military. You've

>> never acknowledged any working knowledge of common small-
>> unit military radios in use during that U.S. military service.
>
>Sure I have.

That's not visible in Google. You have NO expressed familiarity
with any common U.S. military land forces radios OR aircraft
radios by formal name, familiar name, nor the "AN/" number.
You have derided the SINCGARS family of radios (operational
since 1989, approximately quarter-million sets in use worldwide)
and claimed you "could not talk about them due to such
information being classified." In other words, you tried to bullshit
your way through in a common ordinary set of LIES.

>Again, YOU ignore it. And YOU did not have but 3
>years of "service with the U. S. Military).

True! I had 8 years...4 active, 4 in reserves.

>> You've never acknowledged any working knowledge of Yiddish
>> yet you freely use at least one Yiddish pejorative in many public
>> postings.
>
>Nor do I have a "working knowledge" of Japanese, Serbo-Coratian, or
>Tagalog, yet I can speak enough words of each to ask for help, find a
>cop and get drunk. I can speak conversationalist German and Spanish.

Tsk. You put the order of precedence inverted...should have put
"drunk" first in line. :-)

Irrelevant insofar as radio is concerned.

Note: This newsgroup is about amateur radio policy, not language
or linguistics.

>Please tell us just how competent YOU are in Yiddish. (use of a
>search engine notwithstanding).

Irrelevant insofar as radio is concerned.

Note: This newsgroup is about amateur radio policy, not ethnic
groups.

>> You've never acknowledged the real reason for your very short
>> "career in electronics engineering" as a purchasing agent for a
>> set-top-box maker that lasted less than half a year.
>
>I never said I was an engineer.

You claimed to "know all about electronics engineering."

>And you still don't have the facts of my employment there correct.

We just don't know the circumstances of why you "left" in
full detail. :-)

Irrelevant insofar as radio is concerned.

Note: This newsgroup is about amateur radio policy, not human
resources or industry employment practices.

>Also, I did not work for a "set top box maker". The company I DID
>work for occupied the opposite end of a building from that company
>(ANTEC). We rented space on their servers.

So, if it was NOT "Antec," what was the company name?

Irrelevant insofar as radio is concerned.

Note: This newsgroup is about amateur radio policy, not
corporate structures or business practices.

>> You've never acknowledged that the U.S. military did NOT make
>> you any sort of pilot of any military aircraft despite implying that
>> you were licensed as a private pilot before entering the military.
>
>I never said I was a military aviator. You are welcomed to try and
>find ANY quote ANYwhere that says otherwise. And I WAS licensed before
>I went on active duty. My initial Airman's certificate was signed in
>August 1974. I went on active duty in September 1974.

Fifteen years later, the first of the SINCGARS radios became
operational with the U.S. military. Since then a quarter million
sets have been produced and put into service. You have NO
familiarity with such radios, do not know what a "hop set" is.

>> You've never acknowledged any knowledge of radio-electronics
>> circuitry behind the front panels of amateur radios, yet you claim
>> to be knowledgeable about "radio."
>
>I AM knowledgeable about "radio".

Only AMATEUR radio. Non-commercial, recreational, hobby
activity radio. That is all. However, the physics of electromagnetism
works the same for ALL radio services, is not changed by various
human legislation dictating certain "services" are for certain
applications.

>I am the owner/operator of a federally licensed radio station.

Someone else has to nominate you for the "Who's Who" in the
radio industry.

>> >Oh, I KNOW what temperatures methane liquifies at.
>>
>> Then write it. Demonstrate that methane can exist in liquid form
>> anywhere on the Earth's surface.

You have NOT answered a simple question requiring only four
ASCII characters. In other words, you do NOT know the
temperature of liquid methane. Nor, for that matter, the chemical

composition of methane.

Irrelevant insofar as radio is concerned.

Note: This newsgroup is about amateur radio policy, not chemistry.

>> >And I know what a cold piece of work you are.
>>
>> 98.6 F average.
>
>Not in your heart.

Perhaps true. I have not had any temperature measurements
of my internal organs.

Irrelevant insofar as radio is concerned.

Note: This newsgroup is about amateur radio policy, not personal
internal medical conditions.

>I may be crude and unrelenting in my exchanges with you, but I am
>not a liar, and at the end of the day, it's all about character.

Irrelevant insofar as radio is concerned.

Note: This newsgroup is about amateur radio policy, not personal
vendettas due to your unbalanced, sociopathic tendences or lack
of self-control when others disagree with you.

>> Tell us again how your warm, witty, and civil manner attracts all
>> those non-radio people into amateur radio and the hundreds (?)
>> or dozens (?) or a few (?) you have "mentored" into ham radio.
>
>I've already done that.

No. All you've done is to make non-quantified braggadoccio (also
known as "bragging") without identifying the number or names.

>I still DO it.

More bragging without qualification of the numbers or activity.

>> Tell us again of your vast experience in the aerospace industry
>> from which you can use as a reference to "correct" everyone else
>> and lends credence to your credentials as a space biz guru.
>
>So far the references YOU have provided have only borne out that
>you were less than all you could be.

You have NOT checked any of the references I provided, either
corporate or personal. You cannot claim any "judgement" other
than attempting yet another personal insult...which falls flat...again.

>> Tell us again of how you can simply pick up a telephone and
>> call authorities (by virtue of your importance as a "medical

>> professional") to come and have "anyone" picked up and
>> committed (to a mental institution).
>
>Out of context, but I suggest you do some reading, Lennie.

"Reading" of what? You cannot do what you claim and there is NO legislation anywhere in the USA that "authorizes" you to do that.

Irrelevant insofar as radio is concerned.

Note: This newsgroup is about amateur radio policy, not KKK activities by "Steve and the boys."

>A pathological liar of monumental proportions. A putz for all
>times.

Tsk. Another personal claim of greatness for yourself. :-)

Not at all, "bb". I answered your question. I don't guarantee that
you'll like the answers.

> Much like the rest of your coments.

I suppose that your comments indicating confusion over why your
telephone works when your power isn't on are infused with genuine
concern. ;-)

Once again, I've given you good advice. Your power company and your
telephone company will be better equipped than anyone to allay your
worries over the issue.

As I had said, those are ideas that she has right. But if she was handing out advice as Laura Schlessinger, that would be cool. But I thought she was a psychologist for quite a while when I listened to her. Lots of people are "allowed" to think that.

And remember that she is very judgemental on her show. Judgemental people are in turn judged.

Since these are opinions pieces (like talk radio) rather than amateur
specific news bulletins, I would say they are on the wrong side of the line
as far as the the FCC rules go.

: Nobody seems to care about amateur radio including the hams themselves.

We hams are no longer viewed by any significant authority as anything more than a motley collection of hobbyists. Sorry: fact of life. Gripe if you wish. It won't change the truth. In fact, many authorities wish we would disappear. We are, at best, "overbearing, unqualified tinkerers," and at worst "overbearing, unqualified tinkerers." Well, we could leave off the word "tinkerer" as the majority of hams have no ability nor desire to tinker. We are in no way, speaking generally, that 'pool of qualified electronics techs' the FCC mentions, although we seem to think we are. Those days are gone.

Seems I have "it" documented in federal, state and local records.

> >I have an Amateur Radio Extra Class license...You don't.
>
> You can pick up your Ham Hero Award at the door on your way out.

No "hero award", Lennie.

Just one of the MANY things that I DO have that you do not...CAN
NOT have. You talk big about a great many things, but do nothing about
it...Except to try and make things miserable for those who DO choose to
do "it".

> If you don't see your name on the box, it is in the one labeled
> "to whom it may concern."

At least I >>AM<< concerend, Lennie.

You aren't.

> >You
> >profess to know about Amateur Radio, yet have no practical
experience
> >in it.
>
> Tsk. FCC Commissioners and staff are not required to have
> personal amateur radio licenses in order to REGULATE U.S.
> amateur radio! [sunnuvagun!]

Lennie, YOU are NOT an FCC Commissioner.

Discussing the FCC commissioners does not negate the fact that YOU perport to know and have experience in thse many things, yet you obvioulsy DON'T have the knowledge OR experience in them.

FCC commissioners have a duty to perform. You don't.

You're a big mouth. That's all. You know a lot of little trivial things...no more.

> >I have an FAA Airman's Certificate and have currency in 3 types.
>
> Irrelevant insofar as radio is concerned.

But not irrelevant as YOUR frequent diversions into matters of airmanship. Another discipline that you shoot your mouth off on and have no eal EXPERIENCE in. It's so obvious that everyone EXCEPT you sees it.

> Note: This newsgroup is about amateur radio policy, not flying.

True, but that never stops you from discussing NAVAIDS, aerial navigation, or a host of other aviation related subjects from which your ONLY experience is a web based search engine.

Nor is it about the US Army in 1953, aerospace, or disaster response, however you frequently deleve into those topics when the mood strikes you.

> >I have multiple licenses as a healthcare provider.
>
> Irrelevant insofar as radio is concerned.

But it's 100% relevent in this forum since YOU frequently bring up discussions on the matter. Again...just one more discipline that you run your obviously ill-prepared mouth off on.

> Note: This newsgroup is about amateur radio policy, not health
> or medicine.

Here again we have Lennie TRYING to chastise others for liberties HE takes at will.

Sorry Lennie. It doesn't work that way. If it's OK for you, it
IS "ok" for the rest of us...ESPECIALLY those of us with the
credentials from which to make informed opinions.

> >You have none,
> >although you somehow insinuate "experience" by virtue of sleeping

> Irrelevant insofar as radio is concerned.
>
> Note: This newsgroup is about amateur radio policy, not diplomas
> or correspondence schools nor libelous personal insults alleging
> I am "sleeping with" someone other than my wife.

I didn't say you were sleeping with anyone BUT your wife. What I
AM saying is that YOU have made so many easily disproven lies in this
forum that only the very gullible or the very very easily fooled
believe any statement by you that your wife holds any of the
credentials you claim she does.

Furthermore, as a healthcare provider myself, I have to question
her competence and credibility if, as you have claimed she does, she
reads any of what you post in here. To allow a person she supposedly
loves to act this way in public, let alone as a credentialed mental
health provider, is unthinkable.

> >They exceed YOUR "hostile actions" by seven.
>
> Impossible. You cannot use imaginary incidents to claim any sort
> of "superiority" in anything.

I never claimed "superiority" over anything, Lennie.

That's a mindset YOU have established in order to justify your positioning yourself as the noble defender. You are neither "noble" or "defending" anything. You are no one's advocate save your own despite your self-indulged delusion otherwise.

> >> You've never acknowledged that the University of Illinois is
> >> NOT a correspondence school.
> >
> >The University of Illinois does have extension courses.
>
> That may be (haven't checked their syllabi).

Of course you haven't, Lennie! We'd expect nothing more from you! And "syllabi" is not where you ant to look. The catalog is.

> Nonetheless, my
> wife earned TWO Masters Degrees from the University of Illinois
> at Urbana, attending formal classes ("formal class" refers to
being
> present IN class).

"In residence" means being "IN" class.

> She was aided in that with formal classes at
> the University of Wisconsin at Madison.

You CLAIM she has those credentials. I say if she did, and she has the experience you alledge her to have, she'd smack you upside the head and forbid you from acting this way in public.

She obviously hasn't, so you were either lying about her awareness of your conduct in this forum or you were lying about her education and experience. In either care, you WERE (are) lying.

> Irrelevant insofar as radio is concerned.

Right again, but you DO go right on bringing it up. Why is that?

> Note: This newsgroup is about amateur radio policy, not colleges
> or universities nor postgraduate studies.

bullshit
> your way through in a common ordinary set of LIES.

I have NEVER "derided" SINCGARS, Lennie.

I have said they are not relevent to Amateur Radio. That's true.
And every system I ever worked on in the USMC has no application in
Amateur practice. Some Harris RF230's were as close to "Amateur"
application as is possible, however I'd never own one save for use with
CAP.

NO APPLICATION.

And the claims of "classified" and being "unable to discuss" were
YOUR defenses when asked about your alleged "part time" works as an
"engineer". (I can't even say that without losing my composure and
laughing!)

> >Again, YOU ignore it. And YOU did not have but 3
> >years of "service with the U. S. Military).
>
> True! I had 8 years...4 active, 4 in reserves.

OK...I stand corrected on four years active vs three years...My
bad.

However YOUR "reserve" duty was NOT active reserves. You were
still under a formal obligation to return to active duty if called,
however you were not in uniform, you were not standing watches, and you
CERTAINLY were not anywhere near being in harms way. (You weren't even
there when you WERE on acitve duty!)

> >> You've never acknowledged any working knowledge of Yiddish

> or linguistics.

But LENNIE! YOU are the one who is constantly insisting that I
don't have any "working" knowledge of Yiddish just becasue I call you a
(very well deserved) putz.

I dare say there are tousands of words YOU use from other
languages without having a "working knowledge" of the language from
which they spring.

For PRIME example, just how much LATIN do you actually speak?
Whole, meaningingful sentences now...Not just snappy phrases you like
to tack onto your RRAP posts in order to LOOK educated.

> >Please tell us just how competent YOU are in Yiddish. (use of a

>
> Irrelevant insofar as radio is concerned.
>
> Note: This newsgroup is about amateur radio policy, not ethnic
> groups.

Ahhhhhhh....I see!

Yet another nail hit on the head that Lennie wished to get out
from under! Shall I save this post from which to use as retort for
your future suggestions of linguistic incompetence?

> >> You've never acknowledged the real reason for your very short

> >> set-top-box maker that lasted less than half a year.
> >
> >I never said I was an engineer.
>
> You claimed to "know all about electronics engineering."

No, I did not. YOU said I made that claim, and I didn't.

You've been asked before, and I am asking again...WHERE was that
said by me?

> >And you still don't have the facts of my employment there correct.
>
> We just don't know the circumstances of why you "left" in
> full detail.

Anyone who was paying attention to why I left NURSING for a while
in 2000 understands perfectly. I bet Brian Burke can explain it to
you, Lennie.

I LEFT Atlanta to go back to Nursing. It really is THAT simple.

> Irrelevant insofar as radio is concerned.
>
> Note: This newsgroup is about amateur radio policy, not human
> resources or industry employment practices.

Then why do YOU keep bringing it up, Lennie...?!?! I don't.

> >Also, I did not work for a "set top box maker". The company I DID

>
> Irrelevant insofar as radio is concerned.
>
> Note: This newsgroup is about amateur radio policy, not
> corporate structures or business practices.

You're right again! Yet YOU keep bringing up your alleged
aerospace contractors and retirement packages! NONE of which (except
in YOUR mind as the mood strikes) are pertinent to AMATEUR RADIO.

> >> You've never acknowledged that the U.S. military did NOT make

So, Lennie...How did you go from making inappropriate suggestions
of where/how I became an aviator to discussing the entry of SINCGARS to
military service...???

Are you going to acknowledge your error or not?

> >> You've never acknowledged any knowledge of radio-electronics
> >> circuitry behind the front panels of amateur radios, yet you
claim
> >> to be knowledgeable about "radio."
> >
> >I AM knowledgeable about "radio".
>

> Only AMATEUR radio.

Hot diggity dang, Lennie!

Ya think that maybe that's why I participate in an AMATEUR radio
forum...?!?!

> Non-commercial, recreational, hobby activity radio. That is all.

However I HAVE discussed those VERY things in this forum. And
with knowledge AND experience!

By the way...YOU, Mr "Radio Professional", have repeatedly
insisted that there are radio services established strictly for
"recreational" purposes, yet there's not a single bit of substantiating
evidence in >>ANY<< FCC rule or regulation. We've been waiting for you
to cite the federal rule that supports your assertions.

It's only been four years. Can we expect an answer soon?

That IS a "radio" policy issue.

> However, the physics of electromagnetism
> works the same for ALL radio services, is not changed by various
> human legislation dictating certain "services" are for certain
> applications.

No one in this forum EXCEPT you has argued made any assertion
otherwise, Lennie.

> >I am the owner/operator of a federally licensed radio station.
>
> Someone else has to nominate you for the "Who's Who" in the
> radio industry.

Not necessary. Anyone who cares to validate my assertion may
refer to FCC archives. The SAME archives in which you are NOT recorded
as being a station licensee in. (A STATION license being an FCC mandate
in order for your "commercial operator's license" to be effective
with...otherwise it's just one of the same "federal merit badges" you
often refer to....)

> >> >Oh, I KNOW what temperatures methane liquifies at.

With as many times as you've made a public spectacle of yourself
with your head up your...uhhh..."backdoor", I'd think you'd have first
hand experience in that!

It's one of the things no one would argue with you about!

> Irrelevant insofar as radio is concerned.
>
> Note: This newsgroup is about amateur radio policy, not personal
> internal medical conditions.

Absolutely! Lennie, I am BEGINNING to think that MAYBE you are
starting to get the idea of what this forum really is about!

And to prove it, I am going to SAVE this post to my "favorites"
file...and EVERY TIME "Lenover21" or any of your other manifestations
deviates from AMATEUR RADIO POLICY, I am going to use YOUR words to get
YOU back on track!

> >I may be crude and unrelenting in my exchanges with you, but I am
> >not a liar, and at the end of the day, it's all about character.
>

DANG LENNIE! You ARE getting it! And I am ESPECIALLY going to
re-use THAT paragraph EVERYTIME you start to slide off into yet another
of your "Feldwebel", "Nun of the Above", "Coslonaut", "Department of
Hate", etc rants!

Thanks!

> >> Tell us again how your warm, witty, and civil manner attracts

> More bragging without qualification of the numbers or activity.

Unlike you, Lennie, I have no need of doing that.

Your ENTIRE existence in RRAP has been about trying to dazzle us
with your "Been There-Done That" bragging of your own.

We've asked you to provide the name of ONE PERSON who is, this
day, involved in radio communication in ANY phase because of some
guidance you have provided.

So far...A big GOOSE EGG.

> >> Tell us again of your vast experience in the aerospace industry

> than attempting yet another personal insult...which falls
flat...again.

Sorry Lennie.

Not true.

Your "contract" in Pennsylvania was your undoing as a newsgroup
guru-wannabe.

It's no "personal insult". You were in Pennsylvania. You named
places and dates. I have friends who were in those places during those
dates. One of them knew you. He was less than impressed. He is now
retired from that facility. He DOES have a doctorate in engineering,
and needless to say, I trust his opinions far more than I trust your
"facts".

You shouldn't have let your ego overrun your common sense,
Lennie...

Sorry it spoiled your self-inflated image of yourself, but it
appears that it's not that difficult to do.

> >> Tell us again of how you can simply pick up a telephone and

Just one more opportunity to ask you to provide proof of your
assertions, but it will go unanswered and unsubstantiated.

> >A pathological liar of monumental proportions. A putz for all
> >times.
>
> Tsk. Another personal claim of greatness for yourself.

No.

Yet another moment where we're left wondering what ever happened
to you that made you such a vile, spiteful and empty shell of a person,
Lennie.

> LenAndeson@ieee.org
> LenAnderson@ieee.org

Liked seeing it so much you had to do it twice, Lennie...???
Not that we're surprised.

I forgot to add:

Your wife very well MAY hold some valid diploma from some
respected educational institution. She may even hold (or held)
licensure as a mental health care worker.

The PROBLEM is that YOU have been caught in SO MANY LIES, over and

This legal analysis from the "jailhouse lawyer" who described his
diatribes as "broadcasts." Let's just move on to another subject.

Len,

Who are you addressing as "Nun of the Above"? Can't be me.
If you're pulling any body part, it isn't mine and it isn't

a leg.

You simply made a mistake about 97.21(b). Plain as day.
You've repeated it a few times, but you're still mistaken.

> [androgynous behavior makes

Yes, Len, one would think you'd know something that basic about
Part 97. But not only are you spouting mistakes, you refuse to
acknowledge them.

> >What is most interesting is the fact that someone like
> >Len, who has told us how the regulations should be

> seemingly unaware of solid-state technology having overtaken
> vacuum-state some three decades prior.

Well, you're obviously not talking about me, because I've never
said any of my homebrew ham radio projects are "state of the art".

Perhaps you're talking about yourself? No, that can't be it, because
you don't have any homebrew amateur radio projects to show us at all.

In fact, I recall that you had to *buy* a manufactured cb set back
in 1958 or so, despite all your alleged knowledge of
"radio-electronics".

> The Nun of the Above

Who would that be?

> has constantly made his

"his"? Nuns are female.

> old-time radio
> heroes to be pioneers of "firsts" despite absolutely NO radio
> broadcasting transmitter copying the AM adaptation of Reggie
> Fessenden done in public demonstration on 1906 (special
> carbon microphone in series with antenna lead of spark trans-
> mitter).

What are you talking about, Len?

Perhaps you should look up how Fessenden did the 1906 broadcast.
He used an RF alternator, IIRC, not spark.

But you've made so many mistakes about RAF that no one is
surprised when you make another.

> Yet the Nun wishes to rap all knuckles with his/her/it

Nuns are female, Len.

> ruler when such pioneering radio heroism isn't met with
> enthusiastic acclaim.

Well, that leaves me out. I'm against violence, both against
children and those who act like children...

> The Nun of the Above

Who?

> constantly refers to old regulations,
> including those made by government radio regulating agencies
> which no longer existed after 1934.

Which old regulations, Len?

The only regulations I've referred to recently are current ones.
Like 97.21(b). Do you know that one?

> The Nun also applies
> his/her/it's ruler to knuckles which do not recognize his/her/it's
> truism that morse code testing is a "necessity" for all new
> amateur licensees' privileges of operating below 30 MHz on
> amateur radio bands.

Well, whoever this mythical Nun person is, she's right about that!
Until FCC changes the rules, a Morse Code test is a necessity for
all new amateur licensees who want transmitting privileges on the
amateur bands below 30 MHz. FCC won't issue the license without
such a test being passed, and a license is a necessity for *legal*
operation.

Of course, Len, you have no such license. Nor are you particularly
familiar with Part 97.

> All simply MUST do so...as it has always
> been done...no good reasons given.

Operating within the law isn't a good reason?
>
> That striking ruler is again applied whenever an NCTA dares to
> question his/her/it's

Nuns are female, Len.

> claims of the efficacy of morse code mode
> over and above all other modes (which it isn't, but that is
besides
> the point to any PCTA).

Who has claimed that? Not me.

> The Nun of the Above is an ultra-strict literalist who is unable
to
> find a life beyond the newsgroup nor employment in radio-related
> industry and disavowing any relationship to professionalism in
> the radio-electronics industry.

Nuns are employed by the church. I'm not, so you can't be talking about
me.

> Must be some sort of Catholic thing.

Most but not all nuns in the USA are Roman Catholic. Even though I was
brought up in that religion, I'm not part of it now. Nor for a long
long time.

OTOH, your buddy Brian Burke, N0IMD, was raised Roman Catholic and
probably still is. Is he the one you refer to as "Nun of the Above",
Len?

btw, he might like to hear about who you voted for in the 2004 US presidential election.

> What's troubling all these
> heavenly fodders is lots and lots of individuals nailing theses

"Theses"? I think you meant a word that rhymes with "theses", Len, only it begins with the letter F.

"lots and lots of individuals"? How many?

How many think differently?

> on
> the doors of the Church of St. Hiram saying that morse code
> testing must GO and make the "church" open to all citizens who
> have an interest

Perhaps it would be better if people with an interest in changing the rules approached the FCC about it.

Amateur radio is open to all who have enough interest to pass the required tests and get the required license. You obviously aren't one of those people.

> ...an interest and not a desire to dumb themselves
> down with old, archaic requirements that have no usefulness.

Like what "old, archaic requirements"? Written tests? Licenses?

You can't be talking about Morse Code skill as having no usefulness, because it's extremely useful in amateur radio. Therefore, it makes sense that the tests for an amateur radio license would include a Morse Code test.

QED

> Ave, Imperator!

Who do you address that way? Nuns are usually addressed as "Sister" or "Mother" or some other title. At least that's the way it was back when I was Roman Catholic, years and years ago.

As for the Latin, it's one of the languages my ancestors used. They had world-class poetry, art, drama, philosophy, mathematics, formal logic, science, engineering, architecture, public works, a representative form of government, etc. Much of what they accomplished we still use today - even down to most of the alphabet used to write in this newsgroup.

At about the same time in history, *your* ancestors were busy painting their faces blue, howling at the moon and worshipping trees. All they gave us of any value was the names of some of the days of the week.

I hadn't thought of the word "buffoon" for her, Kim, but
it fits perfectly.

I've seen it written that what LS wants to be is the scolding
parent who says 'do as I say, not as I do'. Her own life is no
example you'd want to hold up. Besides the fooling around with
a married man in the workplace (a la Ms. Lewinsky), there are
those clothing-less photos which she at first claimed were
fake but then had to later admit were real. Some might forgive
those things as youthful indiscretions, but LS doesn't forgive
the youthful indiscretions of others!

Then there's the fake "guests" on her short-lived TV show, the
preaching that moms must not have jobs and always have the
choice to stay home with their kids (but she didn't!)

You probably know many more.

73 de Jim, N2EY

btw, check this out and see if you can guess the author. I thought
you'd get a kick out of it, particularly the "big house" line.

Hint: It was written in 1991.

"Democracy is buying a big house you can't afford with money you don't
have to impress people you wish were dead. And, unlike communism,
democracy does not mean having just one ineffective political party; it
means having two ineffective political parties. ... Democracy is
welcoming people from other lands, and giving them something to hold
onto -- usually a mop or a leaf blower. It means that with proper
timing and scrupulous bookkeeping, anyone can die owing the government
a huge amount of money. ... Democracy means free television, not good

television, but free. ... And finally, democracy is the eagle on the back of a dollar bill, with 13 arrows in one claw, 13 leaves on a branch, 13 tail feathers, and 13 stars over its head -- this signifies that when the white man came to this country, it was bad luck for the Indians, bad luck for the trees, bad luck for the wildlife, and lights out for the American eagle."

Thank you!

Mine roughly translates to: "When worn out at the front and worn out at the back, make a new one". It was the 'aku-aku' ('guardian spirit', roughly) of a book that had been recopied many times on Easter Island, passed down through many generations.

Imagine the ingenuity of the book's unknown ancient author, to put in that saying so the information would survive.

Todd, I'd be careful if I were you. You must remember that even if you are "technically" correct, If and whan they decide to cast their light upon you, it's all open to interpretation. In the final analysis, their interpretation will be the only one that counts. You might want to tread a tad more carefully.

I hold no opinion as to the correctness of your activities. I just believe that you're playing *against* the home team and there's lotsa cork in those bats.

Source record: 102406

Where in the FCC rules and regulations does it state that it has to be a news bulletin? I think that's where Amateurs have a misunderstanding. The term in the FCC rules and regulations state:

97.3(a)(25) Information bulletin. A message directed only to amateur operators consisting solely of subject matter of direct interest to the amateur service.

And you must also look at

97.111(b)(6) Transmissions necessary to disseminate information bulletins;

Let look at the bottom one first. "Transmissions necessary to disseminate information bulletins" now we all know what transmission means at lease I hope you all do so lets look at the ending section of that part "disseminate information bulletins". Disseminate according to The American Heritage Dictionary disseminate means to spread or to be spread. Information according to the same dictionary means "Knowledge from study or experience. (2)Knowledge of an event or situation; Intelligence. (3) A collection of facts or data (4) Informing or being informed; communication of Knowledge. Lastly a bulletin is according to American Heritage Dictonary is (1) A printed or broadcast statement on a matter of public interest (2) A periodical, esp. one published by an organization or society
So with all we can state that 97.111(b)(6) means in layman term A radio siganal necessary to spread knowledge as a statement on matters of amateur interest something on that lines no where in the FCC rules and regulations does it state it has to be NEWS only that it has to be information consisting solely of subject matter of direct interest to the amateur service. After reading stuff off of not only this newsgroup but other amateur message boards I understand that many amateur's think that a information bulletin is a news bulletin but again nowhere in the FCC rules does it state that.

My uncle was a ham operator back in Romania. He moved here in the United States about 15 years ago. He kept his ham licence active for all this years YO6DMY. He wants to start operating again. Does he need to retake the ham exam??? Can he just do a change of address?? Any help would be appreciated. Thank you...

He would have to take a U.S. ham license test to get a U.S. license
if he is now a U.S. citizen or resident. Reciprocity or its CEPT
equivalent would not apply because he is not in the U.S. temporarily.

>Can he just do a change of address??

Most Administrations require an "in country" address.

Good News!

Do you know how simple it is to go to Heaven after this life has ended?

Some people believe that belonging to a local church, temple, mosque or synagogue will get them to Heaven.

Others believe that water baptism, obeying the ten commandments or just being a good person will get them to Heaven.

There are many other beliefs as well, but the good news about God's way to Heaven is found in the Holy Bible.

The good news is that God came from Heaven to earth in the person of Jesus Christ over 2000 years ago and died for our sins(misdeeds). He was born in the land of Israel supernaturally to a virgin Jewish woman named Mary. He lived a sinless life for thirty-three years and then sacrificed His sinless blood and died on a cross to pay the death penalty for our sins. After Jesus was placed in a tomb He rose from the dead three days later as He said He would. The Holy Bible also tells us that Jesus Christ ascended into Heaven and that all who accept Him as their Lord and Saviour will live forever with Him in Heaven where there is no more death, sorrow, sickness and pain.

The Bible says, "For the wages of sin is death, but the gift of God is eternal life through Christ Jesus our Lord." (Romans 6:23)

This verse in the Bible says, "For ALL HAVE SINNED, and come short of the glory of God." (Romans 3:23)

This verse says, "But God demonstrates his own love for us in this: While we were still sinners, Christ died for us." (Romans 5:8)

In this passage the Bible clearly explains how simple it is to be saved and on your way to Heaven, "For if you confess with your mouth, "Jesus is Lord," and believe in your heart that God raised him from the dead, you WILL BE SAVED." (Romans 10:9)

You can be saved right now and on your way to Heaven if you will open your heart to Jesus and pray the following prayer:

Dear Jesus Christ, I want to be saved so that I can have a home in Heaven when I die. I agree with You that I am a sinner.
I believe You love me and want to save me. I believe that You bled and died on the cross to pay the penalty for my sins. I believe that You rose from the dead. Please forgive my sins and come into my heart and be my Lord and Saviour. Thank You Lord Jesus Christ for forgiving me and saving me through Your merciful grace. Amen.

You are now a Christian if you said the prayer and allowed God to save you. Welcome to the family of God.

Salvation is not a reward but a gift. The Bible says it this way, "For it is by GRACE you have been SAVED, through FAITH and this not from yourselves, it is the GIFT of God." (Ephesians 2:8)

Nothing in the world is more important than your eternal destiny.

The Bible says, "In Him(Jesus) we have redemption through His blood, the forgiveness of sins..." (Ephesians 1:7)

If you have not yet made a decision to be saved, please do so now before it is too late. The reason why it is so important to be saved now is because you do not know exactly when you will die. You may die prematurely in a traffic accident, terrorist attack or some other way before you get another chance to be saved.

The Bible tells us that we will spend eternity in Heaven or a place of eternal torment called Hell. It would be terrible to die and go to Hell when all you have to do is accept Jesus Christ as your personal Lord and Saviour.

Some people that have already made Jesus Christ their Lord and Saviour worry about losing their salvation. The Bible teaches Christians that we can never lose our salvation no matter what happens.

The Bible says it this way, "My dear children, I write this to you so that you will not sin. But if anybody does sin, we have one who speaks to the Father in our defense Jesus Christ, the Righteous One."

Yes my friend, Jesus Christ is able to save you and keep you saved.

Please tell your family and friends, thanks!

Have a great day!

It took a heck of a long time and a lot of paper to get those tapes right.
Remember how we used to roll them around the fingers? Then hang them on a
peg on the wall? Yep.....dang I've been around a while.

And then the only source was Telex tapes, then that went to glass and the supplies dried up. Then the prepunched papers got brittle and broke and we didn't have them backed up on cassette tape (remember that?)

I still have a few pictures in a scrapbook. The only way to reproduce them these days would be to photograph them, and I should do that before they expire too. I shed a tear the day my 60 year old antique Model 15, 14 Typing Reperf and 15TD went to the tip.

I'll try to put it into words that hopefully even you can understand.
The spirit of the rule means that the one-way transmissions on the
amateur bands should contain bulletins or information pertaining to
amateur radio and directed only to amateur radio operators and the
subject matter should be that which is of interest to the amateur radio
service. My, that is almost exactly what the rule itself says.
Now quit trying to be a self taught lawyer, you are proving you are very
poor at it. It really doesn't matter how you interpet the rules, what
matters is how the FCC interperts them and if they interpert them

differently than you do, that's your problem.

More like: A used-to-be virgin Jewish woman named Mary slipped up and forgot what time fo the month it was while fooling around with Joseph's best friend or some other willing male friend.

Mother Nature then went to work.

When faced with the prospect of telling her as-of-yet unconsumated fiancee of her plight, she takes advantage of his pious and unwavering devotion to God to convince him that she is still a virgin and that this pregnancy is an "act of God".

I find this a lot easier to believe than the idea that an omnipotent God, able to know what is going to happen in the future, "gives" his Son to an ignorant peasant girl in an era when the "facts" will be documented haphazardly at best, and allowed to be subject to the interpretations and manipulations of over 20 centuries of "prophets", "priests", "evangelists", "clerics", "rabbis", etc etc etc.

Almost ever major conflict on the face of this planet has been over the deulling ideologies of "ministers of the faith", all of whom teach the same basic tenents: compassion, tolerance, faith, love, understnding, etc...UNLESS, of course, the other guy who is teaching the SAME stuff lives "over there", in which case he OBVIOUSLY is a heathen, wants to murder your brother, rape your sister and steal your land, and should be immediately disposed of.
Good news? Yeah...right.

Steve

Hi Burt,

You know the easiest way of solving this problem which I'm working on, is a petition for rulemaking to clarify what a Information bulletin is. That would solve the problem once and for all

?? I have no idea..

I thought it was an interesting look at how much some cultural things have changed in 40 years or so. Back when gender roles were much more rigidly and clearly defined, and we were told technology could do no wrong.

Who are you addressing as "Nun of the Above"? Len?

> That's "far," not 'fur.'

> How is all of that justification for anything in AMATEUR RADIO
> POLICY matters?

You sound just like "Dr." Laura, Len. You two really do have a lot in
common.

> Broadcasting is NOT allowed in amateur radio (except for special
> dispensation to the Church of St. Hiram and W1AW).

What W1AW transmits is not broadcasting. And there's no special
dispensation - any amateur radio station that meets the requirements of
Part 97 can do the same or similar transmissions.

But you're not very familiar with Part 97, Len. Particularly 97.21(b)..

> Child-raising is a major topic in amateur radio policy matters?

When someone who has no children demands that FCC not issue amateur
radio licenses to anyone under the age of 14 years, yes.

> It must be. Two self-righteous PCTA extras are talking about it
> as if they were pediatricians of long experience in working with
> all kinds of children.

Laura Schlessinger isn't a pediatrician, nor a child psychologist.
Neither are you, Len.

She is, however, a parent. You aren't.

> Either that or they are self-righteously
> talking down to others as if those others are all "children."

No, that's best left to you and "Dr." Laura.

> >>The strange thing is that she has not learned the lesson that

Yes, Len. There are some hams who think that if Howard Stern can
behave a certain way on the air, so can they, not realizing the
rules are different.

> Remarkable waste of space in here.

You post more non-amateur-radio-policy verbiage here than anyone else,
Len. And unlike Laura Schlessinger, you can't cut off dissenting
voices.

But it does take some brains to read the rules and know what they mean,
unfortunately that leaves you out.
Your sentence should read, "it "doesn't" take a rocket....." The word
"doesn't" is the contraction for "does not", "don't" is the contraction
for "do not". I wouldn't banter around anything about someone's IQ if I
were you, as you cannot even use correct grammer.

This distinction between "information" and "opinion" is not the same argument as the distinction between "information bulletin" and "broadcast."

We can generally agree that the most common approved use of amateur radio frequencies is one-to-one "transmissions" between hams. A "broadcast" is one-to-many, intended for the general public. The distinction made by the FCC is that "information bulletins," although one-to-many, are intended to be of interest to amateur radio operators.

If the FCC makes a distinction between "information" and "opinion," then ARRL and Amateur Radio Newsline may in fact be outside the pale. Because it is my contention that no such dichotomy is present, I only argue amateur radio transmissions intended as one-to-many focus on items of interest to amateur radio operators, whether the content is "provable fact" or "opinion." To make a distinction between information and opinion is to exclude discussion of alternative technologies of interest to hams: "Is IRLP amateur radio?" "Should code testing remain a criteria for an amateur license?"

I was informed when I got my license of certain "no-no" topics on the air. Later, I discovered that much "no-no" is actually dictated by the repeater owner and that there is, in fact no FCC prohibition for many of those topics.

Poor little Toddyboy, now reduced to using the gutter language of jr high schoolers he spies on down at the mall where he picks up these wonderful elocutionary skills.

Post when and what frequency you will be on 20 meters and I'll be sure and give you a call and lets see if you are brave enough to use such language on the air.

"You" have Department of Defense Directives documented in
federal, state, and local records?

Tsk. The DoD has it documented. The DoD directs MARS, not
amateur radio.

>> >I have an Amateur Radio Extra Class license...You don't.
>>
>> You can pick up your Ham Hero Award at the door on your way out.

>
>No "hero award", Lennie.

You didn't even get a nice shiny Raddio Kopp badge? Tsk, tsk.

I guess you are not the one to whom that concerns. :-)

>Just one of the MANY things that I DO have that you do not...CAN
>NOT have. You talk big about a great many things, but do nothing about
>it...Except to try and make things miserable for those who DO choose to
>do "it".

"Do" what? Type snarly, slavering personal insults in a newsgroup?

"Talking BIG?" Tsk. I've already done things poor nursie hasn't.
In radio. And in electronics. For half a century.

>> If you don't see your name on the box, it is in the one labeled
>> "to whom it may concern."
>
>At least I >>AM<< concerend, Lennie.

Then talk to the medal awarders, big chief. Have your name engraved
in that shiny Raddio Kopp badge.

Better luck next year.

>You aren't.

"Aren't" what?

>> Tsk. FCC Commissioners and staff are not required to have
>> personal amateur radio licenses in order to REGULATE U.S.
>> amateur radio! [sunnuvagun!]
>
>Lennie, YOU are NOT an FCC Commissioner.

Tsk. Never said I was. :-)

Not a single FCC commissioner has to have an amateur raido license
in order to regulate U.S. amateur radio.

Sunnuvagun!

Kind of spoils your 'hood rant, donut?

>Discussing the FCC commissioners does not negate the fact that YOU
>perport to know and have experience in thse many things, yet you
>obvioulsy DON'T have the knowledge OR experience in them.

Tsk. Try "purport." Put 'purport' in your I/O port.

Nonetheless, there's NO law that says any FCC commissioner OR
staff must have an amateur radio license in order to regulate U.S.
amateur radio.

>FCC commissioners have a duty to perform. You don't.

None of their "duty" involves getting an amateur radio license in
order to regulate U.S. amateur radio!

Sunnuvagun!

>You're a big mouth.

Tsk. Does that mean the honeymoon is over? :-)

>That's all. You know a lot of little trivial things...no more.

Yeah...Ohm's Law to Maxwell's Equations, plus a lot of radio
and electronics theory which has been applied to design, test,
debug, and field operation of radio-electronic systems...not to
mention a better working knowledge of the English language
(particularly spelling). :-)

Really must get your goat to munching when I've made a fairly
nice living at knowing all those "trivial" things, donut?

>> >I have an FAA Airman's Certificate and have currency in 3 types.

>
>But not irrelevant as YOUR frequent diversions into matters of
>airmanship. Another discipline that you shoot your mouth off on and
>have no eal EXPERIENCE in. It's so obvious that everyone EXCEPT you
>sees it.

Tsk. I've never claimed "eal" experience in anything. Does that have
to do with aquatic things? "Electric eals?" [shocking...]

>> Note: This newsgroup is about amateur radio policy, not flying.
>
>True, but that never stops you from discussing NAVAIDS, aerial
>navigation, or a host of other aviation related subjects from which
>your ONLY experience is a web based search engine.

You mean like radionavigation aids such as VOR, Localizer,
Glide Slope, Marker Beacons, TACAN, and DME? Worked ON
all those plus the L-Band Transponders (in both civil and military
modes). At RCA and Teledyne Electronics (division in Newbury
Park, CA). Neither corporation has a website devoted to radio-
navigation systems as far as I know.

Gosh and golly...all those radionavigation aids work on radio
frequencies! Sunnuvagun!

>Nor is it about the US Army in 1953, aerospace, or disaster
>response, however you frequently deleve into those topics when the mood
>strikes you.

Tsk. I've worked IN U.S. Army radio communications for three years
solid back a half-century ago...main radio circuit paths on HF all

across the Pacific, Sea of Japan, and other aquatic places. Guess
that doesn't count since you didn't exist then, huh? Never did "QSL"
either since the Army didn't have any "QSL Buro" and frowned on
that sort of ham activity as part of the Army Command and
Administrative Network.

>> >I have multiple licenses as a healthcare provider.
>>
>> Irrelevant insofar as radio is concerned.
>
>But it's 100% relevent in this forum since YOU frequently bring up
>discussions on the matter. Again...just one more discipline that you
>run your obviously ill-prepared mouth off on.

I'll bet your licenses look real purty, suitable for framing and all.

Lessee...Band-Aids are a trade name for small bandages and
hams operate in ham bands. That must tie it together in your
mind, no?

>> Note: This newsgroup is about amateur radio policy, not health
>> or medicine.
>
>Here again we have Lennie TRYING to chastise others for liberties
>HE takes at will.

I haven't taken any "will" anywhere except to my safety deposit
box. Need to be an attorney or paralegal to prepare a will.

Tsk. Guess everyone just has to obey the orders of the PCTA
extras in here. [they get sooooo upset when others talk back to
their holinesses...]

>Sorry Lennie. It doesn't work that way. If it's OK for you, it
>IS "ok" for the rest of us...ESPECIALLY those of us with the
>credentials from which to make informed opinions.

Yup...Doctor Strangeglove titles hisself THE authority... :-)

Wow....."credentials!!" [I'll bet they are all put on nice plaques
hung on the walls for friends and neighbors to Ohhh and Ahhh
over...]

>> >You have none,
>> >although you somehow insinuate "experience" by virtue of sleeping
>with
>> >a person with a diploma from K-Tel, Ronco, or some other such place.
>>
>> Irrelevant insofar as radio is concerned.
>>
>> Note: This newsgroup is about amateur radio policy, not diplomas
>> or correspondence schools nor libelous personal insults alleging
>> I am "sleeping with" someone other than my wife.

>
>I didn't say you were sleeping with anyone BUT your wife.

Are you saying this newsgroup is about "infidelity?" Strange...

>What I
>AM saying is that YOU have made so many easily disproven lies in this
>forum that only the very gullible or the very very easily fooled
>believe any statement by you that your wife holds any of the
>credentials you claim she does.

Wow! I didn't know my Lamont Cranston Powers (learned while
in the Orient) were that good! Fooled a lot of government agencies
in Illinois, Wisconsin, Washington, and California! For years!

For myself, I guess I also fooled the FBI, CIA, DIA, DCAS, IRS,
and the Franchise Tax Board (of California)!

Wow! I feel so much better now! All that POWER over others!
:-)

>Furthermore, as a healthcare provider myself, I have to question
>her competence and credibility if, as you have claimed she does, she
>reads any of what you post in here. To allow a person she supposedly
>loves to act this way in public, let alone as a credentialed mental
>health provider, is unthinkable.

Tsk. Call the "authorities." Have us both "picked up" and
committed!

>> >> You've never acknowledged that the Department of Defense
>> >> directs MARS.
>> >
>> >Sure I have. Several times over. You keep ignoring it.
>>
>> There is nothing to ignore. You have not acknowledged that
>> the Department of Defense directs the Military Affiliate Radio
>> System. You keep insisting that "amateurs are MARS."
>
>That's NOT what I said, but we've already gone over that.

Tsk. Quote: "Sorry Hans, MARS >>IS<< amateur radio."

Does Google lie? :-)

>> >> You've never acknowledged the when and where of those
>> >> "seven hostile actions."
>> >
>> >They were and are none of your business.
>>
>> In other words, those do not exist. LYING. Braggadoccio.
>

>Not lies. None of your business.

Ah! They are "secret ops?" Sensitive information? Classified?

No medals for that? Not even an Intelligence Star? Tsk.

The newsgroup's unsung Hero...must be terrible to go through all
that and not be acknowledged the big Hero you are...

>> >They exceed YOUR "hostile actions" by seven.
>>
>> Impossible. You cannot use imaginary incidents to claim any sort
>> of "superiority" in anything.
>
>I never claimed "superiority" over anything, Lennie.

Now, now...all PCTA extras have claimed "superiority" according
to the heavenly fodder.

Gosh. If you are not "superior," then you must be "inferior!"

Sunnuvagun!

>That's a mindset YOU have established in order to justify your
>positioning yourself as the noble defender. You are neither "noble" or
>"defending" anything. You are no one's advocate save your own despite
>your self-indulged delusion otherwise.

Tsk. Never claimed to be a "noble defender." Never been the
defendant in a court either (been a witness once but that doesn't
count). This newsgroup is not a "court" except a lot of folks who've
been admitted to A bar want to make it "moot court." [as a real
attorney what that means]

Tsk, tsk. I've no delusions about HF radio communications. Been
IN it, done the work, have the documentation AND personal witnesses
(all still living). Never once used morse code or had to know morse
code for legal radio transmissions on HF since.

>> >> You've never acknowledged that the University of Illinois is
>> >> NOT a correspondence school.
>> >
>> >The University of Illinois does have extension courses.
>>
>> That may be (haven't checked their syllabi).
>
>Of course you haven't, Lennie! We'd expect nothing more from you!
>And "syllabi" is not where you ant to look. The catalog is.

So...you classify "extension courses" as "correspondence courses"
still? You think a Masters Degree is that easy to obtain? Tsk.

>> Nonetheless, my
>> wife earned TWO Masters Degrees from the University of Illinois

>> at Urbana, attending formal classes ("formal class" refers to being
>> present IN class).
>
>"In residence" means being "IN" class.
>
>> She was aided in that with formal classes at
>> the University of Wisconsin at Madison.
>
>You CLAIM she has those credentials.

Yup. Documentation is in state records of Illinois and Washington.
Paperwork is in storage in the northern house (includes the
framed Degree certificates).

>I say if she did, and she
>has the experience you alledge her to have, she'd smack you upside the
>head and forbid you from acting this way in public.

Heeeeeee. She got a good laugh out of your comment.

>She obviously hasn't, so you were either lying about her awareness
>of your conduct in this forum or you were lying about her education and
>experience. In either care, you WERE (are) lying.

Poor nursie...everyone who talks back to him/her is "lying."

Do your DUTY as a healthcare professional...pick up that phone
and order the authorities to come pick us up and have us
committed!!!

>> Irrelevant insofar as radio is concerned.
>
>Right again, but you DO go right on bringing it up. Why is that?
>
>> Note: This newsgroup is about amateur radio policy, not colleges
>> or universities nor postgraduate studies.
>
>Then why do YOU keep brining them up, Lennie...?!?! No one here,
>least of all me, ever cared about where your wife went to school or
>what street corner you found her on.

I "found my wife on a street corner?" Tsk, tsk, tsk.

You should ascribe your personal experiences to everyone else...

>I have NEVER "derided" SINCGARS, Lennie.

Tsk. You didn't even know about it. :-)

The most-produced radio system in the U.S. military, a quarter
million (approximate) sets produced and made operational since
1989.

>I have said they are not relevent to Amateur Radio.

The AN/PRC-119 family operates in the 30 to 88 MHz frequency
range. Uses some modulation and modes not allocated to U.S.
amateurs. Nonetheless it IS a radio.

>And the claims of "classified" and being "unable to discuss" were
>YOUR defenses when asked about your alleged "part time" works as an
>"engineer". (I can't even say that without losing my composure and
>laughing!)

Poor baby...lose control easily off the newsgroup, too?

>However YOUR "reserve" duty was NOT active reserves. You were
>still under a formal obligation to return to active duty if called,
>however you were not in uniform, you were not standing watches, and you
>CERTAINLY were not anywhere near being in harms way. (You weren't even
>there when you WERE on acitve duty!)

I wear a watch. Never stood on one (would break if I did).

Army doesn't "stand watches." I remember some nice ones in a PX
in a neat display case of watches, though.

>But LENNIE! YOU are the one who is constantly insisting that I
>don't have any "working" knowledge of Yiddish just becasue I call you a
>(very well deserved) putz.

Shalom, goyim.

>I dare say there are tousands of words YOU use from other
>languages without having a "working knowledge" of the language from
>which they spring.

"Tousands?" Is that like "bilons and bilons?" :-)

>For PRIME example, just how much LATIN do you actually speak?

When I convert to Catholicsm, I'll let you know. :-)

>Whole, meaningingful sentences now...Not just snappy phrases you like
>to tack onto your RRAP posts in order to LOOK educated.

"Tack?" Don't even use carpet tacks anymore. Isn't "tack" also a
nautical term involving steering of a boat?

>Ahhhhhhh....I see!
>
>Yet another nail hit on the head that Lennie wished to get out
>from under! Shall I save this post from which to use as retort for
>your future suggestions of linguistic incompetence?

"Nail?" You were speaking of "tacks." Please use better focus.

You aren't hammering home any point there...

>Anyone who was paying attention to why I left NURSING for a while
>in 2000 understands perfectly. I bet Brian Burke can explain it to
>you, Lennie.

>
>I LEFT Atlanta to go back to Nursing. It really is THAT simple.

Of course you did. Uh huh. "Nothing else" involved, ey?

>> Note: This newsgroup is about amateur radio policy, not human
>> resources or industry employment practices.
>
>Then why do YOU keep bringing it up, Lennie...?!?! I don't.

Tsk. Okay, you couldn't hack it as a purchasing agent in an
electronics company that "rents servers from Antec." Boo hoo.

>You're right again! Yet YOU keep bringing up your alleged
>aerospace contractors and retirement packages! NONE of which (except
>in YOUR mind as the mood strikes) are pertinent to AMATEUR RADIO.

"Alleged?" "Retirement packages?" I've never alleged any
employment, just stated those employers I'd actually worked for.
My "Retirement package" from industry was exactly one, now
ended with a lump sum payment...the rest was my own personal
planning.

Ahhh...you are angry that some of us ARE retired but YOU must
keep on working! If you suffer, all must suffer! You are the center
of the universe?

>So, Lennie...How did you go from making inappropriate suggestions
>of where/how I became an aviator to discussing the entry of SINCGARS to
>military service...???

Gee...you ought to digitize your Command Pilot wings and glorify
yourself as "Pilot in Command" on a website!

You became an AVIATOR! Wow! You need a good script to make
a movie from! [maybe Leonardo diCaprio could star in a sequel?]

>Are you going to acknowledge your error or not?

"Acknowledge my error?" :-) :-) :-)

>Ya think that maybe that's why I participate in an AMATEUR radio
>forum...?!?!

Is it? I thought you were just venting and venting and venting to
get over your daily frustrations at not being more than you are.

>By the way...YOU, Mr "Radio Professional", have repeatedly
>insisted that there are radio services established strictly for
>"recreational" purposes, yet there's not a single bit of substantiating
>evidence in >>ANY<< FCC rule or regulation. We've been waiting for you
>to cite the federal rule that supports your assertions.

Tsk. You can find them in Part 95, Title 47 Code of Federal
Regulations.

Tsk, tsk. I've mentioned that Part many times in here, in public.

>> Note: This newsgroup is about amateur radio policy, not
>chemistry.
>
>Again correct! However YOU frequently make posts suggestive of
>relevence in chemistry, yet it's OK for YOU to do!

Tsk. I didn't start this thread involving unmanned spacecraft.

Temperature of electronic components has a definite bearing on
components' performance.

>Your ENTIRE existence in RRAP has been about trying to dazzle us
>with your "Been There-Done That" bragging of your own.

Poor baby...still pissed to an extreme point that anyone has done
anything better than you...

>We've asked you to provide the name of ONE PERSON who is, this
>day, involved in radio communication in ANY phase because of some
>guidance you have provided.

>Your "contract" in Pennsylvania was your undoing as a newsgroup
>guru-wannabe.

Tsk. I've never had a "contract" of any kind of employment in
Pennsylvania.

>It's no "personal insult". You were in Pennsylvania. You named
>places and dates. I have friends who were in those places during those
>dates.

Ah, you have at least two friends! Amazing.

>One of them knew you.

Doubtful. You've not identified that person. You've not identified
where that fictitious person worked within that "facility." You
simply fabricated a statement out of your fevered imagination.
In other, pithier words, bullshit.

>Yet another moment where we're left wondering what ever happened
>to you that made you such a vile, spiteful and empty shell of a person,
>Lennie.

Wow...you are really working up a head of steam, Doctor
Strangeglove. Now get a large towel and wipe the froth from
your lips, keyboard, and uniform shirt front. That's a good boy...

By the way, as you were corrected by another, the Titan
lander probe was named "Huygens," not "Cassini." Try to
remember that some time.

Opinion: A belief or conclusion held with confinfidence but not substantiated by proof (2) A judgement based on special KNOWLEDGE (3) A judgement or estimation

Again nowhere in the FCC rules and regulations does it state that amateur's can not be opinionated. The rules state the"information bulletin" has to be of interest to the amateur radio community. I know amateur who run progams on ATV about what antenna are the best to uses at what frequency....that's also an opinion too. The reason there is no statement about no opinions on the amateur band is as I stated before your getting into both a First Amendment issue and content control issue which the FCC can't regulate under Section 326. I've read on both on here and on other message board and it seem that there is a HUGE misunderstanding of what an information bulletin is and until there is a official statement by the FCC to where ALL amateur's get the message this problem will never be solved.

well like I stated untill the FCC makes a ruling on the matter where every amateur gets the message this problem will never be solved. As for playing lawyer it don't take a rocket scientist to read the rules. It's not my fault your IQ is that of a 5th grader and you can't fucking read. Put Hollingsworth dick or it that stupid fat fuck Phil Kane dick back in your mouth and shut the hell up you whiney little bitchwhore! As for interpretation of the rules as Hollingsworth stated in a letter to K1MAN " The rules of the Amateur Service are straightforward and easy to understand" (From Re: Amateur radio licenseK1MAN to Glenn Baxter K1MAN from Riley Hollingsworth January 29, 2002) (complete letter at http://www.arrl.org/news/enforcement_logs/2002/0209.html)

>sense that the tests for an amateur radio license would include a
>Morse Code test.

Tsk. That only "makes sense" to a PCTA extra. :-)

QED

"Quad-Error Demonstration?" Tsk. You made two basic errors
one involving an impossible logical relation.

> Ave, Imperator!

>Who do you address that way?

All the PCTA extras? Isn't that their salutation? :-)

>Nuns are usually addressed as "Sister"
>or "Mother" or some other title. At least that's the way it was
>back when I was Roman Catholic, years and years ago.

You are a lapsed Catholic?

Oh, yes...you changed denominations and took your Vows
with the Church of St. Hiram!

Sorry, I forgot. :-)

>As for the Latin, it's one of the languages my ancestors used.
>They had world-class poetry, art, drama, philosophy, mathematics,
>formal logic, science, engineering, architecture, public works, a
>representative form of government, etc. Much of what they accomplished
>we still use today - even down to most of the alphabet used to write in
>this newsgroup.

Tsk. They couldn't hold their Empire together, could they? :-)

Got defeated by their own inflexibility and a bunch of barbarians.
Tsk, tsk.

Well, the electronics industry usually acknowledges Guglielmo
Marconi as the first demonstrator of radio as a communications
medium. In 1896. He used morse code with on-off keying. Old
timers seem intent on keeping morsemanship testing well-alive
past 108 years. :-)

Same-o, same-o...those olde-tymers have the same inflexibility
and are being defeated by "barbarians" who've gone on to bigger
and better things in the world of radio.

>At about the same time in history, *your* ancestors were busy painting
>their faces blue, howling at the moon and worshipping trees. All they
>gave us of any value was the names of some of the days of the week.

"My" ancestors? :-)

Who were "my" ancestors? :-)

"My" ancestors went around "painting their faces blue?" :-)

Jimmie (aka "Nun of the Above"), do everyone a favor: Quit singing
the blues. You are off-key and you keep taking sideswipes with
your bug-gy comments about "ancestry." You gonna get paddled.
Probably in iambic pentameter verse. [what could be "verse?" vell,
lotsa tings...:-)]

Just turn blue.

> Sunnuvagun!
>
> Kind of spoils your 'hood rant, donut?

The only "rant" ruined, Lennie, it the one wherein YOU foolishly
attempt to redirect posts when caught in a corner.

You are not an FCC commissioner. You have no experience from
which to make INFORMED opinions on matters of Amateur Radio policy.

Te Commissioners and the 600K+ licensed Amateurs do.

> >Discussing the FCC commissioners does not negate the fact that YOU
> >perport to know and have experience in thse many things, yet you

You still have not made the linkage between the FCC commissioners
and you.

> >You're a big mouth.
>
> Tsk. Does that mean the honeymoon is over?

What kind of a low life would marry you, Lennie?

> >That's all. You know a lot of little trivial things...no more.

>
> Really must get your goat to munching when I've made a fairly
> nice living at knowing all those "trivial" things, donut?

So far we've seen nothing that indicates YOU know these things.

The extent of your "knowledge" seems to stop at the end of your
mouse cord, Lennie.

And as for your "spelling" skills, you still manage to make a
handful of typos, and usually the same ones over and over.

You also demonstrate a LACK of skill in the English language,
especially communications issues. This is quite evident because you've
been asked the same questions by numerous posters over and over yet you
refuse to answer the questions.

Personally, I think it's because you simply don't understand the
questions. THAT stems from your being an idiot.

have
> to do with aquatic things? "Electric eals?" [shocking...]

The ONLY thing shocking in the Anderson home, I am sure.

The "r" I dropped notwithstanding, the context stands. You've
attempted to represent yourself as being knowledgeable about aerial
navigation.

You are neither a licensed aviator or navigator.

> >> Note: This newsgroup is about amateur radio policy, not
flying.
> >

They sure do.

And you've tried (and failed) to "teach" us about how they are
employed.

> >Nor is it about the US Army in 1953, aerospace, or disaster

> Administrative Network.

Geeze, Lennie. While I was on Okinawa in 80, 81, 89 and 90,
various MARS stations on the Island received SWL requests, and I
answered every one of them.

We were using a lot LESS than the multi-kilowatt signals you
purported to using from ADA.

Wassamatta...?!?!? ADA couldn't be heard with all that
power...?!?!

Sheesh!

> >> >I have multiple licenses as a healthcare provider.

plaques
> hung on the walls for friends and neighbors to Ohhh and Ahhh
> over...]

My "credentials" are in the lives I have touched and made better,
Lennie.

I don't need (although I DO have) plaques for the wall. The
neighbors "oooh" and ahhh" from the positive impacts I made on them and
their families.

I am saying it's highly unlikely that anyone with the credentials
and education you suggest your "wife" has would marry an idiot like
you...(or at least STAY married to an idiot like you...)

> >What I
> >AM saying is that YOU have made so many easily disproven lies in

agencies
> in Illinois, Wisconsin, Washington, and California! For years!

Yes...You did.

I notice you left Pennsylvania off your list.

THAT is because the folks in Pennsylvania got wise to Lennie
Anderson and sent him packing. Perhaps you learned your lesson after
that, but I doubt it.

> For myself, I guess I also fooled the FBI, CIA, DIA, DCAS, IRS,
> and the Franchise Tax Board (of California)!

No doubt you have. And having filed income tax returns on your
"earnings" doesn't validate your claims of proficiency at your
"craft"...It only means you were smart enough to not tangle with the
taxman.

Again you quote one line from 100,000 and try to make THAT an
"argument".

Everyone here EXCEPT you has figured it out, Lennie.

It DOES seem to be ALL you have to "work" with, Lennie.
Lame..REAL lame.

> >> >> You've never acknowledged the when and where of those

And not once for the Amateur Radio Service.

"Communication" on frequencies in the HF part of the spectrum does
NOT qualify you as "experienced" in AMATEUR practices.

> >> >> You've never acknowledged that the University of Illinois is

>
> So...you classify "extension courses" as "correspondence courses"
> still? You think a Masters Degree is that easy to obtain? Tsk.

An "extension course" >>IS<< a "correspondence course".

A Master's degree is ANYthing but easy.

But I do not believe that anyone in your household holds one,
ESPECIALLY in any discipline of mental health or social affairs.

> >> Nonetheless, my
> >> wife earned TWO Masters Degrees from the University of Illinois

And we don't have Mrs. Lennie's full name with which to make the
inquiries to determine the validity of your assertions.

As for the records being in the "northern house", that's the "/T5
Logs" defense...Kinda like the Twinkie Defense, but without the
Twinkie.

> >I say if she did, and she

She probably gets a good laugh from a bottle of Geritol, Lennie.
Needs a lot of it, being married to a well known and archived liar like
you, no doubt.

> >She obviously hasn't, so you were either lying about her awareness
> >of your conduct in this forum or you were lying about her education
and
> >experience. In either care, you WERE (are) lying.
>
> Poor nursie...everyone who talks back to him/her is "lying."

There's no "talking back" here, Lennie.

You make unfounded allegations. You can't/won't substantiate your
allegations.

You're a liar.

It really is THAT simple.

> >I have NEVER "derided" SINCGARS, Lennie.
>
> Tsk. You didn't even know about it.

Sure I do and did Lennie.

They are NOT pertient to Amateur Radio.

They are your one and only claim to "operation" in taht part of
the spectrum, Lennie.

> The most-produced radio system in the U.S. military, a quarter
> million (approximate) sets produced and made operational since
> 1989.

Made operational for the Armed Forces...NOT for Amateur Radio.

And more ISR radios have been deployed to the Armed Forces in the
last three years than SINCGARS was in the previous 15. (ISR is the
federal spin-off of the Family Radio Service...A-M-A-Z-I-N-G to me that
radios which are essentially rechannelized UHF CB's are more functional
to the Armed Forces than Lennie's vaunted SINCGARS!)

> >I have said they are not relevent to Amateur Radio.
>
> The AN/PRC-119 family operates in the 30 to 88 MHz frequency
> range. Uses some modulation and modes not allocated to U.S.
> amateurs. Nonetheless it IS a radio.

It IS a radio.

It is not AMATEUR Radio.

> >However YOUR "reserve" duty was NOT active reserves. You were

> >
> >Then why do YOU keep bringing it up, Lennie...?!?! I don't.
>
> Tsk. Okay, you couldn't hack it as a purchasing agent in an
> electronics company that "rents servers from Antec." Boo hoo.

I "couldn't hack" not being in full-time Nursing again. I needed
a break after I lost my daughter. I got it. It really is THAT simple.

> >You're right again! Yet YOU keep bringing up your alleged

Congratulations on the planning.

Kinda a bummer you did so well on that, yet never amounted to much
as a "regular full time professional engineer", eh...???

> Ahhh...you are angry that some of us ARE retired but YOU must
> keep on working! If you suffer, all must suffer! You are the
center
> of the universe?

Why would I be "angry" about not being retired before I was 50,
Lennie?

So I could sit around looking for ways to be irritating and
annoying like YOU do...?!?!

> >So, Lennie...How did you go from making inappropriate suggestions
> >of where/how I became an aviator to discussing the entry of SINCGARS
to
> >military service...???
>
> Gee...you ought to digitize your Command Pilot wings and glorify
> yourself as "Pilot in Command" on a website!

Still waiting Lennie...

BTW, I don't have "Command Pilot" wings. I am, however, licensed
by the federal government to BE a "pilot-in-command".

> You became an AVIATOR! Wow! You need a good script to make
> a movie from! [maybe Leonardo diCaprio could star in a sequel?]

STILL waiting, Lennie...

Where's the proof to substantiate YOUR claim that I supposedly said
the Armed Forces made me an Aviator?

> >Are you going to acknowledge your error or not?
>
> "Acknowledge my error?"

OK... My bad...there's so MANY of them I should have specified.

Your ERROR about some claim you alledge I made that the Armed
Forces were responsible for my Airman's Certificate.

> >Ya think that maybe that's why I participate in an AMATEUR radio
> >forum...?!?!
>
> Is it? I thought you were just venting and venting and venting to

> get over your daily frustrations at not being more than you are.

Hmmmmmmmmmmmmmm....I'd ask you to cite where I said I was
frustrated at not being more than I am, however I can say that I AM
more than YOU ever were!

> >By the way...YOU, Mr "Radio Professional", have repeatedly
> >insisted that there are radio services established strictly for
> >"recreational" purposes, yet there's not a single bit of
substantiating

you
> >to cite the federal rule that supports your assertions.
>
> Tsk. You can find them in Part 95, Title 47 Code of Federal
> Regulations.

No, I cannot.

There's not a single radio service nor subpart of any service that
establishes it as being for strictly recreational purposes.

> Tsk, tsk. I've mentioned that Part many times in here, in public.

Yes, You have.

> >Your ENTIRE existence in RRAP has been about trying to dazzle us
> >with your "Been There-Done That" bragging of your own.
>
> Poor baby...still pissed to an extreme point that anyone has done
> anything better than you...

Nope.

Unlike you, I can look to someone else's accomplishments, admire
them. learn from them, and express my appreciation for the deed
accomplished.

You cannot.

And SO far, other than having made it to your age without getting
shot or maimed by the people you've irritated, antagonized, lied to,
deceived, cheated, stole from or otherwise just ticked off, you have
not demonstrated or documented a single thing that I can consider
"worthy" of even the most minimal of respect

> >We've asked you to provide the name of ONE PERSON who is, this
> >day, involved in radio communication in ANY phase because of some
> >guidance you have provided.
>
> >Your "contract" in Pennsylvania was your undoing as a newsgroup
> >guru-wannabe.
>
> Tsk. I've never had a "contract" of any kind of employment in

> Pennsylvania.

That's funny...YOU insisted that you did...Gave dates, places,
etc.

> >It's no "personal insult". You were in Pennsylvania. You named
> >places and dates. I have friends who were in those places during
those
> >dates.
>
> Ah, you have at least two friends! Amazing.

I have a lot more than that.

> >One of them knew you.
>
> Doubtful. You've not identified that person. You've not
identified
> where that fictitious person worked within that "facility." You
> simply fabricated a statement out of your fevered imagination.
> In other, pithier words, bullshit.

Ahhhhh yes...the last resort of the weak mind...Cornered, without
further recourse or options...profanity.

You were incompetent. They got rid of you. No big deal. I am
sure it was not the only time it happened...Just the only case that
could be verified.

> >Yet another moment where we're left wondering what ever happened
> >to you that made you such a vile, spiteful and empty shell of a
person,

Message-ID: <MPG.1c620401dd8d72a79896ad@News.Individual.NET>
Source record: 102450

In article <ct0uajhqk1@news.hawaii.edu>, jeffreyh@Hawaii.Edu says...

I keep hearing about homeland security grants for ham radio but as an
ARES/RACES EC/RO have never seen it up close and personal.

I've been offered grant money to cover membership drives by the Citizen Corps.
This was useless because it didn't offer money for what I needed which was
portable ham gear and some sort of standard attire for all the members so they
would be recognized as ham geeks by first responders.

My members are mostly retired on fixed income that lack the funds for usable
play toys other than antiques that might have PL.

The county we serve has offered to cover operating expenses for a converted
motor home used as a mobile comm center but internal gov't B.S. has prevented
us from getting even an oil change performed on the beast by the county DPW.
They are always "too busy". It is pure politic B.S. on part of DPW

The best support we have received is filtered down from the local nuke plant
operator. It allowed us to replace 15 year old 2 meter radios with quad band
mobile rigs and a set of ICOM dual band HT's along with antennas, etc.
Then again the cost of this gear could be increased cancer risk and an early
death.

From what I hear homeland security money doesn't go any further than the New
York State SEMO level, never to be seen at where the rubber meets the road.

Good old New York...Albany certainly needs an enema.

>An "extension course" >>IS<< a "correspondence course".

Here's where I have to rain on your parade, Steve.

My first year of grad study at UCLA was in "UCLA extension" status
to avoid very high non-resident tuition. These classes were the
same ones that "regular" status students took. The next year I was
a California resident so I could register for "regular" classes. When
I had completed all my course work ("matriculation" status) I could
petition for conversion of "extension" credits to "regular" credits.

Another type of "extension" courses were those taught off-campus,
either at another institution's or at some company's campus.

AFAIK UCLA never had correspondence courses. I wish that they had.
I was enrolled in my last required course when I had to leave the
area because of job transfer.

I don't know whether they still have that "extension" system.

>wrong.

That's because the ancestors of those gender-gappers were "still painting their faces blue, howling at the moon and worshipping trees!" BWAHAHAHAHAHAHAHAHAHAHAHAHAHAH!!!!!!!!!!

So...is this forum about amateur radio policy or is it going to be some kind of Chat Room for talkiing about broad-casting or radio broadcast programs or is it going to be some kind of Elitist thing where ancestors of the Romans are going to elevate themselves to a pedestal of greatness enough though their Empire is long since DEFUNCT?

Tsk. Morsemanship is clearly a mind-bender. One Hostile Action Hero imagines his evil enemies are sleeping with radio personalities while another worships the graven images of the Old Things in radio and declares hisself far more "superior" in ancestry than other European ancestry folk.

We gots an answer. The Nobel-ist Roman of them All has proclaimed his innate "superiority." He gots designer genes! [faded, worn, ripped at the knee from holes in his logic]

OK, everyone down on their knees, paint your faces blue, and worship the Greatest, the Nobel-ist Roman of them All. Ave!

SPQR and all that stuff. :-)

You guys are really, really sick puppies.

There you go, Steve! Too many men make god in their own image, and that
is why we have the religion oriented strife.

A suggestion for the self righteous. Assuming that the Bible is the
exact word of God written, go read about the size of heaven, and the
number of people that are going there, as well as the groups from which
they are from. Illuminating! Then read the Sermon on the mount for a
direct commandment on how you are SUPPOSED to act!!

> Good news? Yeah...right.

>is why we have the religion oriented strife.

Oh, my, are all you PCTA extras on a Hate Binge?

Or is this "piss-off-all-Christians-and-Jews" part of the new
catechism of the Church of St. Hiram?

Or maybe its a demonstration of the "inherent good will" of
radio amateurs? Geez, if so, you all have a complete and utter
polarity reversal of hate and love.

> A suggestion for the self righteous.

Here's a suggestion for YOU and your self-righteous Hate Group:

Let it be. It has NOTHING to do with radio, let alone amateur
radio.

Or think about that final ride. Will it be "up" with that kind of
HATE boiling over? Or will it be "down?"

>Assuming that the Bible is the
>exact word of God written, go read about the size of heaven, and the
>number of people that are going there, as well as the groups from which
>they are from. Illuminating! Then read the Sermon on the mount for a
>*direct commandment* on how you are SUPPOSED to act!!

I'm waiting for the next Sermon on the Antenna Mount.

You know, where all have to worship at the Church of St. Hiram
and follow the ARRL's ayatollah and everyone love, honor, and
cherish morse code...

>> Good news? Yeah...right.
>
> As Homer Simpson once asked:
>
>"Can God make a burrito so hot that he can't eat it? ;^)

Eat it, Coslo...eat it...

The government ain't that well organized. Remember that one of the
complaints about 9-11 was that the various intelligence and
investigative agencies did not talk with each other. More often
you get fiefdoms and turf wars.
>
> With its deep pockets, it seems to me that the DHS grants handed out were a

> to jell into something effective.

That wasn't it. What did it was that the commissioners are
lawyers and not technically inclined, and were bullshjtted by
BPL lobbyists.
>

> Oh, my, are all you PCTA extras on a Hate Binge?

Just the opposite, Lennie.

I am tired of the hate. I am tired of people who hide behind the
"sanctity" of religious baubels who are themselves only looking for a
forum from which to spew thier own form of hate, as sugar coated as it
may be.

> Or is this "piss-off-all-Christians-and-Jews" part of the new
> catechism of the Church of St. Hiram?

No "Church of St Hiram", and I don't remember limitins my comments
to just Jews and Christians...

Of which YOU could be NEITHER, Lennie, if you truly prescribe to
any Christian-Judeao tenents.

> Or maybe its a demonstration of the "inherent good will" of
> radio amateurs? Geez, if so, you all have a complete and utter
> polarity reversal of hate and love.

Again you are wrong.

I am just tired of people professing to be one thing, but being
another.

Just like YOU profess to be "interested" in Radio, yet you clearly
can't stand Radio Amateurs...Not just "PCTA Extras"...You clearly hate
anything/everything having to do with it.

> > A suggestion for the self righteous.
>
> Here's a suggestion for YOU and your self-righteous Hate Group:

There's no "hate group" here, unless it's "hate" of those who
pervert religious practice for evil intent.

Do YOU support the perversion of religion for personal or evil
intent, Lennie? It sure seems like it.

> Let it be. It has NOTHING to do with radio, let alone amateur
> radio.

THIS IS NOT A MODERATED FORUM, AND LEONARD H. ANDERSON, WHO HAS
CRIED "FOUL" AT THE PERCEPTION OF BEING MODERATED BEFORE, HAS
ZERO-POINT-ZERO RIGHT OR "AUTHORITY" TO DEMAND THAT ANYONE ELSE DISCUSS
OR NOT DISCUSS >>ANY<< TOPIC.

> Or think about that final ride. Will it be "up" with that kind of
> HATE boiling over? Or will it be "down?"

What does it matter?

If you're Jewish, there is no down. They don't teach about Hell
in their doctrine.

The Catholics teach of different levels of "down". More like a
little sideways and off to the side, and some time spent in Purgatory
for certain kinds of sin can still get you absolved and into Heaven.

> >Assuming that the Bible is the
> >exact word of God written, go read about the size of heaven, and the

You're still just upset that YOU are not the one on the cross that
everyone is praising.

They're not "praising" you for good reason. You are without
worthiness.

What does it matter to you, Lennie?

You're not a lceisned Amateur, so you have no practical experience
from which to draw upon on which to make an informed opinion.

You're NOT an FCC commissioner, ergo have no duty to act.

Your past performance in this forum indicates only a peripheral
exposure to the service, and an even more distant understanding of what
Amateur Radio is about.

> Tsk. Morsemanship is clearly a mind-bender.

Didn't take you long to introduce Morse Code into the equation.

Obvioulsy not. It's available via numerous on-line resources,
however it's obvious that Lennie has not availed himself of any of
them.

> > All simply MUST do so...as it has always
> > been done...no good reasons given.
>

> Operating within the law isn't a good reason?

It's "not cool" to be law-abiding in Lennie's neighborhood.

> As for the Latin, it's one of the languages my ancestors used.

Lennie's current "schtick" is to try and undermine others posts by claiming they don't have a "working knowledge" of the language of any one specific word they may use.

Ceertainly HE has no such mastery either...It's all just for argument's sake, which is all that Lennie's about any way.

> They had world-class poetry, art, drama, philosophy, mathematics,

> gave us of any value was the names of some of the days of the week.

At Lennie's age, he TURNS blue, can properly identify the moon three out of five times, and hikes a leg when he gets anywhere near a tree. Her can usually (but not always) get the days of the week in order if given a jingle to remember them by.

Phil, they did up to ten years ago.

Extension courses around L.A. have branched out into the expensive
pay-a-lot postgraduate technology courses with a strange "credit"
system. Makes a fair bit of change for UCLA and several other
universities here, even the "junior" colleges. Those are in the $300
to $600 a day (full day) category. I get lots of spam ads from those
in the mail.

"Regular" (ordinary college credit) extension courses seem to be
dwindling somewhat at the big institutions such as UCLA and USC.
UCLA has a huge campus in Westwood and had poor parking way
back when, one reason I didn't/couldn't go there except a few times.
Smaller institutions were easier to get to such as CSUN, Loyolla,
and even Los Angeles Trade-Tech (which did have college credit
night courses held at outlying high school classrooms).

Most of the aerospace corporations here weren't so interested in all those credentials (suitable for framing) despite what Personnel departments (sorry, "Human Resources") said and did on hiring. Engineering departments managed to get the last word on who could be hired via "second interviews" with prospective hirees. "Credentials" were necessary (apparently) for Management to show das Government on Big Contracts talks. Despite all that the Engineering departments functioned well and still managed to invent and innovate and designs that pushed the envelopes of performance well out of old boundaries.

Ooops, we've departed from the Antichrist's latest Hate Rant. Back to critiques of "Dr. Laura" and cross-coupled evangelists, "CW" beeping amateurs still "pioneering" the short waves using vacuum tube radios.

Seems like Rev. Jim is working up to another Sermon on the Antenna Mount...this time on Credentialism, a seeming necessity for all to state anything about anything in this recreational amateur radio policy newsgroup.

Lately we've all been treated to the rantings of an Antichrist-wannabe (aka Doctor Strangeglove) who wants to ban all religions. That goes farther than some broadcasting program content and opinions thereof.

Apparently Rev. Jim is displeased that anyone has opinions counter to his own ultraconservatism (keeping amateur radio safe and happy with good old fashioned morse code). He claims "authoritiy" by virtue of an old extra class amateur license which, apparently, overrides the First Amendment of the United States Constitution applicable to all other U.S. citizens. [democratic principles in action in amateurism?]

Excuse me, I have to go meet my wife "on the streets." (the street in front of her hairdresser's) Doctor Strangeglove thinks I first met her "on the streets." Wierd, wired Doctor. He is so cross...

OK, everyone back to the Entertainment Newsgroup and reviews of Broadcasting Service program content...

>
>Just the opposite, Lennie.

Nah...you just HATE about everything. Tsk, tsk.

>I am tired of the hate.

Religion is apparently your new-found subject.

>I am tired of people who hide behind the
>"sanctity" of religious baubels who are themselves only looking for a
>forum from which to spew thier own form of hate, as sugar coated as it
>may be.

"Baubels?" :-) "Thier?" :-)

So...you think that all radio amateurs should give up any religious
beliefs? Conventional religions which have been in existance for
a while?

Apparently you want all to Believe in the self-righteous "religions"
in recreational hobby pursuits such as amateur radio? You know,
the one where all "must" love, honor, and obey the morse code
test to prove their "faithfulness and dedication" to the amateur
cause?

>> Or is this "piss-off-all-Christians-and-Jews" part of the new
>> catechism of the Church of St. Hiram?
>
>No "Church of St Hiram", and I don't remember limitins my comments
>to just Jews and Christians...

That makes you an Equal-Opportunity Hater! Marvelous. Hate all
and everything! :-)

>Of which YOU could be NEITHER, Lennie, if you truly prescribe to
>any Christian-Judeao tenents.

"Judeao tenents?" :-) "Prescribe?" :-)

Gosh, I've never imitated a Doctor of Theology to "prescribe"
anything. Did some cleric write you the wrong prescription?
[and you got it filled and got side-effects? must be...]

>I am just tired of people professing to be one thing, but being
>another.

Awwww....poor baby.

Wow, you must REALLY hate yourself, then! :-)

>Just like YOU profess to be "interested" in Radio, yet you clearly
>can't stand Radio Amateurs...Not just "PCTA Extras"...You clearly hate
>anything/everything having to do with it.

Tsk. Doctor Strangeglove flipped out again. Must be filling his stash
with the wrong snitched drugs from the hospital pharmacy (he
apparently "subscribes" to regular doses?).

Tsk, tsk. I was interested enough in radio and electronics to make
it my career of choice a long time ago...even though I could have
made a good living at being an illustrator. Some PCTA extras in
here seem to think I should have followed Their procedure and
become a licensed amateur first. Strange, the U.S. military didn't
think that way and they operated worldwide communications for
decades...successfully. Obviously, to those PCTA extras, the
U.S. military wasn't "interested enough" in radio to do it "right." :-)

>> > A suggestion for the self righteous.
>>
>> Here's a suggestion for YOU and your self-righteous Hate Group:
>
>There's no "hate group" here, unless it's "hate" of those who
>pervert religious practice for evil intent.

So...you are calling the Worship of Morse Code a "pervert religious
practice?"

Tsk, tsk.

>Do YOU support the perversion of religion for personal or evil
>intent, Lennie? It sure seems like it.

Tsk, tsk...I don't support the retention of the morse code test
for any radio operator license examination. :-)

>> Let it be. It has NOTHING to do with radio, let alone amateur
>> radio.
>
>THIS IS NOT A MODERATED FORUM, AND LEONARD H. ANDERSON, WHO HAS
>CRIED "FOUL" AT THE PERCEPTION OF BEING MODERATED BEFORE, HAS
>ZERO-POINT-ZERO RIGHT OR "AUTHORITY" TO DEMAND THAT ANYONE ELSE DISCUSS
>OR NOT DISCUSS >>ANY<< TOPIC.

Whooo-eeee. The Antichrist-wannabe must be on Hate Steroids!

[does the hospital pharmacy actually stock those things or are you
getting them illegally?]

So...you are now campaigning to rename this newsgroup to

rec.radio.anything.goes.because.we.are.pcta.extras?

Must be.

>> Or think about that final ride. Will it be "up" with that kind of
>> HATE boiling over? Or will it be "down?"
>
>What does it matter?
>
>If you're Jewish, there is no down. They don't teach about Hell
>in their doctrine.

Don't tell us...you are now going to say something like
"Sorry, Hans, Judaism >>IS<< amateur radio?" :-)

>The Catholics teach of different levels of "down". More like a
>little sideways and off to the side, and some time spent in Purgatory
>for certain kinds of sin can still get you absolved and into Heaven.

You don't have a Medical Doctorate? You are a Doctorate in
Theology?

Did you attend a Seminary or are you just whacking-off in your
head again?

>> I'm waiting for the next Sermon on the Antenna Mount.
>>

Technology News Printable View
AOL to Drop Direct Usenet Access
January 26, 2005 10:06 PM EST
NEW YORK - America Online will stop providing direct access to Usenet newsgroups, one of the earliest forums on the Internet for people to discuss a large variety of topics from television shows to software to sex.

The move to drop AOL next month comes as usage of the service has shrunk to fewer than 1,000 users a month. AOL has some 23 million subscribers in the United States alone.

Dropping Usenet will let AOL focus more on more popular community features such as message boards, chat rooms and online journals, said AOL spokeswoman Jay Esmele.

AOL users still would be able to access Usenet groups from other providers, including Google Inc., which packages the newsgroups for free as "Google Groups."

Thousands of Usenet groups exist, covering a range of topics. They go by such names as "alt.tv.amazing-race," a discussion forum for the reality series "The Amazing Race." Though Usenet groups are generally text-based, some exist for exchanging photographs and music files.

Please note that in definition 2, you have put the emphasis on the wrong word. The emphasis should be on JUDGEMENT not on knowledge. Note that various and conflicting judgements (opinions) can be formed from the same knowledge.

There is of course no rule that hams cannot be opinionated. There is of course no rule that they cannot discuss their opinions in the course of ordinary two way conversations. However the limited "broadcasting" allowed by part 97 specifies information bulletins. Opinions are not information although of course they may be derived from information.

Just keeping up with the Anderson's, Your Scumminess.

> Is this the "new" amateur's code? Insulting spouses besides
> trying to spew hatred on organized religion?

Being married to a pathological liar like you is it's own insult,
Lennie. Nothing else I could say or do can change that.

And putting the mirror up to some organized religions for what
they are is not "hatred". The fact that the majority of wars fought on
this planet are over religious ideology is not "hatred", it's fact.

There are thousands of Clerics, Rabbis, Priests, Ministers,
Shamans and hundreds of other "religious practitioners" who promote
various forms of violence every day.

This practice is not limitied to "foreign" practitioners, either.
Jerry Falwell, Jimmy Swaggart and others have done thier share of muck
raking over the years.

Here in the Chattanooga area, for example, the Seventh Day
Adventists have up several billboards around town chiding other faiths
for worshiping on Sundays when SATURDAY (in thier opinion) is the TRUE
sabbath.

Personally, I think if you're gonna practice ANY faith, EVERYday
should be your sabbath, but that's just me...You're welcome to your own
faith and beliefs...

There is nothing in the Christian Bible that says "Sunday" is the
sabbath. Nor does it say "Saturday".

> Is that the "new" method of "elmering" folks who might be
> interested in getting an amateur radio license? Must be...

This is not Amatuer Radio, Lennie, as you have been constantly
reminded of before.

> Radio amateurs the world over should be grate-full at these
> "new" methods of "increasing interest in ham radio." Really
> stokes the stove to imply a spouse was a prostie "working
> the streets."

Oh...As opposed to YOUR methods, Lennie? Ten years of slamming
anyone and everyone having ANYthing to do with Amateur Radio???

Please, Lennie...You've been asked over and over and over...PLEASE
tell us of YOUR "Elmering" or mentoring achievements in Radio over the
past 50 years...! ! ! !

> Go back to your Antichrist-wannabe slavering with Hatred.
> That becomes you more.

There's nothing "antichrist" about challenging organized religious
"practices" that are counter to the tenents of the faith BEING
practiced.

To suggest that my impatience with those who warp or take
advantage of the human desire to "believe" is foolhearty...

But then, you ARE RRAP's resident fool.

> actually made that proclamation.
>
>From the Report and Order to 04-37, as reported in the ARRL Letter:

BEGIN QUOTE

"We recognize that some radio operations in the bands being used for
Access BPL, such as those of Amateur Radio licensees, may occur at
distances sufficiently close to power lines as to make harmful
interference a possibility,"

"We believe that
those situations can be addressed through interference avoidance
techniques by the Access BPL provider such as frequency band selection,
notching, or judicious device placement."

"In addition, because power lines inherently can radiate significant
noise
emissions as noted by NTIA and ARRL, good engineering practice is to
locate sensitive receiver antennas as far as practicable from power
lines,"

"such noise can often be avoided by carefully
locating their antennas; in many instances an antenna relocation of
only a
relatively short distance can resolve noise interference."

BPL operators would be required to avoid certain bands, such as those
used
for life and safety communications by aeronautical mobile or US Coast
Guard stations. The FCC R&O makes clear, however, that similar rules
will
not apply to the Amateur Service.

"We similarly do not find that Amateur Radio frequencies warrant the
special protection afforded frequencies reserved for international

aeronautical and maritime safety operations," the Commission said.
"While
we recognize that amateurs may on occasion assist in providing
emergency
communications," the FCC added. It described typical amateur operations
as
"routine communications and hobby activities." (

Although some cases of harmful interference may be possible from BPL
emissions at levels up to Part 15 limits, the FCC said, "we agree with
NTIA [National Telecommunications and Information Administration] that
the
benefits of Access BPL service warrant acceptance of a small and
manageable degree of interference risk." The Commission reiterated in
the
R&O its belief that BPL's public benefits "are sufficiently important
and
significant so as to outweigh the limited potential for increased
harmful
interference that may arise."

Further, the new rules spell out the locations of "small geographic
exclusion zones" as well as excluded bands or frequencies--concessions
made primarily at the insistence of the NTIA, which administers radio
spectrum for federal government users--and "coordination areas" where
BPL
operators must "precoordinate" spectrum use. The rules also detail
techniques to measure BPL emissions from system equipment and power
lines.

The FCC said it expects "good faith" on both sides in the event of
interference complaints. While the Commission said it expects BPL
operators to take every interference complaint seriously and to
diagnose
the possible cause of interference quickly, it also suggested that
complainants have responsibilities.

"At the same time, we expect the complainant to have first taken
reasonable steps to confirm that interference, rather than a receiver
system malfunction, is occurring and, to the extent practicable, to
determine that the interference source is located outside the
complainant's premises," the Commission said.

Shutting down a BPL system in response to a valid interference
complaint
"would be a last resort when all other efforts to satisfactorily reduce
interference have failed," the FCC said.

END QUOTE

While the FCC paid lip service to amateur radio's role in public
service communications, they did not see fit to protect the ARS from

BPL interference. Instead, we are supposed to "relocate sensitive receiving antennas" and have
good faith in the BPL providers. Never mind that BPL turns all of the house wiring, not just the distribution wiring, into a noise radiator, even if you're not a subscriber. And never mind that many hams do not live on large unencumbered properties where antenna location can be chosen freely.

Basically the message is that the Administration, through its appointees in the FCC, sees the need for BPL as being more important than the ARS.

Seems to me that the first thing you'd have to do is *prove* that the BPL is causing you "harmful interference". Then you'd have to let the BPL providers do whatever they can to reduce or eliminate it - and FCC expects you to show "good faith" and cooperate with them. And even if the interference is not eliminated, FCC may or may not force the BPL folks to do anything about it besides trying to solve the problem.

Of course you can demand it. Whether they do so is another matter.

It is identical to the neighbor saying "I want that ham to keep his
radio signals from going through or crossing the space above my
house".

Don't open that can of worms.

>rules apply?

Who knows?

As I understand it, the old concepts worked like this:

One of the prime directives of the FCC was to protect the various radio services from interference. This meant both interference between different radio services, and interference from other electrical devices. Licensed radio servics *always* had priority over nonradio electrical devices.

For example, if you had a business that used an RF-based heatsealing machine, and the machine radiated RF that interfered with someone's radio operations, you'd be required to shield it so no harmful interference resulted, or shut down.

In almost all cases, methods of interference abatement have been developed. The RF-based heatsealing machines were shielded to the point that they didn't radiate enough to interfere, and their frequencies of operation chosen to avoid common problems if some RF did leak out.

These rules usually worked OK for point sources of RF in industrial environments. But BPL is neither a point source, nor is it usually meant for industrial environments.

What's different about how FCC has addressed BPL is that the potential for interference is not only obvious, it's been demonstrated - and remediation techniques are very limited, because the power lines make good antennas by their very nature! Yet FCC allows BPL to exist, probably because it's more a political decision than an engineering one.

Sure enough, Phil. But would this situation include:

Shortwave stations
Domestic broadcast stations
Service comms - police, safety, ambulance, etc
Other folks rf radiators - wireless telephones, wireless
headphones.
And the most prevalent RF - cellphones.
Cosmic rays
The background radiation of the universe

Lots of other RF trespass if we stop to think about it.

Seems that if a person were to concentrate on Amateur radio, they would
be discriminating against one group.

Since there is no way to eliminate all the RF that a person might have on "their" property, perhaps a yard sized Faraday cage is in order? 8^)

> That's a different bucket of worms.

Yup.

Kinda like the person who objected to the installation of the cable TV coax on the poles at the front of his property. His objection was that the cable carried stuff like the "Playboy Channel". Never mind that he wasn't a cable subscriber, and that the pole line easements predated his ownership of the property - he didn't want his property used to distribute such programs in any way!

Of course you can guess how much legal water that objection held...

That's the joy of the trespass laws - the property owner can
discriminate all s/he wants as long as the property is not involved
in commerce or open to the public.

>Since there is no way to eliminate all the RF that a person might have

Listen to 3945 kHz LSB

These individuals violate the regulations regarding profanity on the HF band.

They are acting like those CBers

And there's one callsign that should be changed --
N1SOB in Palm Beach, FL.

The group was bad mouthing someone on the Liberty Net named "Victor" (Net Control Station).
Saying that, "Victor is an ass. He thinks he's God and the Net is the best thing since sliced bread."

One station calls his wife a "Real Estate Bitch"
A real family oriented ...he isn't, mmm-kay.

Another station comes in from Connecticut and everyone gets all friendly until he leaves, then they start their trash-talking.

Too bad if either the deed granted a utility easement (which most deeds
have) or a default easement (equivalent to "squatter's rights") was
created by the utility occupying that area.

As long as the dominent tenement (the easement-holder) is doing what
the easement describes or some other lawful act in furtherance of
same, the servient tenement (the easement-granter) is SOL.

Do not confuse those tenements with a similar-named type of housing
in which I grew up.

>Of course you can guess how much legal water that objection held...

Yup...

'Scuse the silly nit-picking here but those unlicensed old open-cabinet induction heat-sealing machines operated around 27 Mhz back when licensed hams also operated on those freqs. If I recall it right problem was that 11M was a shared band and us licensed types had no legal bitch on heat-sealing machine RFI, it was live with it or go play on some other ham band.

But eventually the FCC lowered the boom on the heat-sealing machines. Then they tossed us out of the band and turned it over to the CBers. Which at the time was (temporarily) another licensed service. Ah, the webs "they" weave . . !

Yep - that was the old ISM band (industrial-scientific-medical). Remember
diathermy machines?

The problem was that those machines were often spectrally unclean. Harmonics
all over the place - including high band VHF mobile. And there was often nobody
in the plant who really understood how they worked or checked up on whether
they were still in the band.

knew an operation in the '60s that had a rather interesting visit from
Philadelphia's Finest because their machine had a harmonic on the dispatch
channel. Commissioner and later Mayor Rizzo was *not* pleased...

Yup.

btw, Chambersburg dumped their BPL proposal. See the ARRL website - local
opposition caused the town fathers to look elsewhere for broadband.

Utility easement from wayback.

> As long as the dominent tenement (the easement-holder) is doing what
> the easement describes or some other lawful act in furtherance of
> same, the servient tenement (the easement-granter) is SOL.

We had a classic case of this in my old neighborhood, atop RadioTelegraph Hill.

Water company bought up several lots on one street and built an above ground water tank on two of them. Kept the other two lots for expansion if a second tank was ever needed. Fenced the front of the property but not the back.

Property owners who backed up to the vacant water company area were allowed to use the ground but not put up anything permanent. They kept the grass cut and the weeds down, and there was no vandalism.

But after 20 years the water co. had to build a fence and kick the neighbors off, even though they offered to sign legal papers disavowing any claim to the land or right of access to it. Water co. was afraid of establishing a precedent and a default easement, which in PA happens if you allow something for 21 years. Also liability, which was becoming more of an issue in those days (early 1970s).

OK, how about this one - actually had this discussion with a lawyer back in the old analog-cordless-phone days(!):

Drug dealer operates out of a house unsuspected by neighbors because the operation is so well concealed. But the dealer makes a mistake and gets one of those first-generation no-security cordless phones

Check part 97, it only bans indecent and obscene speech. Nothing about vulgarity or profanity. The ARRL publication of the FCC rules cites past FCC cases and opinions as to what constitutes indecent or obscene speech. To summarize very briefly, it is considered obscene or indecent when terms widely considered to be offensive are used to describe sexual activity/organs or excretory activity.

> They are acting like those CBers

While vulgar and in bad taste, this isn't obscene or indecent. And it is not profanity.

> One station calls his wife a "Real Estate Bitch"
> A real family oriented ...he isn't, mmm-kay.
>

Again this is vulgar and in bad taste but it hardly fits the definitions of obscene or indecent. And once again, it is not profanity. I certainly would not speak so as I was raised better than that. I wouldn't even say things like this in private and as far as that goes, I avoid even thinking in vulgarities, etc.

> Another station comes in from Connecticut and everyone gets all friendly

Best thing to do is avoid such "nets." Much as we dislike them, they are probably on the legal side of that fine line.

No,I want them to keep the signal off my house wiring, which I own. My house wiring is connected, at my choosing, to the power system in order to receive the AC supplied by the power companyu for my use, which I pay for. I do not have a need for any BPL signals on my house wiring and I should have the right to demand they not be there. The fact that I own the house wiring should be enough reason for me to say what is or isn't put on that house wiring.

>But eventually the FCC lowered the boom on the heat-sealing machines.

The major problem with the old-style heat sealers was the harmonics
which were generated - the fundamental frequency swept upwards as
the plasitic melted and the fifth harmonics fell in the aviation band.

Upon complaint from the FAA backed up by FCC field measurments, the
local FCC Engineer in Charge (now called District Director) has the
legal authority to issue a Cease and Desist Order closing down not
only the machine in question but the entire site until the site was
certified harmonic-free and so verified by an overflight of the
FAA's (notorious) instrumentation plane, usually piloted by a
someone we called - with sufficient reason - "Vertical John". We
always declined to accompany him....

We didn't like to use that authority too often because it would result
in the unemployment of a lot of minimum-wage immigrant employees.

>Then they tossed us out of the band and turned it over to the CBers.
>Which at the time was (temporarily) another licensed service. Ah, the
>webs "they" weave . . !

In reality, it came about when the ITU designated the band 27.12 +/-
160 kHz for "Industrial, Scientific, and Medical" and in came the
heat sealers, diathermy machines, and similar noise generators. That
resulted in 11 meters being turned into an electronic garbage can.
The CBers got it on the basis of "if you can use it for any local
communications through all the garbage, go ahead and do it".

The only reason that any communications can be conducted on that
band now is that all the shielding, bypassing, and grounding
necessary to comply with the harmonic elimination requirement also
keeps the fundamental from being radiated.

A ham for whom I was the "elmer" some 30+ years ago became the test engineer at the Varian Tube division that manufactures the wastebasket-sized tubes for ultra high power uses, and Ray swore that someday he was going to design a test jig that would have all the harmonic suppression but permit the unlimited field radiation allowed for ISM devices on 27.12 MHz, thereby solving the "CB problem" for about one-third of the US.

He never did.....

And the rest of the question ??

Taking a WAG, in "the old days" it was not unlawful to intercept and
use as evidence the conversations from the base unit of a cordless
phone - no warrant was necessary. The (Federal) ECPA was amended a
number of years ago to require a warrant for the above, same as for
cellphone conversations.

You can say any words except for George Carlin's list
of "7 dirty words you can't say on TV". Bad taste isn't
illegal, just not good. Some people never made it out of
junior high school in their minds.....

He claimed that listening in on the conversation was the same as wiretapping, and since there was no warrant for a wiretap, the evidence was all illegally obtained and none of it could be used.

I said that the radio signals were not legally protected in any way, because the Communications Act does not authorize the use of the radio spectrum for illegal purposes. I also said that wiretapping involves connection to the common carrier's equipment, and the customer-phone company contract specified privacy of communications, while the radiating cordless phone is customer-owned and no such privacy is contracted or even implied.

Also, I made the following analogy:

Suppose it is a quiet night in comfortable weather. Everyone in the neighborhood has their windows wide open. Suppose Neighbor A, on his own property, overhears Neighbor B, on *her* own property, discussing a drug deal or other illegal act. Neighbor B doesn't realize how loud she is talking and how well she can be heard across property lines. Is that evidence admissible? Or is Neighbor A supposed to plug his ears and shout "lalala I can't hear you"?

My layman's guess is that, today, such an overheard conversation could only be used to get a warrant.

Well, if I were sufficiently resourceful and beligerant, I'd do one or a combination of the following: i) move to some place out in the boonies where the power lines are far away and generate my own electricity. I'm in a retirement house and they had to bring power lines 700 feet to the house and 300 feet from my property line to the nearest source and I seriously looked into purchasing a 10-30 kw diesel generator and giving THEM the finger. ii) unhook your house from the utility and generate your own (might not help for RF radiated from the PLs), iii) explore other modes and frequencies if you get BPL ORM and see if you can live with what is left in your hobby, or iv) change hobbies (birdwatching, beer, etc).

(see quoted material below).

Yeah, I read that snot below (authored by the FCC) and its all part of the commercialization of ANYthing that can be commercialized. Its all about money and power. Enron/Anderson/Worldcom/etcscams. Export the jobs to India/China, degrade human flesh born in the USA, and it doesn't matter who you vote for, the politicos will listen to the lobbyists not the citizens. Someday they'll figure out how to tax you for the air you breath and the sunlight that falls to earth and we use it to see the landscape and where we are. I read some years ago that some guy in the FCC had the great thought that someday frequency spectrum will be bought and sold on the stock market, futures markets, options. Just like flesh on the block (slavery) years ago.

Amazing, ain't it Phil? Look at all these so called educated folks
discussing the pro and con of "amateur broadcasting"..

Looks like 14.275 has become the new sewer of ham radio. Riley ain't gonna
do squat. You want to get rid of these clowns? Get on freq before they
show up. End of problem.

Help me here please Toad Daugherty.

Why did you get into Ham Radio in the first place? According to your Blog site you got into Packet, liked it a lot....etc. Now your on here yapping about being a wanabee broadcaster. Sorta sounding like K1MAN.......I got a idea....how about you BOTH getting together and running a "broadcast" It will save on tape for all concerned,.

Dan/W4NTI

Gawd almighty.....the child broadcaster can't even keep a wire in the air
and he is expecting to make an impression. What a flippin loser.

And don't bother with a comeback Toad....your out of your league.

Good News!

Do you know how simple it is to go to Heaven after this life has ended?

Some people believe that belonging to a local church, temple, mosque or synagogue will get them to Heaven.

Others believe that water baptism, obeying the ten commandments or just being a good person will get them to Heaven.

There are many other beliefs as well, but the good news about God's way to Heaven is found in the Holy Bible.

The good news is that God came from Heaven to earth in the person of Jesus Christ over 2000 years ago and died for our sins(misdeeds). He was born in the land of Israel supernaturally to a virgin Jewish woman named Mary. He lived a sinless life for thirty-three years and then sacrificed His sinless blood and died on a cross to pay the death penalty for our sins. After Jesus was placed in a tomb He rose from the dead three days later as He said He would. The Holy Bible also tells us that Jesus Christ ascended into Heaven and that all who accept Him as their Lord and Saviour will live forever with Him in Heaven where there is no more death, sorrow, sickness and pain.

The Bible says, "For the wages of sin is death, but the gift of God is eternal life through Christ Jesus our Lord." (Romans 6:23)

This verse in the Bible says, "For ALL HAVE SINNED, and come short of the glory of God." (Romans 3:23)

This verse says, "But God demonstrates his own love for us in this: While we were still sinners, Christ died for us." (Romans 5:8)

In this passage the Bible clearly explains how simple it is to be saved and on your way to Heaven, "For if you confess with your mouth, "Jesus is Lord," and believe in your heart that God raised him from the dead, you WILL BE SAVED." (Romans 10:9)

You can be saved right now and on your way to Heaven if you will open your heart to Jesus and pray the following prayer:

Dear Jesus Christ, I want to be saved so that I can have a home in Heaven when I die. I agree with You that I am a sinner. I believe You love me and want to save me. I believe that You bled and died on the cross to pay the penalty for my sins. I believe that You rose from the dead. Please forgive my sins and come into my heart and be my Lord and Saviour. Thank You Lord Jesus Christ for forgiving me and saving me through Your merciful grace. Amen.

You are now a Christian if you said the prayer and allowed God to save you. Welcome to the family of God.

Salvation is not a reward but a gift. The Bible says it this way, "For it is by GRACE you have been SAVED, through FAITH and this not from yourselves, it is the GIFT of God." (Ephesians 2:8)

Nothing in the world is more important than your eternal destiny.

The Bible says, "In Him(Jesus) we have redemption through His blood, the forgiveness of sins..." (Ephesians 1:7)

If you have not yet made a decision to be saved, please do so now before it is too late. The reason why it is so important to be saved now is because you do not know exactly when you will die. You may die prematurely in a traffic accident, terrorist attack or some other way before you get another chance to be saved.

The Bible tells us that we will spend eternity in Heaven or a place of eternal torment called Hell. It would be terrible to die and go to Hell when all you have to do is accept Jesus Christ as your personal Lord and Saviour.

Some people that have already made Jesus Christ their Lord and Saviour worry about losing their salvation. The Bible teaches Christians that we can never lose our salvation no matter what happens.

The Bible says it this way, "My dear children, I write this to you so that you will not sin. But if anybody does sin, we have one who speaks to the Father in our defense Jesus Christ, the Righteous One." (1John 2:1)

Yes my friend, Jesus Christ is able to save you and keep you saved.

Please tell your family and friends, thanks!

Have a great day!

>
>He claimed that listening in on the conversation was the same as wiretapping,
>and since there was no warrant for a wiretap, the evidence was all illegally
>obtained and none of it could be used.

That's what the law is today. Before the ECPA was amended, there
was a loophole that didn't cover transmissions from a cordless base
unit, only the handset. There was an actual court case in Nebraska
where a neighbor picked up a drug deal from a cordless phone base
unit, and the court held in that case that there was no violation
and the evidence was admissible.

Then the ECPA was amended to close that loophole.

>I said that the radio signals were not legally protected in any way, because
>the Communications Act does not authorize the use of the radio spectrum for
>illegal purposes.

Not so - the purpose of the ECPA was to limit the power of the
government to use warrentless intercepted telephone or radio
conversations as mandated by the SCOTUS _Cohen_ case that
established the concept of "expectation of privacy" in
communications.

>I also said that wiretapping involves connection to the
>common carrier's equipment, and the customer-phone company contract specified
>privacy of communications, while the radiating cordless phone is customer-owned
>and no such privacy is contracted or even implied.

No again. Ther term "wiretapping" is applied to any communication
- aural, wire, or radio. IIRC that term is "street slang" and does
not appear in the ECPA.

>Also, I made the following analogy:
>
>Suppose it is a quiet night in comfortable weather. Everyone in the
>neighborhood has their windows wide open. Suppose Neighbor A, on his own
>property, overhears Neighbor B, on *her* own property, discussing a drug deal
>or other illegal act. Neighbor B doesn't realize how loud she is talking and
>how well she can be heard across property lines. Is that evidence admissible?

Sure is, to the limit of admissible hearsay.

>My layman's guess is that, today, such an overheard conversation
>could only be used to get a warrant.

That's because otherwise-inadmissible hearsay is admissible to
establish probable cause but cannot be used at trial.

I would have thought that your answer would be more accurate than that,
Phil. The CEPT agreement does impose a non-residence requirement, but FCC
rules don't, only a non-citizenship requirement.

So a YO who's been here for years is not likely to be able to operate under
CEPT. Albeit, it's not clear whether he would have to be non-resident for
tax purposes and/or for immigration purposes, but likely after 15 years he
both has a green card and pays US taxes as a resident (you can't pay taxes
as a non-resident if you are here more than 180 days in the year).

However, if there is a separate reciprocal agreement in place between the
US and YO (and I don't know whether there is) then he can operate on a YO
licence as long as he neither becomes a US citizen nor obtains a US
licence. Being a US resident, rather than a US citizen _only_ disqualifies
him under CEPT, not under a bilateral agreement.

Yeah...I know! It's going to go eventually, it's just that Lennie
wanted it to go on HIS terms and with everyone rallying around HIS
flag...Didn't happen that way, so now he's gonna pick a fight with
"whoever".

That's not what the Bible says. (John 3:16 refers)

This is a prime example of why religion is screwed up.

Here's another Carny barker with HIS story, and everyone rally
around! Jim Jones is dead, so there's room for more!

> He was born in the land
> of Israel supernaturally to a virgin Jewish woman
> named Mary.

We've already gone there.

> This verse in the Bible says, "For ALL HAVE SINNED, and
> come short of the glory of God." (Romans 3:23)

God knows this (that we are all sinners)

Then he gives us "free will" to make the choices he KNOWS we are
going to make, but then punishes us with Hell for doing what he allowed
us to do!

(Please don't tell me "it's his plan and we don't have to
understand...")

> If you have not yet made a decision to be saved, please do
> so now before it is too late. The reason why it is so
> important to be saved now is because you do not know
> exactly when you will die. You may die prematurely in a
> traffic accident, terrorist attack or some other way before
> you get another chance to be saved.

According to the same Bible, God is in control of all of this.
There is no such thing as "premature death" if you believe the Bible
verbatim. God "takes us home" when he's ready.

So...We have a quarter million dead from a tsunami...Enjoying the
sun one minute...Pinned between rubble and rushing water the
next...That musta been pleasant...

Eleven died last week when some despondent idiot parked his SUV on
the tracks.

Hundreds of thousands of Africans are dying of AIDS every year
when their only "sin" was to have been born into families on the
poorest continent on Earth.

> The Bible tells us that we will spend eternity in Heaven or
> a place of eternal torment called Hell.

The Bible was written before the creation of the Internet and
Lennie Anderson's gaining access to it. It may not be eternal, but it
IS "hell", and we didn't have to die to get there........

> It would be terrible
> to die and go to Hell when all you have to do is accept
> Jesus Christ as your personal Lord and Saviour.

So the God that loves us all, gives us free will, KNOWS what we are
going to do, when we are going to do it, and what the outcome will
be...Yet he plans on committing our immortal souls to "hell" for doing
what HE caused to happen?

> Some people that have already made Jesus Christ their Lord
> and Saviour worry about losing their salvation.

Jerry Swaggart...Tammy Faye....Jim Bakker...Jerry Falwell...

> The Bible
> teaches Christians that we can never lose our salvation no
> matter what happens.

MORE silliness....I "accept the Lord", then go out on an axe
murdering rage...I go to Heaven cuz I accept Christian salvation, but a
person who lives "a good life", does for others, and basically is a
good person gets to go to the "smoking" section for having not accepted
"his personal saviour".

> Yes my friend, Jesus Christ is able to save you and keep you
> saved.

THANK-YOU JESUS! (rape a 10 year old) HALLY-LOO-YA LORD! (murder
somone's mother) AMEN BROTHER! (rob a bank...)

> Please tell your family and friends, thanks!
Tell them what?

The topic was YOU, Lennie...I am surprised you passed up a chance
to flatter your favorite subject.

> Cross your legs, little Stevie, we are short on nails today...

What you're short of, Lennie, is a valid argument.

Again.

>more death, sorrow, sickness and pain.

A man-god, born to a virgin, great healer and teacher, dies, and rises from the dead after a few days to ascend to heaven. This story has been ripped off from dozens of other cultures, many of which pre-date Christianity by several thousand years.

>The Bible says, "For the wages of sin is death, but
>the gift of God is eternal life through Christ Jesus
>our Lord." (Romans 6:23)

>Please forgive my sins and come into my heart and be my
>Lord and Saviour. Thank You Lord Jesus Christ for
>forgiving me and saving me through Your merciful grace.
>Amen.

What sane person could possibly want to worship a god that condemns people to eternal torture simply because they don't believe in him, or because they want more proof of his existence than what's written in an ancient book of fairy tales?

You mean people don't care for being called Nun of the Above, Rev. Jim, Gunnery Nurse, Nursie, Robust Oberst, Nazi, Avenging Angle, Poop Dave, Some kind of Humorless Ham full of Angries, the paragon of Truth and Virtue, he say, Herr Kommandant, James Psychochief Miccolis, Kommandant uf das Neugruppen Waffe, Herr Gruppekommandant, Mr. Petty Chief Ossifer, das gruppenfuhrer, da Katapult King, La Cucaracha, Herr Gasbag, hockey puck, and fifth wheel on the four morsemen of the apocalypse? Just a small sampling of the names he calls those who would disagree with him. Sorry if I left any out!

Whodathunkit?

If ya don't care about the names - and I don't all that much, the content of the messages is a behavior issue in itself.

No one has to act like that. It is a choice.

Wanna talk to people? Allow them to want to talk to you. If you are going to be unpleasant in the extreme, you'll get a predictable reaction. When we do reply to him, you'll notice it is just reciprocal chain jerking. Big deal.

Must be what he wants.

- Mike KB3EIA -

1028. Len's terms of endearment list

In another post, I went back through a few weeks messages to find the cute little nicknames that LenOver21 makes up for people. I was pretty impressed with the volume, but I know I didn't get them all. I came up with 21 nicknames.

In the interest of not leaving anyone out who may have received one of his monikers, let's add to the list here:

Nun of the Above
Rev. Jim
Gunnery Nurse
Nursie
Robust Oberst
Nazi
Avenging Angle
Poop Dave
Some kind of Humorless Ham full of Angries
the paragon of Truth and Virtue, he say
Herr Kommandant
James Psychochief Miccolis
Kommandant uf das Neugruppen Waffe
Herr Gruppekommandant
Mr. Petty Chief Ossifer
das gruppenfuhrer
da Katapult King
La Cucaracha
Herr Gasbag
hockey puck
fifth wheel on the four morsemen of the apocalypse

Why don't you pick a wide spread of frequencies to make it harder to
find your transmissions?

For your information Dan, my show is not going to be 14.275. Since your are slow due to all that inbreeding down there in alabama I get you up to speed here. The N9OGL SHOW will be on Sunday at 4.00 pm CST; it was suppose to be today however, we got hit by a terrible snow storm. Unlike K1MAN my program is only on for a hour/ hour and a half. My program deals with issues in amateur radio. So feel free to get your wife/sister to sit around the radio and listen to my INFORMATION BULLETIN

Commander Cornhole,

If you haven't figured it out...it's a Information Bulletin (ONE-WAY COMMUNICATION) you don't talk back to it. As for antenna it fell down due to a snow storm.

I think they'd have to be. It is odd that the only person who showed up
for that particular poll turned out to be a person who has previously
posted a number of times. At that, he didn't agree with Len's manner.

> I meant the cast of characters with made-up names that Len talks about, but who

Ohhhhh--THOSE folks! Those names are especially reserved for those who
disagree with Len. That's when he breathes life into the well known
N2EY profile.

How are we to know who he means by those names? And why can't he simply call
people who disagree with him by their actual first names or callsigns?

AOL is still carrying newsgroups - but what will Len do when that stops?

If he narrowed it down to say 15 or 20 kcs then he might have to actually show up, but this way he if dosen't show up and when you claim you couldn't find him he could say you just didn't look in the right part of the band. I listened and scanned from 14.200 to 14.350, heard lots of stations in 9 land but never heard toddyboy. Bet he never transmitted.

Actually, Mike, you were correct...So was Brian...Brian uses the "Avenging Angel", however Lennie twists an already dumb idea into the more dumberest "Angle".

And you forgot "Brownshirts", "Elitists", "Dr Strangelove" and "Jimmie".

Oh...and let's not forget "Coslonaut".

If Lennie were to spend as much time on Amateur Radio as he does dissing Radio Amateurs, he'd get the recognition he THINKS he deserves now...But, we all know THAT won't happen...!

Oh, I missed that. Looks like he he's added a new twist and made it
his own. Probably patentable. Awesome.

Brian, I know that for what ever reason...maybe it's just to root
for the underdog, you've "sided" with Lennie.

But myself and a dozen other people have been TRYING to tell you
that Lennie is all-about making OTHER people's work HIS own...That's
partly why Lennie was disinvited from working in Pennsylvania, and
partly why you won't find his name as "author" in any professional
"radio"
journals...At least not since 1980.

Lennie can rant and rave about "PCTA Extras" or "Mighty Morsemen"
all he wants, but his circumstances are his OWN doing, and part of that
"doing" was trying to get by on the works of others.
And that now includes you.

73

Great... just fucking great. Now the rag-heads are sending their retards in as suicide bombers. What will they try next, sending Roger Wiseman?? Of course, that would never work because Roger would just blow the first Jew he sees... not "blow-up" just blow.

Headline:
Child with Down Syndrome used in Suicide Attack
31 January 2005

Terrorists used a disabled child as a suicide bomber on election day, Iraqi interior minister Falah al-Naqib said today.

In all, 44 people were killed in a total of 38 bomb attacks on polling stations. Police at the scene of one the Baghdad blasts said the bomber appeared to have Down's syndrome.

Mr Al-Naqib praised an Iraqi citizen who was killed while preventing one suicide bomber from reaching a crowd of people outside a polling station.

>Oh, I missed that. Looks like he he's added a new twist and made it
>his own. Probably patentable. Awesome.

Brian, those tongue-in-cheek satiric appelations were justly earned by all parties. :-)

Actually, "Avenging Angle" applies to nearly all PCTA extras. All are self-righeously Right even if they aren't in a triangle of being oh-so-superior to NCTAs. All who don't worship at the Church of St. Hiram are, to them, heretics and infidels, unworthy of surviving on the same planet as the PCTA. They are all Right Angles but perpendicular to the plane of existance of reality of today.

Much earlier in here I'd made mention of one Elfren Saldivar (hope name is correct), the "Angle of Death" at Glendale Memorial Hospital in this area. He was a nurse who offed a bunch of elderly patients "to ease their suffering." Lots of them. Registered nurse with certificates and everything... Sound familiar? :-)

So...we've got the "forever marine" spending the weekend shouting epithets using pejoratives not in his ethnic experience, always being the "avenger" for the "service." We've got the prissy never-served busy acting like Nun of the Above, rapping the knuckles of any who don't agree with him (or her). We've got the "forever ham" of four decades hamming it up into great "superiority" but who never learned a thing about diplomacy in the State Department "foreign service." We've got the "university lecturer" who survives the terrible storms that regularly destroy everything in Hawaii except the ham rigs and assists other hams in regards to USPS addresses. We have the coslonaut who wanted hearty congratulations for a feat he hasn't yet begun but was upset when he didn't get it. A nice jolly group of down-lookers in their own PCTA "blog" happily giving each other high-fives for being so intrinisically superior to all others. The major "superiority" attribute is cussing out "civilians" not possessing the right ham hobby papers to show to their raddio kopp schutzstaffel.

They can flog each other in this blog for all I care. [some do]
All their little names are familiar to all who look into this blog.
[it long since dropped out as a discussion place, became a chat
room reserved for their highnesses, a group blog] They've
worked hard at earning all those names and should be proud of
them. :-)

Godwin's observation as the catalyst of their being compared to
the national socialist party of 1930s Germany applies in the truest
form. They gas back and forth so much in the group blog that
they need their own chambers. [again deserved by them]

As to amateur radio policy, only the newsgroup name has any
relevation to "ham radio." They ham it up, not on radio, not on
any "airwaves," only on computers, saved from direct physical
harm through time and distance by insulting all who don't agree
with them. Hear them roar! :-)

Free thinking people tend to speak freely as well. While some Hams on the frequency can get completely out of control at times, as a group we do try to self police excessive abuse of acceptable speech. If this is not to your satifaction, your more than welcome to go back to your home frequency and listen there.

The legality of the behavior on the frequency has already been addressed by Riley. That is the whole reason this is being debated here. There is nothing illlegal being done. Therefore, no action by Riley has been taken.

If your not happy with the concept of free speech, perhaps you should consider moving to the Peoples Republic of Clinton/Gore. Also known as China. They will be happy to control all of the speech and thoughts that you may be capable of producing.

I didn't write down their call signs I will rebroadcast the program Thursday and Friday afternoon all I can tell you sport is listen up then maybe you hear me. As for frequency I will not designate any frequency because I don't want some licensed CB Operator or amateur radio operator inbreeds claim they were on that frequency first or claim interference. I scan the band and pick an unused frequency good hunting

If you'll check out his latest rant in this thread, you'll see
that Lennie doesn't like much of anyone.

He has something ugly to say about each of us... He comes into an
Amateur Radio forum, is ugly to and dishonest in his representations of
Amateurs, then wonders why no one wants to be his pal.

"I scan the band and pick
an unused frequency"

Excellent practice Todd! Congratulations. You are clearly a step above
that nutcase from Maine, K1MAN, who doesn't give a damn who he maliciously
jams when he starts up his crapcasts.

73,
Chuck...

1078. Has anyone actuially received the latest QRZ Callsign CD

Newsgroup: rec.radio.amateur.policy
Date: 2005-02-01 19:33:31 UTC
From: Charlie <charlie@earthlink.com>
Message-ID: <10vvmcinb0n0403@news.supernews.com>

Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.digital.misc,rec.radio.amateur.dx,rec.radio.amateur.homebrew,rec.radio.amateur.misc,rec.radio.amateur.policy

I ordered mine over 8 days ago and so far not a word from qrz.com except an "order confirmation" on Dec 25 and a charge to our CC of course. The "new CD" was advertised as "available now" on the web site.

1080. Re: ARS License Numbers

Newsgroup: rec.radio.amateur.policy
Date: 2005-02-01 20:24:40 UTC
From: N2EY@AOL.COM
Message-ID: <1107289480.159802.234090@z14g2000cwz.googlegroups.com>
Source record: 102645

These are the numbers of current, unexpired amateur licenses held by
individuals on the stated dates:

As of May 14, 2000:

Novice - 49,329
Technician - 205,394
Technician Plus - 128,860
General - 112,677
Advanced - 99,782
Extra - 78,750

Total Tech/TechPlus - 334,254

Total all classes - 674,792

As of January 31, 2005:

Novice - 29,435 (decrease of 19,894)
Technician - 265,739 (increase of 60,435)
Technician Plus - 52,999 (decrease of 75,861)
General - 137,763 (increase of 25,086)
Advanced - 77,523 (decrease of 22,259)
Extra - 106,121 (increase of 27,371)

Total Tech/TechPlus - 318,738 (decrease of 15,516)

Total all classes - 669,580 (decrease of 4812)

Note that these totals do not include licenses that have expired but
are in the
grace period. They also do not include club, military, RACES or other
station-only licenses.

Why not address this to "QRZ.com", rather than spamming several
Internet Newsgroups that can't help you one bit?

I felt kinda bad about being mean to Len, so I'll try to meet him
halfway with a Morse code topic. So maybe we can ressurect this old one...

I hear lots of Hams declare that Morse code is a binary mode.

It is most certainly not.

Let us look at the situation.

Is the Dit a "0"?
Is the Dah a "1"?

Is the space between characters a "0"? and the Dih a "1"? Oh wait, what
is the Dah then? Oh, and what about the space between words?

It isn't binary, and the way our noodles process it isn't binary.

It's not binary.

You just raised yourself to a higher than acceptable standard ;) You
might be the first ham to broadcast news without taking over a
frequency to do so.

In all sincerity, I commend you for your courtesy. Having been
bombarded by both ARRL and K1MAN while in a QSO, I have a bit of a
chip on my shoulder when it comes to broadcasts on the ham
frequencies. I hope you continue your practice of finding a clear
frequency for your broadcasts. If I hear you some time, I will listen
to it.

Looking at it that way, all things that can be put into a digital
program are digital, such as photographs, word processing, database, etc.

Let us put it to the test, Dave.
Write out a short sentence, or even a CQ de (your callsign) in binary
format, and let me read it right off the screen. If Morse code is
binary, it will be no problem.

This is a screen readable approximation of me calling CQ

.-.- --.- -.. . -.- -... ...-- . .. .- .--. ... . -.-

it is not binary.

But...but...but...BERT ! ! !

Doesn't that mean that someone (in the U.S.) wanting to "work" them
has to know MORSE CODE and have an EXTRA class ticket...?!?!

HEAVEN FORBID ! ! ! !
ROTMFFLMMFAO!

73

Steve, K4YZ

PS...Didya get them...???

No, bootleggers and out-of-band hams can work him too ;)

I think that many amateur operator think that; that someone running a information bulletin get on a frequency that's in uses and begins broadcasting. However, this is not true. As I stated I look for a unused frequency and I call three times if the frequency is in uses. I know K1MAN or W1AW doesn't do that. The second problem is Amateur operators who have a problems with information bulletins that are opinionated.which is a different issue.

Hi Steve,

Yep, guilty on both counts, hi. I got 'em too! Used an Elecraft K1 at 4 W
w/a Windom up 35 ft.

I'll keep an ear out for ya. :-)

Take care es...

Aren't we all? :)

I don't keep up with the League's schedule or frequencies, nor K1MAN's. I find a clear spot and transmit. It seems that many times the frequencies were clear because I was the only one that didn't know the League's schedule. On the other hand, K1MAN tried to take over the GA SSB Net frequency every night at net time. His "research" showed that that was the only logical frequency for his broadcast, which he repeated several times daily. Additionally, there was a station that began broadcasting "code practice" 24 hours a day on the CW QRP calling frequency. I am a Christian and Bible believer, but calling it code practice doesn't justify the means. Several others have come and gone over the 26 years since I have been licensed. Like K1MAN and the League, they started their broadcasts on a set frequency at a set time without regard for QSOs in progress.

Opinionated? Well, like Pavlov's dog, I (we) have been conditioned.

Thanks, again, for your courteous approach.

BTW, something just caught my memory, Correct me if I am wrong, but I
believe you said you were going to 'start' the broadcast just before
you leave for school?

Don't the rules require a control operator to be present for the
broadcast? You might double check that.

Michael Coslo <mjc5@enoughalready.psu.edu> wrote:

| I hear lots of Hams declare that Morse code is a binary mode.
|
| It is most certainly not.

It most certainly is.
...
| Is the space between characters a "0"? and the Dih a "1"? Oh wait, what
| is the Dah then? Oh, and what about the space between words?

Try looking at it at a lower level -- stop looking at the dits and dahs.

Morse code is either on or off. 1 or 0. You're either emitting a
signal, or you're not -- there's no in between.

Looking up what binary means -- http://www.answers.com/binary --

bi na ry (b'n-r) pronunciation
adj.
1. Characterized by or consisting of two parts or components; twofold.

At the lowest level, there's only two components -- on or off, tone or
no tone. It certainly fits the definition.

Considering that `tone' = 1 and `no tone' = 0 ...

Longer periods of 1's = dahs
Shorter periods of 1's = dits
Short period of 0's = space between a dit or a dah.
Longer period of 0's = space between characters.
Even longer period of 0's = space between words.

It's not a particularly efficient binary code, but it *is*, at the
lowest level, binary -- there's only two states. It's certainly not
analog, or tinary, or ...

Now, to be fair, at a higher level, you could say it has four states
-- dit, dah, space between character, space between word. Which would
be quadrary (is that the right word? is it even a real word?) But
that doesn't mean it can't be binary at another level at the same
time.

| It isn't binary, and the way our noodles process it isn't binary.

I'm not sure that the way our brain processes it is relevant. RTTY is
binary (or do you disagree there too?) and yet our brain hardly

processes it's output in a binary manner.

| It's not binary.

If you say so. I doubt I've convinced you, but it's really all a
matter of how you look at it, and if you insist on looking at it in
only one way, nobody's going to convince you otherwise.

Why do I feel like I've just been trolled? :)

Key up is "0". Key down is "1". Also known as "space" and "mark",
respectively.
>
> It isn't binary,

Depends on how you define "binary".

> and the way our noodles process it isn't binary.

Different subject.

> It's not binary.
>
Most Morse operators with any skill (that excludes Len) process a

complete character as one "sound". "didahdidit" is recognized as "L", in the same way that when you hear the word "cat", you think of the animal. The Morse operator does not think in terms of dits and dahs any more than a person thinks in terms of the consonant and vowel sounds (phonemes) making up "cat".

Of course *really* skilled Morse ops hear entire words as units of sound. And at some level, they begin to think in Morse, just as fluent speakers of a language think in that language.
Of course Len wouldn't know about that...

In article <046dnaHDg4AzqJ3fRVn-sw@adelphia.com>,
Mike Coslo <mcoslo@adelphia.net> wrote:

| Let us put it to the test, Dave.
| Write out a short sentence, or even a CQ de (your callsign) in binary
| format, and let me read it right off the screen. If Morse code is
| binary, it will be no problem.

That's actually a reasonable test. And I shall give you an answer,
though I don't think you expected one. And I'm not Dave.

Here is a binary representation of `CQ DE K' (this gets rather tedious,
so I'll only do the first few characters) :

1011101011100011101110101110000000111010100010001110101110000

And to explain that further --

dit = 1
dah = 111
space between dit/dah = 0
space between letters = 000
space between words = 0000000

So, `CQ DE K' translates to :

C 10111010111
000
Q 1110111010111
0000000
D 1110101
000
E 1
000
K 111010111
000

(the letters and newlines are there *only* to help make it readable.)

To play this back is very simple --

-- Pick a time period -- for example, 1 = 1/10 th of a second.
-- go through the list, going through each chracter --
1 = play a tone for 1/10th of a second
0 = be completely silent for 1/10th of a second

It's really that simple.

If you want a program to do it --

```
#!/usr/bin/perl -w
# C Q D E K B 3 E I A P S E K
my $string = ".-.- --.-\n-.. .\n-.- -... ...-- . .. .-\n.--. ... . -.-" ;
foreach my $c (split (//, $string)) {
if ($c eq ".") { print "10" ; next } ;
if ($c eq "-") { print "1110" ; next } ;
if ($c eq " ") { print "00" ; next } ; # Only two 0s, because the last
# character ended with a 0.
if ($c eq "\n") { print "000000" ; next } ; # ditto, but 6.
}
print "\n" ;
```

And the output of your complete CQ in binary is :

```
10111010111000111011101011100000001110101000100000000
11101011100011101010100010101011101110001000101000101110000000
10111011101000101010001000111010111 0
```

new lines and spaces are added by me only to help it fit on the
screen.

```
| This is a screen readable approximation of me calling CQ
|
| .-.- --.- -.. . -.- -... ...-- . .. .- .--. ... . -.-
```

```
| it is not binary.
```

Binary.

At a lower level, anything is digital when you look at it that way. A photograph, digital audio, whatever.

If Morse code was really digital, there would be no need to have a lower level

> Morse code is either on or off. 1 or 0. You're either emitting a

Ahh, so the space between the dits and dahs means nothing? There is definitely an "in between" It is how we determine what the words are:

..... is that the number 5, or is it HE or is it SI, or IS or EH?

You have just described more than two states.

> It's not a particularly efficient binary code, but it *is*, at the
> lowest level, binary -- there's only two states. It's certainly not
> analog, or tinary, or ...

Disagree. It isn't analog for sure, but with only a 1 and a zero, it
cant be described. Trying to describe it with 1's and 0's means that you
have to translate it. That longer dah, is not a 1. It cannot be the same
thing as the short dit. If both of them are 1's, the analogy fails

> Now, to be fair, at a higher level, you could say it has four states

I'm saying that in order to have Morse code be binary, you have to
digitize it, so to speak. You have to have a clocking action, and a dah
has to either be something other than a "1" if the dit is considered a
"1". If it was truly digital, you wouldn't have to do any of that.

> Why do I feel like I've just been trolled? :)

Isn't that what the group is about? here

Digital audio is digital if you look at it that way? Cute.

As for a photograph, a black and white photograph could be seen that
way -- after all, at the molecular level, a molecule of pigment is
either there or not there. It's quantized.

But no, not everything is digital. A specific sound isn't digital --
sure, you could approximate it with a digital stream, but ultimately
it's just an approximation, no matter how fast your digital stream is.

| If Morse code was really digital, there would be no need to have a
| lower level

Are you even thinking about what you're saying here?

If there's only one level, then a morse code signal would be just a
constant tone. It's hard to put much information into a constant,
unchanging tone. If you want to transmit some information, you're
going to need to have at least two states to choose from.

| > Morse code is either on or off. 1 or 0. You're either emitting a
| > signal, or you're not -- there's no in between.
|
| Ahh, so the space between the dits and dahs means nothing? There is
| definitely an "in between" It is how we determine what the words are:

The space between the dits and dahs is `off' -- either 1, 3 or 7
zeros. The dits and dahs are `on', either one or three 1s.

Look at my other post where I converted your CQ call to a binary
representation of it.

| ..... is that the number 5, or is it HE or is it SI, or IS or EH?

If you feel that I claimed that the spaces are unimportant, then you
did not understand me very well. Spaces are represented by a number
of zeros, and dits and dahs by a number of ones. Binary.

| > Longer periods of 1's = dahs
| > Shorter periods of 1's = dits
| > Short period of 0's = space between a dit or a dah.
| > Longer period of 0's = space between characters.

| > Even longer period of 0's = space between words.
|
| You have just described more than two states.

Sure -- I was trying to explain how it all boils down to two states.

RTTY usually carries information encoded with BAUDOT. (You do believe that RTTY is digital, right? Even with that 1.5 baud stop bit?) Each BAUDOT character is chosen by 5 bits -- that's 32 states, and then there's the state of the shift, which gives you about 62 states (64 - 2, since two states don't matter.)

So RTTY/BAUDOT uses somewhere between 32 and 64 states. But you do believe that that RTTY and BAUDOT are binary modulations or codes, right?

| > It's not a particularly efficient binary code, but it *is*, at the
| > lowest level, binary -- there's only two states. It's certainly not
| > analog, or tinary, or ...
|
| Disagree. It isn't analog for sure, but with only a 1 and a zero, it
| cant be described.

... but I just did in my other post. It was a bit tedious, but hardly impossible.

| Trying to describe it with 1's and 0's means that you
| have to translate it. That longer dah, is not a 1.

That is correct -- dah is not 1. It's three 1s in a row, followed by at least one 0.

| It cannot be the same thing as the short dit. If both of them are
| 1's, the analogy fails

Sure. The short dit is just a single 1, followed by at least one 0.

| I'm saying that in order to have Morse code be binary, you have to
| digitize it, so to speak. You have to have a clocking action, and a dah
| has to either be something other than a "1" if the dit is considered a
| "1". If it was truly digital, you wouldn't have to do any of that.

Have you looked at your morse code key lately? It has two positions -- on and off. That alone should be enough to let you realize that it's binary.

Things like PSK31 and RTTY/BAUDOT aren't any different, except that the computer does the translation down to the binary level rather than your brain and your finger.

It could be argued that the human brain doesn't easily deal with binary codes. Which would make sense -- many of us had a hard time learning morse code, even at the slowest possible speed. Yet it's only about 40 characters, which shouldn't be hard to memorize at all.

even the 'real' digital modes have a clocking action. how else do you know when one character ends and another starts? the one big oddity of morse is that the characters are unequal lengths so it is not easy to make a simple clock mechanism to decode them like it is for baudot or ascii codes. then of course another oddity is that it is often sent by hand (or at least it used to be) so the timing varies even within a short message making it even harder to decode mechanically. however hscw and very low speed or coherent cw are normally machine encoded and decoded and rely on very exact timing.

I am very sure that QRZ.com is very much aware that they must not charge
your credit card until shipment has taken place. The fact that they did
tells me that you need to report to them that nothing has been received and
ask them to trace the shipment. They are just too reputable, a break down
in the shipping path has occured.

But, but, but...

I've never written for a professional radio journal, so Len can hardly
ride my coattails.

Look up what "Morse Code" means. If you can. The FCC no longer has a
definition.

BTW, something just caught my memory, Correct me if I am wrong, but I believe you said you were going to 'start' the broadcast just before you leave for school?

Don't the rules require a control operator to be present for the broadcast? You might double check that.

| Doug, please perform the same exercise for all variations of the
| Farnsworth code. Thanks.
```

Um, I'll pass :)

I'm not sure what the value would be, but if you really think it's worthwhile, you can work out the timings yourself, and use my program to print out your 1s and 0s. (perl is available on most operating systems, including Windows, if you need it.)

All you'd have to do is change the `00' and `000000' print statements to include more zeros. (But don't forget that there's already a 0 printed as a part of the last character when calculating the timings.)

In any event, the expected timings for `standard' morse code are well defined -- a dah is 3x as long as a dit, the space between dits and dahs is as long as a dit, the space between characters is 3x as long as a dit, and the space between words is 7x as long as a dit. The Farnsworth method merely makes the 3x and 7x gaps longer.

(My little program uses \n's to indicate the end of a word. This is needed because the `.-.- --.-' notation really has no standard way of indicating the difference between a 3-dit long pause and a 7-dit long pause.)

--
Doug McLaren, dougmc@frenzy.com
internet, eh? I hear they have that on computers now.

Odd, the old definition of Morse Code didn't use the terms "0" and "1",
nor "mark" and "space." All the timing was in terms of the length of a
single "dit." Hmmmm? Almost makes one think that Jim don't know Jack
about Morse Code. But he'll tell us otherwise.
Just more Miccollis revisionist history, I guess.

Hey Toad,

If you want to be a broadcaster, here is a far out idea.....Get a license
to be a broadcaster.

If you want to express your opinion on ham radio, about ham subjects, here
is a radical thought.......get on the air, engage someone in
conversation....and here it is....express your views. Far out eh?

I didn't get time because I had to finish some homework.I sorry but school
comes first.But here's the times I will be on

Fridays 7.00pm to 8.00pm CST
Saturday 4.00pm to 5.00pm CST
Sunday 4.00pm to 5.00pm CST
repeat 8.00pm to 9.00pm CST

Todd

1132. N9OGL working on a Petition for Rulemaking

Newsgroup: rec.radio.amateur.policy
Date: 2005-02-03 03:04:42 UTC
From: Todd Daugherty <toddaug@consolidated.net>
Message-ID: <4201955d$1_2@127.0.0.1>
Source record: 102693

Idea's for a Petiton for Rulemaking
Now, I've talked offen both here and in my broadcast about content control. So I'm looking for input on a Petition of Rulemaking that I working on that would "fix" the problems. Here's want I looking at:

1. Amend 97.3(a)(10) The definition of Broadcasting. The definition for the term broadcasting is a gereric definition and sometime could be vague.

2. Amend 97.3(a)(25) The definition of Information Bulletin. This definition is also vague. Because there are some ham operaors who transmit information bulletins that is "their opinion" (Some amateurs believe that is illegal and is a form of broadcasting) while there are other amateur radio operators who believe information bulletins are "news bulletins". The next would be is the limitation on the content reasonable that it dosn't violate the First Amendment and Section 326 of the Communication Act of 1934 as Amended. (47 U.S.C. 326)

3.Amend 97.111(b)(6) The rule dealing with information bulletins. Amending of this rule is needed to clarify the changes in 97.3(a) (10) and 97.3(a)(25)

So what do you think????

Todd N9OGL

In what world is "C" = dit-dah-dit-dah ??? Send that in an
FCC-administered code test and fail.

I think your explanation kind of proves my point.

You do a pretty good job of showing how a person turns Morse code into digital 1's and 0's. But that does not make Morse code digital any more than doing the same for an image makes a photograph digital. The Morse code had to be translated into binary.

The binary output of that CQ in binary doesn't look like anything that any Ham I know can read. If you are coding a CW reader, the output will be translated into words. If Morse was binary, the op could just read

the string of 1's and 0's.

> respectively.

Unfortunately, there are two separate "1" states, and the zero state is not a constant thing.

There is the matter of time. A zero might me the space between letters, or one half of a dit. It might also mean the space between words. All different things.

That Morse code can be turned into binary is not at argument here. It obviously can, just as images, emails and everything else we do on the computer. Are they binary because someone has written a program to turn them into strings of 1's and 0's?

>>It isn't binary,
>
>
> Depends on how you define "binary".
>
>
>>and the way our noodles process it isn't binary.
>
>
> Different subject.

Not really. If you look at the string of 1's and 0's that Doug posted as the binary result of my hypothetical CQ, is that something that you would recognize as that CQ? That string IS binary.

Why does the - and . method of typing out the code convey the information? the dashes and the spaces convey time information to the person looking at them. I'm counting more than two states here.

Now send *that* in a QSO. Using *only* a 0 state or a 1 state. 8^)

Nice catch. I did pass element 1, but I never claimed to be good at
it. In any event, I'd thought I just cut and pasted his CQ string,
but obviously I made a mistake somewhere.

But to retort --

1) The FCC doesn't administer ham radio tests any more
2) The tests are generally receiving, not sending, and
3) You don't need 100% accuracy to pass

:)

(Wow, something actually related to policy!)

You >>>converted<<<. That is the core of the issue. I have no argument
with what you did or what others have done to take a input of Morse code

and convert it into a digital form.

> | ..... is that the number 5, or is it HE or is it SI, or IS or EH?

I completely understand that the spaces are of equal importance to all
the other states.

> | > Longer periods of 1's = dahs
> | > Shorter periods of 1's = dits

Understood. But you have to write software to take that Morse code
signal and convert it or boil it down or whatever.

> RTTY usually carries information encoded with BAUDOT. (You do believe

I wasn't precise there. You have to time the signal, and assign
multiple 1's and 0's to different parts of the sent signal.

> | Trying to describe it with 1's and 0's means that you
> | have to translate it. That longer dah, is not a 1.

So you convert a dah into 3 1's and a zero. This sounds more to me like
a conversion than anything else.

> | It cannot be the same thing as the short dit. If both of them are
> | 1's, the analogy fails
>
> Sure. The short dit is just a single 1, followed by at least one 0.

A 1 and a 0. Like I said it's a conversion.

That it is not a difficult conversion is not the point.

> | I'm saying that in order to have Morse code be binary, you have to

> it's binary.

Just a second ago. I have an Iambic key, so that kind of clouds the
issue. I have a key for dits, a key for dats, and nothing happens if I
don't touch either.

> Things like PSK31 and RTTY/BAUDOT aren't any different, except that

I agree Dave. I'm a little familiar with the digital world. The
oddities of Morse that you mention are both the blessing and curse of
the mode. No argument on the ability to convert Morse to digital, and
while the machine sent stuff is not too hard to translate, it is amazing
what the human mind can do when recieving a signal from a person with a
bad fist.

Good point Brian. Farnsworth will have a different representation in
timing. While the human mind will interpret Farnsworth fairly easily,
the software may have some problems?

In article <MZudndXjAr2TPJzfRVn-gA@adelphia.com>,
Mike Coslo <mcoslo@adelphia.net> wrote:

| > Key up is "0". Key down is "1". Also known as "space" and "mark",
| > respectively.
|
| Unfortunately, there are two separate "1" states, and the zero state is
| not a constant thing.

Your key is either up or down. There is no in between. That alone is
enough to say `binary'.

As for `two seperate 1 states', it's just that one is one 1 state, and
the other is 3 1 states in a row.

| There is the matter of time. A zero might me the space between
| letters, or one half of a dit. It might also mean the space between
| words. All different things.

It's the number of zeros in a row that signifies that.

| That Morse code can be turned into binary is not at argument here. It
| obviously can, just as images, emails and everything else we do on the
| computer.

An image or file on your computer is already binary, pretty much by
definition. But the image you see out your window is not -- it's
analog, and while you can approximate this image with a binary stream,
you can never match it exactly.

| Not really. If you look at the string of 1's and 0's that Doug posted
| as the binary result of my hypothetical CQ, is that something that you
| would recognize as that CQ?

If you played it audibly, yes, you would notice it as a perfectly
timed morse code CQ (my mistake with the C not withstanding.)

Visually, it's not the format that people are used to seeing, so they
don't recognize it at first. Not surprising.

| Why does the - and . method of typing out the code convey the
| information? the dashes and the spaces convey time information to the
| person looking at them. I'm counting more than two states here.

Of course, Morse code is sent as a intermittent tone, RF carrier, or
light. It's *not* sent with strings of periods, dashes and spaces --
that's just a simple way of writing it on paper.

When you look at the tone, carrier or light, the item is either there, or it's not. Two states. Binary. This is not something that can be rationally denied.

However, groups of these two states are combined into five states -- dit, dah, intra-character spaces, intra-word spaces and intra-sentence spaces. This can't really be denied either, and this is how people generally think of Morse code -- dits and dahs.

This is where the argument lies -- the `I see two states -- binary!' people look at the first part -- the carrier itself. The `It's not binary! It's dits and dahs and spaces' people are looking at what the combinations of the binary states give them, and that's how humans generally view it.. Both views are correct, so a claim that one view is wrong is incorrect.

Morse code gives you a way of turning a series of binary states (on or off) into text. ASCII, EBCDIC, BAUDOT, UTF-8 and oodles of others do the same thing. Morse code is just as `binary' as they are, but it just happens to be more suited to human use.

Ultimately, it's a pointless argument, because whatever Morse code is and is not, people use it, and they agree on what sequences indicate what letters (of course, this wasn't always the case, but that's another story), and that's pretty much all that's needed for it to work, and so on that note I'll attempt to remove myself from the discussion.

>
> Is the space between characters a "0"? and the Dih a "1"? Oh wait, what
> is the Dah then? Oh, and what about the space between words?
>

It's a form of pulse width modulation. Space between
characters would be a "low" or "0". Characters are
"high" or "1". A dit would be a single "1", dah would
be "1,1,1". Spaces between dits and dahs in the same letter
would be a single "0". Spaces between letters would be
"0,0,0". The typical letter is about 9 zeros or ones
long, and add 3 more zeros for the space on one side.
So the "1" or "0" bit rate is about 12 times the WPM
rate. 5 WPM would be 60 bits a minute, or 1 bit/sec.
20 WPM would be 4 bits/sec. Rather slow compared to
other machine readable/sendable digital modes, but
Morse can be read by ear and requires only simple
equipment. Big selling point back in the vacuum tube
radio era, but not so much today with high tech radio
equipment.

You have to define "state". If "key up" and "key down" are the states, it's
binary. Time isn't the factor you make it - look at how Baudot works.
>

Doesn't have to be. It's a time code.

>There is the matter of time. A zero might me the space between letters,
>or one half of a dit. It might also mean the space between words. All
>different things.

No. The characters are built from the basic elements, which are key up and key
down, just like, say, Baudot RTTY.
>
> That Morse code can be turned into binary is not at argument here. It
>obviously can, just as images, emails and everything else we do on the

>them into strings of 1's and 0's?

Their basic transmission form is binary, same as Morse.

A non-binary code is one that has more than two *transmission* states, like
QPSK. Which is typically implemented as 0, 90, 180 and 270 degrees shift. Four
transmission states rather than two.
>

It's not the simplest way, though. It shows the time differently.

>>>It's not binary.

UNQUOTE

The statement said that Lennie has a history of taking other people's work. He proved it in his warping of your "endearment". He didn't even give you, his one and only NG "buddy", credit for the work.

So....What does YOUR lack of publishing credits have to do with Lennie's irresponsible and unprofessional behaviour.

> Actually, "Avenging Angle" applies to nearly all PCTA extras.

Actually, it doesn't.

> All are self-righeously Right even if they aren't in a triangle of > being oh-so-superior
to NCTAs.

Actually, they aren't. I'm sure it seems that way to an outsider with
an ax to grind.

> All who don't worship at the Church of
> St. Hiram are, to them, heretics and infidels, unworthy of surviving
> on the same planet as the PCTA. They are all Right Angles but
> perpendicular to the plane of existance of reality of today.

Actually, there is no "Church of St. Hiram". You may continue to live
on the planet but you aren't involved in amateur radio.

> Much earlier in here I'd made mention of one Elfren Saldivar (hope
> name is correct), the "Angle of Death" at Glendale Memorial
> Hospital in this area. He was a nurse who offed a bunch of
> elderly patients "to ease their suffering." Lots of them. Registered

No, it doesn't sound familiar to anyone here. We don't have a nurse who
has killed any patients.

> So...we've got the "forever marine" spending the weekend shouting
> epithets using pejoratives not in his ethnic experience, always
> being the "avenger" for the "service."

"We've got"? Do you have a Vibroplex in your pocket?

> We've got the prissy never-
> served busy acting like Nun of the Above, rapping the knuckles of

Shouldn't that be "message knuckles"?

> We've got the "forever ham"
> of four decades hamming it up into great "superiority" but who
> never learned a thing about diplomacy in the State Department
> "foreign service."

I've not been a ham forever. I've been a ham for over four decades and I'm not quite 56. If I'd been a ham for two days, I'd be your superior in amateur radio. You aren't a radio amateur. I learned plenty about diplomacy in the Foreign Service, not "foreign service" though that was not my area of expertise. Nothing compels me to suffer rude churls. Finally, it is not the "State Department 'foreign service'" but the Foreign Service of the United States. Don't you get anything right?

> We've got the "university lecturer" who survives
> the terrible storms that regularly destroy everything in Hawaii
> except the ham rigs and assists other hams in regards to USPS

Why is "university lecturer" in quotes, Leonard? Are you being forced by your nature to live up to the N2EY profile?

> We have the coslonaut who wanted hearty
> congratulations for a feat he hasn't yet begun but was upset when
> he didn't get it.

Aren't you stretching the truth more than a little? Weren't you, in fact, one who told him that his proposed feat couldn't be done? Didn't you launch into a lengthy diatribe only to have to eat your words when evidence was presented which contradicted your claims?

> A nice jolly group of down-lookers in their own
> PCTA "blog" happily giving each other high-fives for being so
> intrinisically superior to all others.

This isn't a blog, Leonard and no one here has suggested that he is superior to all others.

> The major "superiority" attribute
> is cussing out "civilians" not possessing the right ham hobby
> papers to show to their raddio kopp schutzstaffel.

It isn't that you don't have the right papers, Len. It is that you have no credentials in amateur radio. You aren't a part of amateur radio.

You play no role in amateur radio. You aren't involved in amateur
radio.
Oh yeah, Godwin invoked.

> They can flog each other in this blog for all I care. [some do]

This isn't a blog and you must certainly care. You've shown up here for
a long, long time.

> All their little names are familiar to all who look into this blog.

This isn't a blog and you've generated more "little names" than everyone
else here combined.

> [it long since dropped out as a discussion place, became a chat
> room reserved for their highnesses, a group blog] They've
> worked hard at earning all those names and should be proud of
> them. :-)

This isn't a chat room and it isn't a blog. :-)

> any "airwaves," only on computers, saved from direct physical
> harm through time and distance by insulting all who don't agree
> with them. Hear them roar! :-)

Nope, you have it wrong again. The rest of us may discuss amateur radio
policy here or on the amateur bands. You may not. The rest of us may
discuss anything on the amateur bands. You may not. By the way, did
you mean that if we were in the room with you, we'd be in danger of
direct physical harm? Did you plan to bore us to death?

Nothing in the Rules says that someone can't be called into an FCC office and administered an individual test if the FCC deems it necessary.

> 2) The tests are generally receiving, not sending, and

Generally but not always. It's up to the examiner.

> 3) You don't need 100% accuracy to pass

You've never taken a test that I administered... <ggg>

The ultimate is to record what the applicant sent and then have the applicant copy it back....

Since we're on the subject, who on earth would think I was looking for congratulations on something I hadn't done? That's weird. My ill fated attempt to garner a few ideas in the group was simply that.

It was a failure in that respect. But as in all things, there is good to be taken away from it. Just a little personal practice in dealing with the obtuse or deliberately antagonistic. Those involved may choose which one they want to be.

And for those who think it was some kind of stupidity to expect anything other than obtuseness or deliberate antagonism, the chance was offered to act otherwise. That a person would choose that puts them in league with the bottom dwellers of the group.

Don't like it? Too bad, deal with it.

As far as I know, Morse code did not "become digital" until some people wanted to make it look as if it was more advanced than it is. Until then it was as you describe.

In the translation. I don't read morse code that way while I'm
listening. The computer "listens" that way.

Two states of different length. The radio does not send 0's. It simply
sits there waiting for the key so it can send a carrier of differing
lengths of time.

> However, groups of these two states are combined into five states --

Certainly. But Morse code, which was invented as a human translated
code, does not qualify to me as a 1 or 0 state.

Here is my rationale:

If the key is up, the radio is certainly not sending 0's.

This brings up an interesting paradox...
If the lack of a signal is a 0 state, then when no signal is being
transmitted, you are receiving zeros until someone sends something.

I grant that a dit might be a 1.

If a dah is 3 1's, why do we not send 3 dits. I either hold the key down
longer or press the dah switch on my keyer. It sends out a longer pulse,
not 3 1's.

Describing the signal as how many 1's a signal is, or how many 0's
indicate intercharacter or interword spacing is a method of translating
the varying length Morse code signals into digital format.

Of course not! I thought it might be something better to talk about
than whether Len thinks we're "jackboot thugs" tho'! 8^)

|
| As far as I know, Morse code did not "become digital" until some people
| wanted to make it look as if it was more advanced than it is. Until then
| it was as you describe.

You're confusing your terms now. Digital and binary are related, but
not the same.

This defintion of `digital data'

http://www.answers.com/main/ntquery?dym=0&cid=1421987736&method=6

definately fits Morse code, both at the `on' and `off' level and at
the `dit' `dah' `short space' `medium space' `long space' level.

Digital also means `having to do with fingers', and Morse code is
usually sent using one's fingers ...

Of course, the terms digital and binary didn't really become commonly
used until computers did. Considering that Morse code was born in
1832 or so, it's not surprising that people weren't thinking of it in
computer terms for a while.

Ultimately, terms are getting confused all over the place. The terms
CW and Morse code are used interchangably, when it's really more
accurate to say that CW is to Morse code as RTTY is to Baudot. But
ultimately it doesn't matter, because however you define it, people
use it to talk to each other and it works.

kelly@dvol.com writes:

>> The big question is: what does it matter if Morse is binary or not?
>
> . . . finally . . of course not. But you already knew that . .

Quite true. The coslonaut (reaching for the threashold of space
through surplus helium balloons) originally posted a troll message
to liven up this "members-only" chat room cum group blog.

Webster's New World Compact School and Office Dictionary
(1989) has the definition of BINARY as following:

"1. Made up of two parts: double 2. designating or of a number
system in which the base used is two, each number being
expressed by using only two digits, specifically 1 and 0."

As used in all electronics, the first definition is used with an
emphasis on STATE of something, such as on or off, there or
not there. Two-state.

In on-off keying (OOK) CW the carrier is either present or not
there. Two states.

In PSK morse code, the carrier is either phase-shifted or not
phase-shifted. Two states.

In MCW the tone is either there or not there. Two states.

In the original Morse-Vail Telegraph System (beginning 1844),
there was either current flowing in the wire lines or not flowing.
Two states.

In later "polar keying" telegraphy, the current was either flowing
in one direction or flowing in the opposite direction. Two states.
However, such "polar keying" (originally "polarized keying"), those
are implemented as TRINARY since there is the state where no
current is flowing in the loop.

It is not known if Reggie Fessenden invented polarized keying in
1900 (Rev. Jimmie Who will be sure to sermonize on that later),
but polar keying was often used in old teleprinter wired systems.

Morse code is definitely BINARY. Binary does not refer to the
time or duration of maintaining either of two states.

None of that really matters to any policy discussions. It matters greatly to those chat-roomers or morse-bloggers who MUST fill space with all kinds of miscellaneous dreck subjects reveling in the sanctity, efficacy, nobility of an archaic communications system coming up on its 161st anniversary of existance. It's so damn good that every other communications service uses morse code, right? :-)

Meanwhile, let's all give hearty congratulations to the coslonaut for having achieved a 100,000 foot attitude!

> Nothing in the Rules says that someone can't be called into an FCC
> office and administered an individual test if the FCC deems it
> necessary.
>

An FCC field guy (that you know of) decided that a wife
of a friend of mine needed to be retested on 5WPM code.
At the time (early 70's) the FCC test office rarely if
ever did 5WPM, and the examner had to dig up a 5WPM
paper tape (with punched holes). Seems the tape was
bad and the machine sent trash instead of code, but the
examiner himself didn't know code and decided that she
couldn't copy code and failed her. "Broken tape machine,
yeah sureeee....."

If the tape were played backwards (a code machine my
father used used two spools, a supply reel and take
up reel) it would produce some copyable characters
(A for N) and others would be trash. Someone forgets
to rewind a tape, and later someone else plays it for
a test. Sounds like code to someone who doesn't know
code.

Well Phil, Since I didn't get a broadcast license I guess you fucking ham operator are going to have to deal with me.
As for the language I'm pissed off about the whole deal and I'll continue to be pissed off. Here you have a fucking agency going to court telling a judge that all a person has to do is apply for a license and ask for a waiver. But when a person does apply for a license and a waiver they don't consider it. Bottom line the FCC ARE A BUNCH OF FUCKING LIARS!! so Phil go to your old bosses or perhaps that dumbass Hollingsworth is on here and you both can tell your bosses that I said that they SHOULD EAT SHIT AND DIE!
I often get sick of all these fucking ham operators who bitch and whine about the code issue, the changes in the amateur license structure. These little fucker don't realize how fucking easy they've got it. With that said, just a reminder since I don't have a broadcast license that I'm going to uses the ham bands. So my opinion is you and the FCC is to go fuck yourselves.

If it's who I think it is - someone who had a history of deciding what other hams "needed" - he was a traffic handler and contester who knew code very well. In that era the only FCC field folks who were not required to be Morse-qualified were the clerical staff.

Coslo, do you have a reading defect? Here's what I wrote:

==========
Webster's New World Compact School and Office Dictionary
(1989) has the definition of BINARY as following:

"1. Made up of two parts: double 2. designating or of a number
system in which the base used is two, each number being
expressed by using only two digits, specifically 1 and 0."

As used in all electronics, the first definition is used with an
emphasis on STATE of something, such as on or off, there or
not there. Two-state.

In on-off keying (OOK) CW the carrier is either present or not
there. Two states.

In PSK morse code, the carrier is either phase-shifted or not
phase-shifted. Two states.

In MCW the tone is either there or not there. Two states.

In the original Morse-Vail Telegraph System (beginning 1844),
there was either current flowing in the wire lines or not flowing.
Two states.

In later "polar keying" telegraphy, the current was either flowing
in one direction or flowing in the opposite direction. Two states.
However, such "polar keying" (originally "polarized keying"), those
are implemented as TRINARY since there is the state where no
current is flowing in the loop.

It is not known if Reggie Fessenden invented polarized keying in
1900 (Rev. Jimmie Who will be sure to sermonize on that later),
but polar keying was often used in old teleprinter wired systems.

Morse code is definitely BINARY. Binary does not refer to the
time or duration of maintaining either of two states.

None of that really matters to any policy discussions. It matters
greatly to those chat-roomers or morse-bloggers who MUST fill
space with all kinds of miscellaneous dreck subjects reveling in
the sanctity, efficacy, nobility of an archaic communications
system coming up on its 161st anniversary of existance. It's so
damn good that every other communications service uses morse
code, right? :-)
=========

Two states. In any of the states of the United States and in all
the "airwaves" of the universe.

On/Off...1/0...tone/no-tone. Two states.

Now if you want to continue arguing this inapplicable non-discussion,
please go to rec.nonsense.angels.dance.on.pin newsgroup and live
it up.

Morse code is NOT high technology. It was devised out of a need
to use very primitive electrical devices to communicate. Some 52
years after the first morse code was used, very primitive early radio
technology used morse code to enable communication by radio.
[that was in 1896 and began the Mythology of Morse some 109
years ago, before the invention of the multi-element vacuum tube
and well before the first transistor]

Put the subject to rest. RIP.

You've gotten congratulations for achieving a 100,000 foot attitude.
if you need more hire a press agent and get into the national news.

Try not to inhale all that left-over helium.

Specifically 1 and 0, indeed.

That is why when we try to make Morse code computer compatible, we interpret the dah or dash as 3 '1's" in length, (followed by a 0) the dit or dot as 1 "1" (followed by a 0, and various numbers of 0's for spaces in between letters or numbers, or words.

> As used in all electronics, the first definition is used with an

> there. Two states.

No. At least to only two states. Obviously it is either there or not there.

It has a time component that is what carries the information. The "there" or "not thereness" of the signal is one thing. The relationship of one carrier pulse length to other carrier pulse length, and to the intercarrier lack of pulse time is what is important.

> current is flowing in the loop . . .

Welp then that means CW is a tertiary mode. Given a slice of RF spectrum space in which CW is being transmitted there are actually three states: Key down, key up and the noise between up n' down. OYeah, the noise matters as a "state".

> Morse code is definitely BINARY. Binary does not refer to the

99% of people are that way. The FCC found that nobody
ever failed a sending test if they passed a receiving
test. So they decided why bother with sending.

ACHTUNG ACHTUNG ACHTUNG

Effective since the creation of the FRC and the institution of
Amateur Radio licensing, it has been forbidden for unlicensed persons
to use the Amateur Bands.

Another Regulatory matter you skipped over, Lennie.

What's with you, Your Scumminess? Didn't they teach you radio
rules at professional radio school?

> Violators will be arrested, imprisoned, convicted of Crimes
Against
> the State (as soon as the judges finish their DX contacts with
> illegal Frenchmen), and shot.

Not shot, however the FCC has demonstrated a willingness to seek
the incarcertaion of those who violate their rules.

Your age might get you off of jail time, but your income, alleged
summer home, etc, will ensure that the price of the NAL sticks. Too
many assets to claim poverty.

> There is NO appeal.

Sure there is...even for the UNappealing such as yourself.

> >The rest of us may
> >discuss anything on the amateur bands. You may not.
>
> <repeat of standing orders effective immediately>

Repeat of reminder of rules that those unlicensed commissioners
you are always ballyhooing about have enacted and enforce.

Those rules apply even to the UNlicensed (alleged) professionals
such as yourself.

> >By the way, did
> >you mean that if we were in the room with you, we'd be in danger of

And here, once again, we have Lennie dead-to-rights in yet another
"Do As I Say, Not Do As I Do" rant.

Lennie will be the first one to yell "You're not a moderator!",
yet he has absolutlely no reservation about telling anyone else to shut
up or to "take it elsewhere".

Never mind that Mike never made such accusations or suggestions to
Lennie.

His right to "freedom of speech" notwithstanding, Lennie has no
business here. He is not a licensed Amateur, has no practical
experience in Amateur Radio, and he frequently demonstrates
incompetence in matters of Amateur practice, policy and regulation.

In short, he's a putz.

If I recall correctly the lady that did my test was a member of the
clerical staff.

From the above, has there been a change in the CW requirement for
field staff? I know when I was offered a Field Engineer job they were
happy I would not have to study CW (I turned it down, the idea of paying
my moving and transfer expenses rankled me)

AFAIK the "technical agents" (used to be called engineers or technicians) still have to qualify at a minimum of 20 wpm text and 16 wpm code groups. The non-technical agents (used to be called Public Contact Specialists) and the clerical staff do not have to be code-qualified although I know several who are code-qualified from being licensed ham operators or once were monitoring station technicians.

As far as relocation - when I hired on in 1967 they paid my transportation and moving expenses cross-country. It may have changed by the time that you were contacted.

And it means that information is being sent with no energy used in the
sending. Hence the paradox. Of course if we are dealing in quantum
matters, there is not as much paradox, except for why it is all 0's
instead of a 1 here and there.

> It sends three dits with no space between them.

Only after you decide that the signal is digital for the sake of
calling it a binary or digital signal. It isn't sent that way, and when
you listen, you don't think of it that way.

The only time you need to think of it that way is when you decide to do
something with a computer, and need to translate the Morse code signal

into something that the computer will understand.

In the computer it is.

In the human brain it isn't. The human brain decodes the dits and dahs
and interletter and interword spaces quite differently. No 1's or 0's
required

But my main purpose is to get a little traffic on the list that isn't
the bottom feeders type stuff. I enjoy the occasional good row that
develops. I wouldn't mind seeing that continue.

Note that almost everyone disagrees with me, the thread has been
largely civil discussion.

I don't doubt it. Set me down with a written piece and I can send pretty quickly - easily at the old Extra rate. When ad-libbing, I'm a bit slower. Unfortunately I still fly a little behind the plane when recieving! 8^(

You'll have to content yourself with carrying out your self-anointed
advocacy for something or other here, Leonard. Your lack of an amateur
radio license prevents you from doing it on the ham bands. You do as
you can, the rest of us will do as we like.

> >The rest of us may
> >discuss anything on the amateur bands. You may not.
>
> <repeat of standing orders effective immediately>

Face it, Leonard, this is your only forum and nobody is paying your
views on the regulation of amateur radio much credence here. Did you
notice the lack of response from those lurkers you wrote of earlier?

> >By the way, did
> >you mean that if we were in the room with you, we'd be in danger of
> >direct physical harm?
>
> ...only from all the PCTA extras shooting themselves in the foot
> with their arrogant, dictatorial manner! :-)

That's funny. When you wrote, "They ham it up, not on radio, not on
any 'airwaves,' only on computers, saved from direct physical
harm through time and distance by insulting all who don't agree

with them." it didn't seem to refer to PCTA Extras doing anything to each other.

> All sorts of small-caliber projectiles have been ricocheting all over
> and a distinct danger to all in that "room." :-)

What room? :-) Do you fancy yourself a large caliber guy? :-)

> >Did you plan to bore us to death?
>
> No, Kolonel Klunk, you do that SO well. Far be it for me to try and
> upstage das Grate, Full Dead. :-)

:-) :-) That doesn't make sense, Leonard. How can I be "saved in time and distance from direct physical harm" from myself? :-) :-)

Enough of that. We still don't have a nurse who has killed patients.

The Marine among us seems to have a pretty solid understanding of how to use the word "putz".

Our "university lecturer" is actually a university lecturer.

Jim isn't female nor a nun. You come off as being the prissy one.

I've not been a ham forever though I'm certain that more than forty years sounds like a long time to one who has never obtained an amateur radio license.

My specialty in the Foreign Service was communications, not diplomacy. If it is diplomacy you want, drop Dr. Rice a line. I should warn you though that she doesn't seem the type to put up with your foolish little old man routine either.

Mike Coslo wrote of sending a helium-filled balloon to 100,000 feet. No wishes for congratulations on a before or after basis were written by him. You did, however, tell him that it couldn't be done. That statement
really came back to bite you in the can. You get quite a number of things wrong.

You have no right to suggest that radio amateurs, posting in an amateur radio newsgroup should be spending their time on the ham bands. Let me explain it to you Sparkie:

newsgroup amateur radio stake in
access access amateur radio

Actually I would have had to waive the relocation required by
regulations, since I would have been a transfer from the Navy. I
declined to, they declined to finalize the offer.
I did have to laugh, the manager in question was elated over a budget
increase that amounted to the "pin" money my minor project had. But then
I was DoD under Regan and he wasn't

Try the null hypothesis. Are you saying the silent periods are
valueless?

Poor Stebie da Avenging Angle sees only the WRONG in his opponents. Tsk.

>> So....What does YOUR lack of publishing credits have to do with
>> Lennie's irresponsible and unprofessional behaviour.
>
>Everything. Had I been published in a professional journal, can you be
>sure that he would have stolen my work?

Brian, you have to realize that any printed article to Stebie is new to him, therefore everything he reads is a "first principles" topic. He imagines all those articles are stand-alone and cannot ever be commented upon...therefore the slightest act of just mentioning them are what he considers plagiarism. :-)

Coupled with his mindset of "all opponents do wrong in anything," he is constantly in outrage that opponents exist.

==========

In printed publications sold all over the USA and worldwide, many are involved in viewing and checking any submitted work. Every publisher is subject to copyright laws and prosecution thereof if court action is taken. Publishers don't want that. Authors don't want that.

Stebie wants to feed on his perceived "wrongness" of fair-use mentions or references of other works. That's just ignorance on his part (or his sense of right/wrong is so warped by hatred of opponents that he cannot tell which is which)...since fair-use mentions and references have long been a part of published papers and articles. [at least over the last century] As to what constitutes fair-use, that is covered in Copyright Law under Title 17, United States Code. So is references and mentions of other published works.

For periodicals, the common convention is for publishers to request "first rights" as part of compensation of authors. That means the publishers have "first dibs" on publishing that work and can reprint that work as many times as they wish. Authors can publish or get published that same work once the publisher-puchaser has printed it the first time. There are many variations on the author compensation and some may include sole proprietorship of an author's work. [pecuniary compensation falls under "work for hire" rules by the IRS and is therefore taxable income...mentioned as a sidelight] Some authors can cut a deal with publishers so that authors have free rein on republishing, but that is rare.

What most readers overlook is that a published work can be changed in many ways. Schematics can be redrawn, diagrams can be done differently, different accompanying photographs used, and text rewritten. That changes the nature of the "work." Determination of whether such work is a "copy" of the original published (and copyrighted) is a very long, studious, and arduous proceeding (not to mention expensive) which is hardly ever done. It isn't worthwhile unless it involves millions of dollars.

The ARRL gets away with a benign sort of plagiarism (but isn't such, per se) by getting ALL rights to publishing (usually) for article in their periodicals. They do reprint periodical articles in changed form in the Handbook and other book-form publications...and the original author gets NO money under that compensation form...and usually is uncredited for the work in the ARRL's republishing. That's not a "slam" at the League but is standard practice by them and has been so for years. It's business...and worthwhile to them...but seldom so to the authors.

Do you think Hartley, Pierce, or Colpitts (or their estates) get anything for all the repeated articles on the whichness of the what in oscillators? Nothing. Nada. Zip. Yet the articles pop up now and then and are found in all kinds of electronics texts. Anyone can mention those names, draw schematics for them, make them, measure them and it is NOT "plagiarism" to do so...unless such work is a direct copy of a previously-published article on same.

In tutorial articles, basic circuits can be explained in a number of ways. Tutorials are far from "first principles" kind of subject and are done for the benefit of readers who wish to further their knowledge of a particular subject. Tutorial articles aren't plagiarism of any sort unless they are an obvious copy of something already published. Each presentation in a tutorial, the explanations, are unique. The uniqueness can be copyrighted.

That's the way part of publishing works and it's been that way for some time. Some hatred-clouded "avengers" want to redefine all rules on uniqueness or writing skill and say their hate-subject is a plagiarist. No proof. Just a hollered pejorative by someone who can't think straight in his rage.

It's the only way the coslonaut can become "high-tech?"

After all, he is reaching for the threshold of space via surplus helium balloons carrying amateur radio. [pioneering work, important "science"]

>
>Try the null hypothesis. Are you saying the silent periods are
>valueless?

Coslonaut has gone way too far into reducto ad absurdum regions.
By introducing variables unrelated to the basic principle of
operation, he can expand his definition into a number of dimensions
greater than the number of particles in the entire universe! :-)

But, the use of "intercarrier lack of pulse time" is false. The "inter"
means 'within.' In on-off keying "CW" there is NO carrier to be
"within." The off time is short, long, or of infinite variation in
duration. It's a use of "high-tech bafflegab" for a low-tech subject.

Morse code is a very primitive form of technology 161 years ago
when it first began (as representation of numbers, just numbers).
A few years after the first Morse-Vail Telegraphy debut in 1844,
the representation of English alphabet and some punctuation was
added to the "code." [there is still a dispute of whether or not
co-inventor Alfred Vail actually came up with the addition of the
alphabet, but that is another subject...such is neither proved nor
disproved] Morse code is still a very primitive form of representation
of the western language alphabet, numbers and punctuation,
regardless of the technology level of the equipment used to
communicate in that mode.

Coslonaut might just think that off times have great value...as in
the old hoary expression "silence is golden." If so, he should gilt
himself and be silent, quit trying to make a primitive method into
high technology.

>
>One wonders how many times you've been divorced; I can't imagine that
>any woman would remain with you for long.

tsk, tsk, tsk...good old PCTA extra Double Standard! :-)

To answer that 14 January message, Jeffie, I was married a long time ago to my first wife but she died. I'm still married to my second wife...my high school sweetheart. Reunited with her after a very long absence and no contact.

What that has to do with hurricane-prone-Hawaii-but-rescued-by-ham-radio-every-time or even anticipated changes in morse requirements boggles the mind. Yours, apparently. :-)

Thanks again for the offer of study of The Calculus. Don't need it since I passed all three courses some time ago (in between wives, hurricanes, and no need for morse code in electronics design engineering work or hobbies). Heck I once used some Calculus in a project report at RCA Corporation...after the fact since the design work didn't require anything fancy like that. Made upper management happy.

Was there anything else? :-)

Did dit.

>must be.

No, it's easy.

"S" is one time unit on, one time unit off, one time unit on, one time unit off, one time unit on. Then at least three time units off.

"O" is three time units on, one time unit off, three time units on, one time unit off, three time units on. Then at least three time units off.

The only true ambiguity is between "E" and "T" sent all by themselves. Unless you know the speed from some other source, there's no way to tell them apart.

>Something easy for the brain but hard for
>computers to do when the sender varies his speed.

Naw, just requires a bit more software.

Apparently, laws were made to be broken.

In addition to sailors, you can count on at least one Ohio Supreme
Court Justice doing just that.

Yup. How about this one: If a number decreases 2% every 5 years, it will be
down to just about half the original number in 170 years.

It's never been a secret that the agency did its work for many years
and up to today on a budget that was less than the paper towel and
toilet paper expenses of DoD. We bitched about that all the time.

Yet, both the FBI and the Secret Service came to us to teach them
how to use simple DF equipment because they were embarrased calling
us out all the time to find radio signals for them, and in that same
time frame, in competition with the military using feeds from the
same Wullenweber antennas as they were using, and string-and-weight
vectors over paper maps, our monitoring folks got fixes which were
several times tighter than the military folks using the whiz-bang
computer systems did.....

Sorry you missed all the fun.... <ggg>

Not only might, but DO.

I think some of the confusion is in the attempts to decode Morse with
computers.

I wonder if the computer programs use the method that Jim states? It
soulw seem that in order to be accurate, there would need to be many
more subdivisions, with the number of on or off states being multiplied
for each component. This might help with the jitter of sending

But only lids would do that.....

There's a LESSON here you hams and radio freaks.
What happened to this baseball collector can happen to a
radio collector also....and I know SEVERAL xyl's who'd
just LOVE an opportunity to trash or sell off all of her
hubby's "ham radio junk" just to have him pay her more attention..... ;)

---- cut ---

Ex-Wife Auctions Man's $200,000 Baseball Collection
From the News Section of: http://www.voyeurweb.com/main/Main.html

TUSCON, Arizona -- A woman whose husband spent $200,000
on baseball memorabilia took revenge - by divorcing him and selling
it on eBay.

The husband, 42, told his wife, 45, they couldn't
afford kids or a house, and even took money from
her bank account to add (baseball items) to his collection.

The divorce judge ruled she can have the rare baseball
cards and caps, and she is auctioning them online,
according to news media reports.

The couple had been married for 17 years.
When asked about the auction, the wife
said: "I'm giggling."

-- Holy Strike Out, Voyeurwebbers! It sounds like this guy got
caught looking at an inside fastball and never even swung at
it, hehehe! Meanwhile, his wife managed to knock one out
of the ball park. It wasn't just a grand slam, either, it was a
200-grand slam, hehehe! There's also an important lesson
in this story, Voyeurwebbers: ***If you're hobby becomes
your life ... it's definitely time to get a new hobby***. -- Igor

Poor Stebie da Avenging Angle sees only the WRONG in his
opponents. Tsk.

>> So....What does YOUR lack of publishing credits have to do with
>> Lennie's irresponsible and unprofessional behaviour.
>
>Everything. Had I been published in a professional journal, can you be
>sure that he would have stolen my work?

Brian, you have to realize that any printed article to Stebie is new
to him, therefore everything he reads is a "first principles" topic.
He imagines all those articles are stand-alone and cannot ever be
commented upon...therefore the slightest act of just mentioning
them are what he considers plagiarism. :-)

Coupled with his mindset of "all opponents do wrong in anything,"
he is constantly in outrage that opponents exist.

==========

In printed publications sold all over the USA and worldwide, many
are involved in viewing and checking any submitted work. Every
publisher is subject to copyright laws and prosecution thereof if
court action is taken. Publishers don't want that. Authors don't
want that.

Stebie wants to feed on his perceived "wrongness" of fair-use
mentions or references of other works. That's just ignorance on
his part (or his sense of right/wrong is so warped by hatred of
opponents that he cannot tell which is which)...since fair-use
mentions and references have long been a part of published papers
and articles. [at least over the last century] As to what constitutes
fair-use, that is covered in Copyright Law under Title 17, United
States Code. So is references and mentions of other published
works.

For periodicals, the common convention is for publishers to request "first rights" as part of compensation of authors. That means the publishers have "first dibs" on publishing that work and can reprint that work as many times as they wish. Authors can publish or get published that same work once the publisher-puchaser has printed it the first time. There are many variations on the author compensation and some may include sole proprietorship of an author's work. [pecuniary compensation falls under "work for hire" rules by the IRS and is therefore taxable income...mentioned as a sidelight] Some authors can cut a deal with publishers so that authors have free rein on republishing, but that is rare.

What most readers overlook is that a published work can be changed in many ways. Schematics can be redrawn, diagrams can be done differently, different accompanying photographs used, and text rewritten. That changes the nature of the "work." Determination of whether such work is a "copy" of the original published (and copyrighted) is a very long, studious, and arduous proceeding (not to mention expensive) which is hardly ever done. It isn't worthwhile unless it involves millions of dollars.

The ARRL gets away with a benign sort of plagiarism (but isn't such, per se) by getting ALL rights to publishing (usually) for article in their periodicals. They do reprint periodical articles in changed form in the Handbook and other book-form publications...and the original author gets NO money under that compensation form...and usually is uncredited for the work in the ARRL's republishing. That's not a "slam" at the League but is standard practice by them and has been so for years. It's business...and worthwhile to them...but seldom so to the authors.

Do you think Hartley, Pierce, or Colpitts (or their estates) get anything for all the repeated articles on the whichness of the what in oscillators? Nothing. Nada. Zip. Yet the articles pop up now and then and are found in all kinds of electronics texts. Anyone can mention those names, draw schematics for them, make them, measure them and it is NOT "plagiarism" to do so...unless such work is a direct copy of a previously-published article on same.

In tutorial articles, basic circuits can be explained in a number of ways. Tutorials are far from "first principles" kind of subject and are done for the benefit of readers who wish to further their knowledge of a particular subject. Tutorial articles aren't plagiarism of any sort unless they are an obvious copy of something already published. Each presentation in a tutorial, the explanations, are unique. The uniqueness can be copyrighted.

That's the way part of publishing works and it's been that way for some time. Some hatred-clouded "avengers" want to redefine all rules on uniqueness or writing skill and say their hate-subject is a plagiarist. No proof. Just a hollered pejorative by someone who can't think straight in his rage.

Let's get something straight, Lennie.

We're NOT "opponents". That would suggest that we were mutual combatants, equal to the task of said combat.

You are not remotely qualified to engage me on ANY aspect of any subject except electronics theory, and I've already "given" you that. But that's where your knowledge and "experience" stop. You've been disproven on every other rant you've cared to partake in. You look foolish.

Perhaps YOU fancy yourself an "opponent", but that is all you will ever do.

You're a liar. You're deceitful. You're a loser.

Sucks to be you.

Putz.

Yeah, I'm single and that's one of the many reasons why. Marriage is for suckers IMHO. It used to mean somethng many, many years ago but womens mind set have changed to much it isn't worth it now. I've seen FAR too many marriages go down the toilet for my money.

A guy walks into a bar, sits down. Tells the batrender "A round of
drinks on me!"

After getting hs drink, the fellow next to him asks "What's the
occasion Pal?"

"I'm getting married tomorrow! Now I'll be able to get laid any time I
want!!"

The other fellow says "Funny, but that was the reason I got divorced!"

>>>*Every Day*! If I'm not operating, I'm reading or surfing the web to
>>>learn about it. And I venture in here for a little mud wrestling from
>>>time to time too! 8^)

>> What *really* ticks him, I suppose, is people having fun with ham radio and
>> Morse Code...

>Such an odd thing to be so concerned about.......

But that pretty much sums up Len's interest! He's one of those people who
simply can't stand to see others have a good time in Ways Not Authorized By
Len.

>>>>>>>so I'll try to meet him
>>>>>>>halfway with a Morse code topic.

>>>>>>His definition of meeting halfway is that you agree with him 100%.

>>>>>That is certainly possible...

>>>>It's self-evident...

>>>>>>>So maybe we can ressurect this old one...

>>>>>>>I hear lots of Hams declare that Morse code is a binary mode.
>>>>>>>It is most certainly not.

>>>>>>Depends how you define "binary".

Which you haven't done yet.

>>>>>One state equals "0" or "off".
>>>>>The other state equals "1" or "on".

>>>>You have to define "state". If "key up" and "key down" are the states,
>>>>it's binary. Time isn't the factor you make it - look at how Baudot works.

>>>Certainly. But Morse code, which was invented as a human translated
>>>code, does not qualify to me as a 1 or 0 state.

>>>Here is my rationale:

>>>If the key is up, the radio is certainly not sending 0's.

>> Doesn't have to.

Actually it is. "Off" is a string of zeroes.

>>>This brings up an interesting paradox...
>>>If the lack of a signal is a 0 state, then when no signal is being
>>>transmitted, you are receiving zeros until someone sends something.

Why is that a paradox? Morse Code defines a string of more than 8 zeroes as "no
signal".

>> That's right. And a string of zeroes is interpreted as lots of spaces.

>And it means that information is being sent with no energy used in the
>sending. Hence the paradox.

Not at all. The information sent by a long string of zeroes is not unique. It
could mean that no signal is being transmitted. It could also mean that the
transmission media isn't working.

>Of course if we are dealing in quantum
>matters, there is not as much paradox, except for why it is all 0's
>instead of a 1 here and there.

Has to do with noise.

You can send information with practically zero bandwidth, too. Just send a
carrier of known frequency.

>>>I grant that a dit might be a 1.

>>>If a dah is 3 1's, why do we not send 3 dits. I either hold the key down
>>>longer or press the dah switch on my keyer. It sends out a longer pulse,
>>>not 3 1's.

>> It sends three dits with no space between them.

>Only after you decide that the signal is digital for the sake of
>calling it a binary or digital signal. It isn't sent that way, and when
>you listen, you don't think of it that way.

I don't - but some people do. Have you never seen someone copy slow Morse by
writing down dots and dashes?

>The only time you need to think of it that way is when you decide to do
>something with a computer, and need to translate the Morse code signal

>>>>>>Of course *really* skilled Morse ops hear entire words as units of
>>>>>>sound. And at some level, they begin to think in Morse, just as fluent
>>>>>>speakers of a language think in that language.
>>>>>>Of course Len wouldn't know about that...

The difference is this: You've been ambiguous with definitions, particularly
the definition of "binary".

The transmission media for Morse Code are binary, meaning only two states are
used. On/off, 1/0, key up/key down, mark/space, whatever, still only two
states.

But the encoding/decoding process, be it in hardware, software or wetware, is
more than binary because it encompasses more than two states. The same is true
of, say, Baudot or ASCII RTTY, PSK31, etc. In fact PSK31 has many Morse-like
characteristics, such as variable-length characters.

>>>>The big question is: what does it matter if Morse is binary or not?

>>>Of course not! I thought it might be something better to talk about
>>>than whether Len thinks we're "jackboot thugs" tho'! 8^)

>> Who cares what Len thinks? I sure don't.
>
>I'm not terribly concerned much about his opinions either, although I

>have some fun with him from time to time. As do you! 8^)

I just correct some of his mistakes, and offer proof that he should not be taken seriously. Which seems to enrage him, but that's not my problem.

>> His behavior here has caused most of
>> us to lose whatever respect we might have once had for him. His latest
>> reply to K8MN simply reinforces that once again.
>
>But my main purpose is to get a little traffic on the list that isn't
>the bottom feeders type stuff. I enjoy the occasional good row that

Nope.

But one sure is necessary to be an active Amateur Radio operator,
hence being able to acquire PRACTICAL EXPERIENCE in BEING an Amateur.

You've aggressively avoided getting a license, yet your lack of
experience routinely leaves you with your wrinkled buns in the air for
all to see.

> > What's with you, Your Scumminess? Didn't they teach you radio
> >rules at professional radio school?
>
> What "professional radio school?"

That's my point, Lennie. You don't have the training.

> Tsk, tsk, not all amateur bands are allocated now or in the past
> to be exclusively for amateurs.

That's not the issue now, is it, Lennie?

The issue is your lack of qualifcations to wield an informed
opinion on Amatuer Radio matters.

> > Your age might get you off of jail time, but your income,
alleged

We weren't talking about "only" the newsgroup.

Maybe your pretend shrink wife is impressed with your shuffling,
but we know better.

> I'm not impressed.

And you're not very impressive, either.

Big talk. No facts. Frequent errors.

> > Those rules apply even to the UNlicensed (alleged)
professionals
> >such as yourself.
>
> Tsk, I have no allegiances with the UN. And, I am licensed as
> well as a professional in electronics-radio. TS, boobie.

You are not a licensed Amateur. That is a fact.

And I doubt you have ANY "allegiances" to anyone but you, Lennie.

And that incudes the Veterans that you shamefully humiliate with
your pitiful personal use of thier sacrifices for YOUR glorification.

> >> ...only from all the PCTA extras shooting themselves in the
foot

> Calculus in a project report at RCA Corporation...

And I am sure they were using some Gold Bond Powder after you had
your hands on it....

> after the
> fact since the design work didn't require anything fancy like
> that. Made upper management happy.

You mean it made them happy that you took the long way around to
"prove" something that a lot less work could accomplish...?!?!

Lennie...WHY do you insist on making such stupid comments when all
you're doing is showing what an idiot you are?

No one cares that you threw some calculus formulas into a project
taht even YOU admit wasn't necessary for...

That's grandstanding, and YOU routinely accuse Amateurs of doing
the same thing!

I am sure the "upper management" guys were just tickled to death
to see you padded a report with lots of useless "work".

> Was there anything else?

Yeah.

Get your head out of your butt.

Your wife doesn't know which end to kiss goodnight or to put a
diaper on.

But considering it's YOU we are talking about, I guess it doesn't
matter...Same/same.

> Did dit.

Did nothing.

> LenAnderson@ieee.org
> LenAnderson@ieee.org

Impressed with yourself again, I see...

Problem is you were twice as stupid...

Again!

Putz.

My wife never had to work for my hobby. Before we married we
discussed it. I had been a ham for years before we met. I told her
that I was an Amateur Radio Operator for years before we met and I
would be one long after she's gone. If she couldn't accept that, she
would have to move on. Likewise, I never tried to discourage or
change things about my wife. Those things a person likes and
dislikes, or their hobbies, etc, are part of what makes them the

persons they are. I believe that if we take those things from a person, there will be a hole in their life and they will no longer be the person we met and fell in love with. Of course, it is different if that person changes hobbies, etc. on their own, but it is not good to take it from them.

To include in their budget, support for each other's hobbies is not a bad thing, but to break their budget over any one hobby is not a good thing. My wife never went hungry because I bought a radio.

1242. Good News! -- Jesus Christ Went To The Cross So You Can Go To Heaven

Newsgroup: rec.radio.amateur.policy
Date: 2005-02-06 19:37:42 UTC
From: Good_News_For_You_All@yahoo.com
Message-ID: <1107718662.895554.108060@c13g2000cwb.googlegroups.com>
Source record: 102758

Good News!

Do you know how simple it is to go to Heaven after this life has ended?

The good news is that God came from Heaven to earth in the person of Jesus Christ over 2000 years ago and died for our past, present and future sins(misdeeds). He was born in the land of Israel supernaturally to a virgin Jewish woman named Mary. He lived a sinless life for thirty-three years and then sacrificed His sinless blood and died on a cross to pay the death penalty for our sins.

After Jesus died He rose from the dead three days later as He said He would. The Holy Bible also tells us that Jesus Christ ascended into Heaven and that all who accept Him as their Lord and Saviour will live forever with Him in Heaven where there is no more death, sorrow, sickness and pain.

The Holy Bible very clearly explains how simple it is to be saved and on your way to Heaven, "For if you confess with your mouth, "Jesus is Lord," and believe in your heart that God raised him from the dead, you WILL BE SAVED." (Romans 10:9)

You can be saved right now and on your way to Heaven if you will open your heart to Jesus and pray the following prayer:

Dear Jesus Christ, I want to be saved so that I can have a home in Heaven when I die. I agree with You that I am a sinner. I believe You love me and want to save me. I believe that You bled and died on the cross to pay the penalty for my sins. I believe that You rose from the dead. Please forgive my sins and come into my heart and be my Lord and Saviour. Thank You Lord Jesus Christ for forgiving me and saving me through Your merciful grace. Amen.

You are now a Christian if you said the prayer and allowed God to save you. Welcome to the family of God.

Have a great day!

It's just awful, isn't it?

Ask anyone not already on social security where will it be when they want to retire, and they'll tell you there won't be any left. Common knowledge.

But some measly president comes along and wants to actually do something about it and all we hear is how you can't touch social security. Don't fix sumptin dat ain't broke.

Hi, hi!

Instead of Morse Myths, we should start SS Myths. Where's Aaaron Jones when you need him?

<more snippage>
<and a quick rearrangement>

>> The difference is this: You've been ambiguous with definitions, particularly
>> the definition of "binary".

<partial post from webopedia>

http://www.webopedia.com/TERM/B/binary.html

Pertaining to a number system that has just two unique digits. For most purposes, we use the decimal number system, which has ten unique digits, 0 through 9. All other numbers are then formed by combining these ten digits. Computers are based on the binary numbering system, which consists of just two unique numbers, 0 and 1. All operations that are possible in the decimal system (addition, subtraction, multiplication, division) are equally possible in the binary system.

The FreeDictionary has 4 different parts to the definition
http://www.thefreedictionary.com/binary

1. Characterized by or consisting of two parts or components; twofold.
2. Of or relating to a system of numeration having 2 as its base.
3. Chemistry Consisting of or containing only molecules consisting of two kinds of atoms.
4. Of or employing two comparatively nontoxic chemicals that combine to produce a deadly poison: binary weapons; a binary nerve gas.
5. Music Having two sections or subjects.

The Sharpened glossary defines binary as:
http://www.sharpened.net/glossary/definition.php?binary

Binary is a two-digit (Base-2) numerical system, which computers use to store data and compute functions. The reason computers use the binary

system is because digital switches inside the computer can only be set to either on or off, which are represented by a 1 or 0. Though the binary system consists of only ones and zeros, the two digits can be used to represent any number.

So let us get to where I get my definition of binary.

What I call binary is a base 2 numerical system. Morse code is not a base 2 numerical system.

Apparently every one else here defines binary as the "consisting of two parts".

Okay, so let us use *that* definition.

As far as I am concerned, it is contradictory to define Morse as "consisting of two parts, and then shift to a different definition. (base 2)

There is not any ambiguity in that if you are going to use it in a computer, at some point it must be converted to base 2.

Do you follow me?

I don't see any point in saying it is binary because it is in two parts, because despite it being "on" or "off", there is more then just the carrier being on or off, isn't there?

So if everyone wants to say that Morse code is binary, using the two state on and off definition, (despite there being much more than just an on and off state) and *then* suddenly shift to the base 2 definition in order to shoehorn it into a weird 2 definition-definition, well that seems a lot more ambiguous than anything I've written so far.

>know from looking at other characters what the speed
>must be. Something easy for the brain but hard for
>computers to do when the sender varies his speed.

It is not "hard" for a semi-modern computer to do. All it means
is that the programmer has to write more source code to perform
a task called "rate adaption."

Lay folk take the very easy approach to visualizing what the
computer does (via its programming) as simple decoding of
groups of binary state combinations. That's common
observation. What isn't so obvious is that, with a clock rate
of 20 MHz or better, the computer [program] can test a time
sequence for relative occurances of On versus Off by periodic
sampling.

Segregation of a single O from a single S in morse code can
be done by comparing the time length of the On. That is
different in morse code for an approximately equal character
bit group time. [dashes are supposed to be longer in duration
than dots] At a dot rate of 1 KHz (faster than 100 WPM
equivalent), the repetitive period is 1000 microseconds. The
computer hardware (under program control) can sample that at
a, say, 10 microsecond period. That allows 100 samples of
each dot or dash which can be stored in temporary computer
memory. [that's more memory than is actually needed but this
is just an example] Already knowing the sample rate (from
the hardware and the time of execution of the iterative routine),
another routine can test each sample in turn and accumulate
the relative length of each On versus a character group's total
time length. That would differentiate dashes from dots.

The difficulty for the programmer is setting up a set of rules to
determine the relative lengths. Such does NOT have to be
precisely 3:1 in ratio of dashes to dots. It can be as coarse as
2:1, which would be called "sloppy" manual sending. :-)

Once there has been a differentiation of dashes versus dots, a
variation of the rate-adaptive routine can be used to differentiate

the longer time between character spaces. Again, the routine's testing can use a wide range of time intervals. When spaces between characters are determined, the much-simpler task of decoding character combinations into ASCII (or equivalent) character combinations can be done (probably by a look-up table stored in memory). With that completed, the computer-handleable characters can be displayed on a screen or sent to a paper print device.

I've not done the above but am describing what a programmer acquaintence had already done some years ago using a desktop computer having a 20 MHz clock rate CPU and very moderate RAM for temporary program memory. My (then-new) Icom R-70 was lent to him for some on-air real-time testing on amateur as well as commercial morse code signals (there were very few non-amateur morse signals heard then). With a simple audio-to-digital interface (peak detector with quick fall time), it would "read" every morse signal with a 2:1 dash-dot ratio or better, even in moderate noise. The first few characters of a string of characters might be lost until the rate-adaptive routine adjusted itself, but otherwise was quite acceptible.

You might ask "why" do that at all? Answer: It was someone else's personal intellectual exercise to accomplish a seemingly difficult task. Just a fun task for him and of some interest to others who liked to program. It was a hobby project and it proved what was set out to prove to the programmer.

That morse decoder wasn't carried to any perfection. It could have been developed further to be quicker in rate-adaption, to add more noise-elimination and so forth. There was NO DEMAND for that commercially, nor was it done for prospective program sales in the future. [hardware already existed to do all the rate-adpation and decoding of repetitive teleprinter codings in a single IC a decade or so ago] Program notes and source code printouts filled a large loose-leaf notebook and were freely shown. Of particular note was the flow-diagrams of the various iterative subroutines, much more readable to me than the C source code (maybe it was Pascal?) of the executive program. The same executable program would work fine with modern desktops or portables having 2 GHz clock rates and 100 MHz rate memory fetch cycles...even to using already-established routines to determine real-time hardware execution times necessary to determine word-per-minute equivalent rates.

[portions of this example description were already in this newsgroup a few years ago, principally in reply to Ed Hare and some others]

It is less a matter of "adapting morse code to computers" than it is making the computer adapt to decoding morse. A big question is WHY BOTHER?

Morsemen, hoping to show they are "superior" to mere machines
as well as modern technology, will insist and insist that their human
abilities (honed to a fine edge) are oh-so-much-better than any (hack,
ptui) computer thingy. They can evidently work miracles using
morse code mode communications, far beyond the best that can be
done by all other radio services and commercial communications.
:-)

>> >rules at professional radio school?
>>
>> What "professional radio school?"
>
> That's my point, Lennie. You don't have the training.

Tsk, tsk. Such an ignorant addition to having stated that the
University of Illinois is just a "correspondence school." :-)

Well, let's see... none of the classes I took at UCLA, CSUN,
Loyola, or even L.A.Trade-Tech were called "professional radio
school." A BSEE does not stand for "professional radio school."
Practical, on-the-job training with the U.S. Army Signal Corps,
Hughes Aircraft Company, Ramo-Wooldridge Corporation, RCA
Corporation and Teledyne (Electronics Division) did not involve
"professional radio school." [just some examples, not all]

The DCAS (Defense Contract Administrative Services) listings
didn't have me with any "professional radio school." Neither did
the FBI, CIA, DIA, FCC, FAA, IRS or Franchise Tax Board of
California...all of whom were informed of my schooling and
professional job experience. [I'm not sure if the DoE did any
investigating directly for my clearances there (Atomics
International) since they had enough to go on from other
agencies' information]

Nope, never filled out one of those "school" applications as given
on back pages of Popular Mechanics or the Police Gazette.
That means I must be some kind of "wash out" in schooling? :-)

Ah, yes, I have "no experience in radio!" Poor Stebie, going into
a fit of rage because I didn't spend 8 hours per for years doing
ham radio activity like he did in the murine copse or in the hospital.
[the ONLY radio is amateur radio? :-)]

Maybe I'll write MIT or Harvard and see if I can sign up for one of
their "correspondence courses" in "professional radio school?"
On completion they will award me a pretty certificate suitable for
framing?

There ya go! :-)

Then he's heading down a dead end street. Hopefully he finds something
else, like amateur near space exploration.

> After all, he is reaching for the threshold of space via surplus
helium
> balloons carrying amateur radio. [pioneering work, important
> "science"]

Bingo! This is the very same tack that all of the research
universities use to get grant money. They propose to re-study
something that has been studied previously. They get the grant money,
hire a handful of chinese and indian post-grads. They redo the study,
find exactly the same results, then always state that more research is
necessary.

And the government falls for it.

> >Try the null hypothesis. Are you saying the silent periods are

subject.

But, but, but....

Len, they're master of it. In one breath, Miccolis says that Morse
Code is ones and zeroes, marks and spaces, then in the next breath,
he's back to the correct definition. A master of deception.

> Morse code is a very primitive form of technology 161 years ago

Some of these guys were there. They might know Vails actual role...

> Coslonaut might just think that off times have great value...as in
> the old hoary expression "silence is golden." If so, he should
gilt
> himself and be silent, quit trying to make a primitive method into
> high technology.

Now, now, now, Len. The off times must be important. It's the only
way the ARRL can explain away how they can send a supposedly "Morse
Code Exam" at 13-15 WPM and still claim it meets the FCC's 5WPM rate.

And if these guys silenced themselves, then where will we ever get gems
like, "...A morse code exam would be a deterrent to morse code use.

SS is not a retirement plan. It is a mistake to count any money from it a a given.

But I do have a few questions about privatized SS.

What happens if the Stock market tanks the month before your retirement? Unless there are strong protections, (which will end up a huge drain on the 'Guvmint) there may be people who suddenly find themselves poor.

What are the politicians going to raid for extra money?

TITLE: "Jesus Jr. - The Country Western Christ"
ARTIST: The Cab City Combo

(What can be said about a bunch of old puds that
continue to mock classic rock and roll and anything
else that occurs to them? Are they WHAT AMERICA
NEEDS NOW? Are they THE NEXT BIG THING?
Or are they fooling themselves and just wasting everybody's
time. You decide!)

Free MP3 download of this song IS HERE!
--> http://music.download.com/cabcitycombo/3600-9022_32-100151557.html

Lyrics

Jesus Jr! His grandpa is the Lord
Jesus Jr! He drives a big white ford
Jesus Jr! He takes his dad's advice
Jesus Jr! The Country Western Christ

Well he was born in Tennessee
Not somewhere out in Galilee
His dad got his at Calvary
And his mom works at the grocery

Jesus Jr! His grandpa is the Lord
Jesus Jr! He drives a big white ford
Jesus Jr! His grandma Mary's joy
Father, Son and the Holy good old boy

Well Junior takes his name in vain
When folks abuse the passing lane
And at his favorite bar on Main
The only thing he'll raise is cain

Jesus Jr! His grandpa is the Lord
Jesus Jr! He drives a big white ford
Jesus Jr! At least he's not a jew
10-4 Satan, his rig is passin you

Now if his wheels get stuck in mud
He'll part that shoulder like the flood
And when he drives on Easter, bud
His left-hand signal's dripping blood...

Jesus Jr! His grandpa is the Lord
Jesus Jr! got mudguards on his big white ford
Jesus Jr! He takes his dad's advice
Jesus Jr! The Country Western Christ
Jesus Jr! The Country Western Christ

1255. Re: Lardass' Suicide attempts from before has left him more brain damaged!

In article <cu1odv$8c9$0@pita.alt.net>
"Lardassed 31 year old VIRGIN Lloyd" <Nospam@nospam> whined:
>
>
> Roger Wiseman said (bwhahaha..Lardass sees his owner everywhere!)

You see Roger everywhere, don't you, his little fat bitch?
Oh, and my little high school dropout and had to get a G.E.D., you
should focus on your own spelling:

breaddead" - LLoyd hasn't got anything upstairs in the oven

"defenseive" - Lardass is "defensive" of his ignorance

"counter-offenseive" - When LARDASS LLoyds attack

"nights" - Athens ASSHOLE was referring to last "night's" masturbation
session

"I forget to set the playlist in Winamp to repeat!" - Mongolloyd also
"forgets" the use of past tense, maybe he forgot!

"Techincal" - Lloyd just hates those "technical" things

"Dalkes" - Lloyd's granddad remembers when movies became "talkies" too
bad LARDASS learned to Dalk <sic>

"That it!" - When Mongolloyds get real mad, they talk like Tor Johnson

"Woger" - LARDASS closely identifies with Elmer Fudd with his lack of
hair and all

"decide on weather or not" - It's always "stormy weather" with Lloyd
deciding "whether" or not to use correct English

"can not" - Mongolloyd is wondering how he "cannot" seem to get ahead
in life

"is'nt" - "Isn't" LARDASS cute when he is mad?

"PAINFULL" - How LARDASS' bathroom scale feels when he steps on it in
the morning, real "painful"

"I wish for Roger Wisemand" - Lloyd liked thosed thingd ford Rogerd

"alot" - Davies dreams he can communicate in English a lot

"thier" - Lavender Lloyd sure does lisp after a night behind the
dumpster

"dont" - Lloyd says "dont", the rest of the world says "don't"

"Isreal" - Is FATASS Lloyd's retardation for real, or can he blame Israel?

"juist jelous" "extermenate" - A three for one post Athens Asshole axiom

"footting" - What LARDASS doesn't have, an equal "footing" anywhere

"Cant" - Emmanuel?

"th" - When Lloyd gets nervous, he stutte, er stutters

"enfighting" - Lloyd's two brain cells are infighting for control of his stupidity

"YOU STUPID JEW!" - Wasn't Jesus Jewish, so called Christian LLoyd?

"Tonite" - There's nothing in Lloyd's brain "tonight" or any night

"segmant" - What Lloyd's communications are, only sentence "segments"

"I just listening" - Too bad he doesn't listen to his poor English

"buffon" - The Athens, Alabama "buffoon" strikes again!

"museium" - Where LARDASS LLoyd keeps his "muse"

"nastey" - How everybody describes LARDASS' body stench, especially in the ghetto

"loose" - Lloyd's description of his spinchter muscles...

"wont" - Lloyd refuses to learn English, it's Lloyd's "wont"

"awhile" - It will be "a while" before Davies gets a clue

"freinds" - Lloyd's conglomeration of "friends" and "fiends"

"thier" - "There" just isn't any hope for LARDASS Lloyd "ill-educated" Davies

"backstabers" - Lloyd's version of the OJays' hit

"becuase" - Home of the "Deliverance Extras" spelling by LARDASS Lloyd

"obselete" - What LARDASS thinking is to him, others see it as 'obsolete'.....

"belive" - What fools like LARDASS Lloyd "believes"

"thier" - Ill-educated Xtian LARDASS Lloyd shows off his language skills!

"marshalls" - Mongolloyd spell "marshals" real good!

Wisemand - LARDASSd fucksd upd againd

"compay" - Mongolloyd never gets any female "compay," while others do get "company"

" But when we are winning," DUMBFUCK, YOU have NEVER WON anything in your miserable life!

"and do the nasty!" You don't really know what that means, do you, 30 year old VIRGIN?

"It's does" - Mongolloyd use good English

"momnet" - LARDASS Lloyd Davies misses his dead "momnet" for a "moment"

"seriuosly" - Lavender Lad President Mongolloyd wants to be taken "seriously" instead of "seriuosly"

"annouced" - Mongolloyd "announces" his stupidity again

"tonite" - Davies never lets his lack of education stop him from announcing to the world he's a fucking imbecile!

"nite" - When LARDASS Lloyd molests those kids he makes them say "nite, nite" at "night"

"weldare" - Calling Dr. Weldare, LARDASS needs his head out of his FATASS....put it on his welfare bill

"so fuck of" - When Mongolloyds who have man tits talk tough......

"fukcing funney" - Alabama deliverance extra Davies speak

"pictrue" - "Picture" yourself as a Davies Mongolloyd

"isseus" - Davies has "issues" too many to list here

"resortjng" - Is Lloyd from Finland?

"attsxks" - When LARDASS Davies "attacks" he uses illiteracy

"basturds"- What mental illness patient LARDASS Lloyd calls his nurses

"shkt" - Mongolloyd Davies' "Skittles", he likes that "Hershey rainbow"

"law suit" - LARDASS never leaves his HUD apartment with out his law suit

"opinionn" - When LARDASSn postsn whiln drunkn

"intrenet harrasssmint" - Tries to make LARDASS Lloyd's rotting teeth feel fresh

"sneeky" - The teachers always "sneaked" Lloyd through the next grade

"that' wasnet" - LLoyd was out that year of school that they went over English grammar

idiout! - "Lloyid" <sic> strikes out again!

"speling" - Mongolloyd Davies the "spelling" bee champ of the retards!

"reas isseus instaed" - Davies talking out of that cheap beer again

"atttacking" - LARDASS Lloyd stutters when he gets upset.....ttttt.....

"challegne" - When Mongolloyds drink and post

"metnal" - Mongolloyd just doesn't have the "mental" ability to debate......

"debste" - What Lloyd's mommy did to him in the bathtub

"cahllenge" - Mongolloyd speak for "call" and "challenge"

"basturds" - LLoyd ,Amanda's illegitimate "bastard" sure does have a scat fetish

"morsd" - Whend Daviesd drinkd andd postd

"wont" - It is Mongolloyd's "wont" to be stupid, "won't " you let him?

"youd" - Oops, LARDASS did it again!

"poinion" - Must be an Athens Alabama "Deliverance" thing

"Woger Wiseman"- LARDASS Lloyd's got that cocksucker's lisp

"isnt" - "Isn't" LARDASS cute when he slobbers?

"worfh" - Davies' cocksucking lisp has returned

"waset of spaceda" - When Lloyd's only friend Colt 45 malt liquor kicks in

"Oppulant" - The only thing "opulent" in LARDASS is that he is rich in ignorance

"obly" - LARDASS lisp from cocksucking shows when he tries to say his favorite fag artist "Moby"

"wood" - LARDASS LLOYD'S head "would" be made of "wood"

"dserve" - LARDASS lives in that ghetto where they say he sure does "dserve" those pizzas

"frum" - LARDASS LLOYD DAVIES wonders where his real father is "from"

"DISCUST" - Mongolloyd Davies' command of the English language is "disgusting"

"You worthless coward are scared of debating me." - Mongolloyd make good sentence

"jellous" - Most of LARDASS Lloyd's cellulite body is "jealous" of skinny, in shape people

"It just didn't wok out"
"wok out" - When LARDASS tried to stir fry those nutsacks for pizza topping, Pappa John's terminated him saying he didn't "work out".

"entact" - LARDASS' single brain cell isn't "intact" either.

"empahis" - Notice how LARDASS Lloyd's "emphasis" is always on his fucking stupidity.

"Fuck all fo you" - Christian LARDASS Lloyd showing that Jesus spirit.....

"bllod" - How LARDASS Lloyd spells "blood"

"did'nt" - LARDASS "didn't" do very well in school

"PLEASE by a clue" - LARDASS Lloyd's parents couldn't even "buy" him an education

"extrodinare!" - LARDASS is a moron "Extraordinaire"

"unsubsribe" - Mongolloyd Davies "subscribes" to the theory that ignorance is bliss...he must be in heaven

"Must've struck a cord" - LARDASS confuses his favorite sex fetish of tying his penis with a
light cord and masturbating to the word "chord".

"dumass" - Dumbass Davies trips and falls in shit again.

"Them two bigtime losers!" - Mongolloyd mentally ill Davies makes good sentence!

"straming" - Lardass usually has to wash his sheets from the "stream" of piss
when he wets the bed or not given his filthy HUD apartment

"surpassinf" - LARDASS is always "surpassing" his previous levels of stupidity.

"pleanty" - <guffaw!> "Plenty" of stupidity coming from LARDASS Lloyd.

"Cause i'll have law lock you up and throw away the key!" - Mongolloyd talk tough!

"pome" - When LARDASS WADSWORTHLESS Stubbyfellow writes a "poem"

"Once she here's my show" - Most people hears a show, LARDASS "here's" them!

"forgotton" - LARDASS has "forgotten" what he was taught in special Ed

"I want your seriousness" - LARDASS does his take on "I want your sex"

"I did'nt ask for your fucking grammer checking!" - LARDASS Lloyd revels in his ignorance!

"agrument" - When the voices in LARDASS Lloyd's mentally ill head collide they have an
"argument"

"craetive" - Mongolloyd Davies isn't very "creative" with his
stupidity, however.

"You could have posted it, for we know!" - LARDASS make good sentence!

"bottem" - Mongolloyd likes those little boys' "bottoms" from hanging
with Steve Holsten

"James Wickstrom talked about tonite that out threre, thier Sherriff's
department" - Mongolloyd
shows off those Pulitzer prize writing skills.

"bring yer cents" - Mongolloyd show how he flunked out of school
because he had no "sense"

"You peeks out" - LARDASS Lloyd and stupidity a symbiotic relationship.

"Be thier" - LARDASS Lloyd make good sentence!

"If you pussys have balls you confront me!!! Deep down you are scared
of me. You our jellous
because I am the great almighty Time Lord!!!!
The Time Lord always wins in the end." - Does it really need to be said
about Mongolloyd Davies?

"yerself", "hisself" - LARDASS picked up his language skills or lack
thereof from the
niggers his mommy Amanda serviced.

"I lost TEN POUNDS on my diet simce first of the year!" - Too bad
LARDASS didn't gain any language skills

"The best Amatuer Radio talk show ever!" - Chosen 5 to 1 over literacy
by other ill-educated morons and Mongolloyd

"All of my Daleks have been dispached!" - Too bad some extra brain
neurons haven't, Mongolloyd.

"satillite" - When LARDASS met the space between his ears

"Tuseday" - LARDASS' usual day to wear his pink tutu

"I am 210 punds now!" - LARDASS lies and fucks up again!

"jelous" - LARDASS Lloyd is "jealous" of those who can spell, read, and
write.

"peoples" - LARDASS Lloyd the "people's" choice of the Biggest
L-O-S-E-R!

"curtians" - LARDASS LLOYD DAVIES uses those "curtains" in his filthy
apartment as a
masturbation rag

"depsised" - Mongolloyd Davies, who the entire real ham community has
"despised" for his lack of ability
to pass a simple 5 wpm code test or General theory

"sicker" - When Lloyd Davies has a mouth full of cum he can't say "sticker"

"liceneses" - Mongolloyd Davies has one of those exclusive "licenses" on stupidity

"isseus" - LARDASS has "issues" with people of intelligence.

"conquor" - Mentally ill LARDASS Lloyd has yet to "conquer" his obesity and mental illness

"crakheads" - Retard Davies make good sentence!

"servent" - Roger Wiseman's willing "servant" makes another gaffe.

"lesibens" - When Benjamins take the wild side...the "lesbians" don't care, though!

"Los Angles" - Mongolloyd has the wrong "angle" about "Los Angeles"

"busses" - Do they take the motored "buses" or do they take the

"thier" - You say "their," Lardass says "thier".... to-may-to, to-mah-to.....

"eductional" - LARDASS Lloyd's writing is "educational" on how severe illiteracy is in his family.

"She sounded like she really whappy to here from me." - Mongolloyd get rejected again!

"This is morning I weigh at 207 pounds. This should prove to you, that I can succeed if I put my
mind to it. I know some your stupid critics can't see that, but I'm not here to please you." -
- LARDASS makes the "huh?" factor rise.

"This looks much more like sexy Lloyd" - Porky Pig lookalike stubby tubby Davies dreams
he looks like a skinny, tall Billy Zane

"I figured you the thought of me owning..." - Lardass dreams the impossible dream of thought

"I took you a long hour and a several minutes..." - Too bad LARDASS Lloyd didn't take and pass English

"I get a laugh over you!" - Mongolloyd make good sentence!

"did'nt" - "Didn't" Lardass ever pass any school subject?

"Proves to show" - Lavender Lloyd proves he is an imbecile

"It' paid off" - Alcoholic LARDASS Lloyd's bar and utility bills never are though.

"I wear if with" - Davies wears his stupidity well

"You need to get al ife and a job." Mongolloyd retardo Davies needs to get English lessons and
not dream of an "Al ife" with "Al Queda"

"I've never fucking pretending attorneys!" - LARDASSclown Davies never had to pretend to be stupid, either!

"...what your life must me like..." - Mongolloyd's life of pizza delivery and trashcan robots is really something
to want, too, isn't it?

"manor" - Lardassclown Davies' "manners" are like those of a hog....

"Christien" - Poor LARDASS Davies, he's shows why ignorance is bliss in the eyes of the Lord.

"reely" - Mongolloyd Davies is "really" stupid, isn't he?

"please don't imposter me more" - Mongolloyd make good sentence!

"distastful" - A description of LARDASSCLOWN DAVIES' eating habits.

"commnet" - Most people make "comments," ill-educated Lloyd Davies makes "commnets".

"None of you refuse to tell me who you are." - Huh, Mongolloyd?

"Millinium" - Even after a "millennium" LARDASS couldn't be smart!

"afriad" - LARDASSclown Davies isn't too smart, I'm "afraid"

"powerfull" - Mongolloyd Davies sure has a "powerful" command of the English language.

"conquor" - Lardass Lloyd has yet to "conquer" his idiocy.

"I always new that your stupidity would trip you up, Mr. Wiseman."
- I just "knew" Llardass Lloyd couldn't pose as "Christy
Davies" without fucking it up and outing himself.

"I have given it some though and decided to come back" - Mongolloyd has never given anything any "thought." (from another "I'm leaving" speech/lie)

"usaul" - As "usual" Lardass lloyd Davies fucks up!

"Secwet Woger " Llardass Llavender Llad Lloyd's been sucking so many cocks he's got a lisp!

"douters" - Even though he has his "doubters", it's
"doubtful" Llardass Lloyd has an I.Q. over 70.

"bypolar" - Mongolloyd Davies is a "bipolar bisexual".

"desperite" - Lardass Lloyd is so "desperate" to win at something, anything.

"situtation" - Most people get in "situations, " but not our total fuck-up Lloyd.

"aholt" - Lardass Lloyd usually gets "a hold" of himself on a Saturday night, since he has no date!

"mysteriuos" - Mongolloyd Davies, "mysterious" survivor of a coat hanger abortion attempt.

"I've did" - Most people say " I did"

"Woger" - When cocksucking, lisping fags try to say " Roger."

"for sometime" - Lardass has been a mentally ill retard "for some time" now.

"mommie's" - When Mongolloyds say "Mommy's" as in "Mommy's house."

"drop out" - Lloyd was a High school and college " dropout."

"backpedalling" - "Backpedaling" is what Lardass does a lot of.

"Maybe two years back" - Mongolloyd speak.

"outted" - Lardass Lloyd's illteracy at work.

"I've riddled Woger for years as Arf! Arf!" - (Mongolloyd is Arf!Arf!)

"self esteme" - One thng is for sure, Lardass has it..."low self esteem," that is.
"short comings" - Lardass has many, many "shortcomings."
"yahoo" - Lardass always goes into the "Yahoo!" gay chat rooms.
"The truth hurts you see" - So does reading your mangling of the English language, Lardass.

"His stupidity can not be disguised for long." - Lardass' stupidity "cannot" be disquised at all.

"entireity" - Lardass is the embodiment of stupidity in its' "entirety."

"bothe" - Lardass is "both" stupid and retarded.

"got hime" - Lardass has got "him" a case of the dumbass!

"evelope" - Mongolloyd pushes the stupidity "envelope" to the max.

"chiicken" - Lardass Lloyd should eat more "chicken" instead of leftover pizzas then he wouldn't be obese.

"dont" - "Don't" ever improve your English skills, Lardass!

"likign" - Huh? More Mongolloyd Ebonics.
"you ignorant spawn of satin" - Lardass ironically confesses his love of wearing lace!

"powerfull" - Mongolloyd's brain cell isn't "powerful" enough to light a christmas light.

"heresay" - Mongolloyd is a fucking idot, and that's no "hearsay."

"glas" - Lardass Lloyd never uses a "glass" to drink his sticky protein.

"freind" - Dicksucking Davies hasn't got a "friend" in the world.
"yu" - Lardass, "you" really should've gotten a better education!
"Got Brother Stair tuned in here to listen to while sleeping tonite!" - Mongolloyd fucks up again!

"I am not a retrard" - Oh, yes, you are, Lardass!
"Got you in another lie!" - We've "caught you" in another fuckup, Dumbass Davies!
"I am not mentally challenged! I have some pontential." - Mongolloyd is in denial about his imbecility and has the "potential" to become an even bigger jackass!

"did'nt" - Mongolloyd "didn't ever pass Spelling.

"soon all your asses are belong to sherrif" - Mongolloyd fantazises about having sex with his local "sheriff"...

"shure" - We are "sure" you are a fucking moron, Llardass Lloyd!!

"proxie servers" "conecting" - Mongolloyd used "proxy servers" when he "connected" to spam Josh's board.

"enfrocement" - Mongolloyd also fucked up when he spoofed caller ID's and spammed boards, and now law "enforcement" is watching him.

"apoligize" - Mongolloyd's parents should "apologize" for ever siring such a mentally ill retard.

"meagre" - Mongolloyd's "meager" brain can't comprehend English.

"goten" - If only Mongolloyd would've "gotten" an education!

"Prepositioned" - Mongolloyd always gets "propositioned" by nouns and pronouns!

"temting" - Mongolloyd is as "tempting" as a root canal.

"accept" - Mongolloyd use the wrong word in the wrong place again!

"normaly" - "Normally" Lardass would be passed out from Two bud lites by now

"red head" - Little Red is shoving his big ole black dickhead in Lardass' fat piehole.

"Aflack" - Mongolloyd fucks up yet again..www.aflac.com
"Dickionary" - Mongolloyd is almost as bad as his queer lover Holsten in obsessing about dicks.

Mongolloyd make good spells!

Must your IRA all be in the market? Retirement investment must include
safer places to park your money.

Look at the Federal retirement system.

Look at your state retirement system.

Look at your teacher's retirement system.

Is is all in the market?

Is it all out of the market?

Or is it a balance of the two?

> What are the politicians going to raid for extra money?

And let's not forget Farnsworth. This will confuse matters a bit. I
have seen CWGet confuse S for O until it "settles in". My guess is that
Farnsworth Morse might be involved.

But it is odd that a binary method requires all that software. ;^)

But I think I have the confusion figured out. What is happening is that
people are starting by defining Morse code as a 2 state on and off
system, and trying to offer proof of that by suddenly changing that to a
base 2 system.

Can anyone offer a proof that does not switch between the two definitions?

I cannot accept Morse as a two part on and off system because there are more than two parts, as is made clear when people try to switch to base 2.

- Mike KB3EIA -

Good News!

Do you know how simple it is to go to Heaven after this life has ended?

The good news is that God came from Heaven to earth in the person of Jesus Christ over 2000 years ago and died for our past, present and future sins(misdeeds). He was born in the land of Israel supernaturally to a virgin Jewish woman named Mary. He lived a sinless life for thirty-three years and then sacrificed His sinless blood and died on a cross to pay the death penalty for our sins.

After Jesus died He rose from the dead three days later as He said He would. The Holy Bible also tells us that Jesus Christ ascended into Heaven and that all who accept Him as their Lord and Saviour will live forever with Him in Heaven where there is no more death, sorrow, sickness and pain.

The Holy Bible very clearly explains how simple it is to be saved and on your way to Heaven, "For if you confess with your mouth, "Jesus is Lord," and believe in your heart that God raised him from the dead, you WILL BE SAVED." (Romans 10:9)

You can be saved right now and on your way to Heaven if you will open your heart to Jesus and pray the following prayer:

Dear Jesus Christ, I want to be saved so that I can have a home in Heaven when I die. I agree with You that I am a sinner. I believe You love me and want to save me. I believe that You bled and died on the cross to pay the penalty for my sins. I believe that You rose from the dead. Please forgive my sins and come into my heart and be my Lord and Saviour. Thank You Lord Jesus Christ for forgiving me and saving me through Your merciful grace. Amen.

You are now a Christian if you said the prayer and allowed God to save you. Welcome to the family of God.

Have a great day!

Greed, that potential bad character that we have tapped and used for good in out semi capitalist system, is an almost irresistible pull on some people.

I know quite a few people who during the mid to late '90's were so impressed by the stock market goings on, that they put all or most of their retirement investments in risky, high yielding investments. A couple invested exclusively in Tech stocks. Guess how much money they have today? (answer - not a whole lot) They won't be retiring early *or* soon.

On the other hand, I was very careful with my retirement investments, and didn't lose anything. All I did was take a hit in my earning rate. Until the bubble burst though, Len wasn't the only person that thinks I'm a dimbulb!

>
>And let's not forget Farnsworth. This will confuse matters a bit.

Not at all. Farnsworth spacing only affects the space between letters/numbers,
not the space between dits and dahs. Hence any properly-designed decoder -
hardware, software or wetware - will deal with it easily.

>I
>have seen CWGet confuse S for O until it "settles in".

Then CWGet needs some work. A human operator with basic skills will not make that mistake. dididit doesn't sound anything like dahdahdah.

>My guess is that Farnsworth Morse might be involved.

Naw, just a software problem.

>But it is odd that a binary method requires all that software. ;^)

Who said it was binary?
>
>But I think I have the confusion figured out. What is happening is that
>people are starting by defining Morse code as a 2 state on and off
>system, and trying to offer proof of that by suddenly changing that to a
>base 2 system.

Something like that. Of course a binary system can deal with a lot more numbers than 0 and 1.

>Can anyone offer a proof that does not switch between the two definitions?

Depends on your definitions.

It's like saying a balloon reaches an altitude of 100,000 feet. You have to also say "above what?"

>I cannot accept Morse as a two part on and off system because there are
>more than two parts, as is made clear when people try to switch to base 2.

It's about time.

You're in trouble.

>Unless there are strong protections, (which will end up a
>huge drain on the 'Guvmint) there may be people who suddenly find
>themselves poor.

There's a basic rule of investment that return and risk are directly connected.
If you want low risk you have to accept less return. One would think that even
a lackluster student like Shrub would understand that concept, but he once
again proves his basic nature as a forty watt bulb in a hundred watt socket.

> What are the politicians going to raid for extra money?

They don't look that far ahead. Heck, they're not even concerned about paying
back the money already borrowed from the SS system.

You are certainly an exception and up to about 20 years ago marriages usually worked. But you folks know as well as I do how many shit the bed in the past 20 years. You all know PLENTY of them.

I hope it lasts 20 more.

Thanks. I understand your attitude. Don't give up though. It really is cool when you find the right one. If you do get lucky, make sure you /she or somebody can cook. The first thing to f--k up a home is bad food!! ;)

Subject: FW: MRE Dinner Date
Importance: Low

This was from a grunt whose date unwittingly asked him to cook for her.
Anyone who has had to eat MREs--or for we graybeards, C-Rats--for months
during deployments will appreciate this.

> ----------
> by Frank Rodgers

Unfortunately, humans often don't act that way. In fact I knew a few
folks that wanted to "get just a little bit more" for their retirement.
Their investment counselors actually allowed them to move their money
from safe investments to risky ones. All for the sake of a few more
dollars a month. Yoiks!

And widespread gambling in the US is testament to that fact.

I guess the money isn't "borrowed" then is it?

The part I look forward to is going to be how they try to blame THAT on
the leeburalls........ 8^)

You found out the secret!

How the hell else are you going to last a long time with someone if they are not your friend. Besides being friends the only other thing required is that you both share the expectations of the marriage like kids, money and who does what.

If they have correspondence courses, I am sure they will if you
flash the right amount of green or acceptable plastic.

And then you too will have a pretty certificate suitable for
framing.

Just like the rest of us.

Until then, you're still a liar. You're stil a cheat. You're
still deciteful. You're still not licensed nor experienced in the
Amateur Radio Service.

>
>Some of these guys were there. They might know Vails actual role...

Heh heh heh. I'm sure they think they were... :-)

However, there IS a website for the Vail Family and much discussion
of what Alfred did insofar as the Morse-Vail Telegraph. The Vail
family bankrolled Sam while he tried (and failed) to improve the inking

system that was the first method of reception - a thin pen marking on paper. No beeps until good old Reggie Fessenden built the first "BFO" using a low-power spark thing...his "heterodyne detector." Ed A. and his SUPERheterodyne didn't show up until 1918.

>> Coslonaut might just think that off times have great value...as in

>Now, now, now, Len. The off times must be important. It's the only
>way the ARRL can explain away how they can send a supposedly "Morse
>Code Exam" at 13-15 WPM and still claim it meets the FCC's 5WPM rate.

I still find it strange that the FCC maintains a morse code test for amateur privileges below 30 MHz some 161 years after the first Morse-Vail Telegraph system started up.

>And if these guys silenced themselves, then where will we ever get gems
>like, "...A morse code exam would be a deterrent to morse code use.
>N2EY"
>
>Hi, hi!

Well, I can well imagine that the ARRL would collect all those "gems" in a book for sale on-line (shipping charges extra). Prolly $19.95 at 100 pages. Profit maker. Collectors' item.

I gotta love the hairy and hoary old slogan, "Morse gets through when nothing else will!" That one's been around longer than I have, I think.

Next to that is the "reason" for maintaining that code test "so that American hams can talk to foreign hams in the 'universal language' of morse code!" Like all U.S. amateurs are "supposed" to talk to foreigners instead of the 700+ thousand licensees on U.S. soil?

Oh, yeah, and the ARRL never ever lobbied for anything in regards to morse code and it was "entirely" the FCC's fault in dropping the maximum rate to 5 WPM (allegedly 5, but aperiodic to 15 for individual characters). ARRL is NEVER at fault...it's always the fault of someone else. League and morsemen can do no wrong.

Did dit.

And on the seventh day HE gave us Marconi & Tesla.

I go to church every Sunday, when I watch my team play Aussie Rules
football..the only true religion in Australia

And as Kent Brockman once said "Christian, Hindu, Islam..tonight we reveal
which one is the true religion"

PS. Ever notice that Simpsons is about the only show of my generation to
feature Amateur Radio? (Patty & Selma are hams)

Yet another unsolicited rendering of religious fervor...Just what the world needs...Yet another "evangelist" to "save" us from someone else's religion.

I am in the wrong business.

Instead of saving lives, I will save souls...Put up an internet "crusade", then evenutally an HF broadcast station from which to solicit tons of donations from sick, dependent and scared people who think if they don't send me $10 right now they are going straight to Hell.

Eventually I can get a real, live satellite program of my own and really rake in the big bucks. Then I can allow myself to be "found out" having the same sex that every other heterosexual male in the world enjoys, take a huge golden parachute severance pay from my now-mega-million "congregation" and retire to some South Pacific island of my own.

Of course then I will have to contend with Dieter Stussy daring me to 'come out and argue the issues' over donations.

I was going to pursue a career in quasi-professional electronics engineering by hijacking others proprietary work, but they told me some idiot in California already tried that schtick...Now they look out for guys like that! My luck...a day late and a dollar short. Wonder who the idiot was...?!?!

Steve in Winchester, TN

Where the Bible Belt meets the Chastity Belt...On the Floor!

So Jim thinks that Bush will mandate Tech Stocks as the only investment strategy for SS diversions? How about Gold? OJ futures? Shirley Bush will see the wisdom in futures?

Jim thinks that one could not tailor their SS diversions according to their nearness to retirement?

Jim holds no stock market investments. Jim's pension plan holds no stock market investments. Jim is a 100% treasury note kind of guy. Jim is safe. Jim is smart.

Jim thinks Jim is the only 100 watt bulb around. Jim could get us to the moon and back. Hi!

Those two plans. We also have an additional TDA possibility from various companies. On the state plan, there is not a lot you can do. On the other plan, there are more investment options.

Good News!

Do you know how simple it is to go to Heaven after this life has ended?

The good news is that God came from Heaven to earth in the person of Jesus Christ over 2000 years ago and died for our past, present and future sins(misdeeds). He was born in the land of Israel supernaturally to a virgin Jewish woman named Mary. He lived a sinless life for thirty-three years and then sacrificed His sinless blood and died on a cross to pay the death penalty for our sins.

After Jesus died He rose from the dead three days later as He said He would. The Holy Bible also tells us that Jesus Christ ascended into Heaven and that all who accept Him as their Lord and Saviour will live forever with Him in Heaven where there is no more death, sorrow, sickness and pain.

The Holy Bible very clearly explains how simple it is to be saved and on your way to Heaven, "For if you confess with your mouth, "Jesus is Lord," and believe in your heart that God raised him from the dead, you WILL BE SAVED." (Romans 10:9)

You can be saved right now and on your way to Heaven if you will open your heart to Jesus and pray the following prayer:

Dear Jesus Christ, I want to be saved so that I can have a home in Heaven when I die. I agree with You that I am a sinner. I believe You love me and want to save me. I believe that You bled and died on the cross to pay the penalty for my sins. I believe that You rose from the dead. Please forgive my sins and come into my heart and be my Lord and Saviour. Thank You Lord Jesus Christ for forgiving me and saving me through Your merciful grace. Amen.

You are now a Christian if you said the prayer and allowed God to save you. Welcome to the family of God.

Have a great day!

Do they limit your options to somewhat wise, conservative investments?

Or are you options wide open? Probably not.

The Federal Government would likely put limits on the types of
investments you could make with your SS diversion. No gold and
platinum futures, for example. As you graduate to an older age group,
they would probably change the investment vehicles available. Gosh!

But that's just me thinking out loud. I heard from Al Franken that
Bush doesn't want any ideas on this matter.

The point is that you do have a government pension plan.

TDA? Is that like a supplemental, tax-deferred investment option?
Ohio has a 457, "deferred compensation," plan, which is in addition to
the public employees retirement system.

http://nrsretire.nrsservicecenter.com/nrs/CDA/nrsEmployeeHome/?Site=Ohio

Ohio also has five (5) public employees retirement systems for some
reason.

http://ohio.gov/Retirement.stm

If you want to see something scary, look at the Federal Employees Retirement System. They tell you right up front that SS is "the rest of your retirement." Not the so called safety net that Jim and FDR described it as.

Shouldn't be a problem. For all the democratic years that the fund has
been raided, noone has ever tried to pay it back.

>dollars a month. Yoiks!

One reason Social Security was created in the first place was that a large number of people had lost their life savings in the markets of the 1920s. Not just the stock market - the bond markets and even banks played loose and fast.

One of the prime directives of Social Security was that it was the backup, the low-risk survival alternative.

>And widespread gambling in the US is testament to that fact.

There's nothing wrong with gambling *if* you recognize the real chances of winning *and* don't gamble with money you cannot afford to lose.

>>> What are the politicians going to raid for extra money?

>> They don't look that far ahead. Heck, they're not even concerned about
>> paying back the money already borrowed from the SS system.

>I guess the money isn't "borrowed" then is it?

Check this out:

Shrub just submitted his new budget. Not surprisingly, there are all kinds of cuts for domestic programs, and even some for veterans' benefits.

But what's really interesting is that the spending plan only goes out one year - if that far. Previous budgets plan out 5 years so lawmakers can see "longterm" effects and trends. The new budget proposal doesn't show any of that. Heck, according to the news, American troops will be out of Iraq before year's end because there's no money in the budget for them after about October of this year.

Cool, huh?

>The part I look forward to is going to be how they try to blame THAT on
>the leeburalls........ 8^)

I dunno, but they'll find a way. It's always the other party's fault.

Ask Len - he's our resident liberal.

Very wise words, from someone who understands human interaction. Too
often one person or the other in a couple thinks they can "reform" the
other person's bad habits. This only leads to misery and an eventual
breakup. When you sign up to the "for better or worse" deal, that
means you take the whole package, not just the parts you like. My wife

had to deal with my radios, and I had to deal with her smoking (Which fortunately she gave up when she was pregnant). That's is the nature of compromise. You compromise because underneath those surface differences, there is a greater bond of affection which should transcend those surface differences. But it should be everything in moderation. If important things in life are being postponed to address a specific hobby, then it's time for a little introspection.

Morse code testing will probably be dropped dropped before we are out of
there. That isn't being cynical or anything, just looking at the
situation and history. It would be unconscionable to leave while the
country is in such turmoil. When we do this sort of thing, it is almost
always a many year effort. My estimate is 10 years, assuming no other
involvement in the area.

> Do they limit your options to somewhat wise, conservative investments?

No.

> Or are you options wide open? Probably not.

I'm not on the system with lots of options, so I'm mentally paraphrasing
here a bit:

There are a number of options in which you can spread percentages of
your money. Those options run the spectrum from blue chip to high yield,
high risk. Your retirement income is based on your contributions and how
well the investments did.

> The Federal Government would likely put limits on the types of
> investments you could make with your SS diversion.

Ho-boy, another Federally controlled system. 8^)

> No gold and platinum futures, for example.

Probably a good idea.

> As you graduate to an older age group,
> they would probably change the investment vehicles available. Gosh!

One of the people I know that lost a lot of money was thinking that. He
said that two years before retirement, he was going to pull his money
out of the high risk stuff and put it into the "safe" stuff.

I see they have three different plans, Social Security, a basic benefit
plan and a thrift savings plan. Looks pretty much like a typical plan group.

1. Can you go without ham radio for 90 days?
Nope wouldn't want to

2. Have you gone more than three days without bathing?
no Couldn't stand the smell of myself if I did

3. Are the clothes you wear dirty and smell?
no but they got some pretty nifty stains on them

4. Do you take your meals in the ham radio shack?
but of course ham is a meal right

5. Have you constructed a separate building behind your home
for ham radio?
no but the thought has crossed my mind. Oh the possibilities

6. Do your neighbors hate you because of TVI?
nope this isn't the "chicken band"

7. Do your kids or grandkids wonder if they have a father
or grandfather?
no but they wonder if they put their head to my ear if they could hear
transmissions from the local repeater

8. Have you ever done a family activity which does not involve
taking your ham radios with you?
Well then it wouldn't be an activity now would it

9. Have you forced your xyl & kids to get their tickets? Be honest.
I tried to force the xyl to get her ticket, found out that a frying pan
makes a good weapon HI

10. Do people stare in awe at your car or truck because it has so
many stupid looking antennas on it?
Show me a stupid antenna and I'll show you my car now thats stupid.

11. Do you come to this forum to bicker with other hams?
Nope it's just one big happy family

Time for a new pool?

Then again, it's been 19 months and almost as many proposals
and...nothing from FCC.

> That isn't being cynical or anything, just looking at the
> situation and history. It would be unconscionable to leave while the

Why? Didn't you see the "Mission Accomplished" banner?

> When we do this sort of thing, it is almost
> always a many year effort. My estimate is 10 years, assuming no other

> involvement in the area.

I don't think this administration has a clue what they got themselves
into. For years, Reagan & "Shake Hands" Rumsfeld were SH's buddies. Now
SH's gone, thanks to massive US involvement, but the Iraqis sure seem

ungrateful.

And all the claims of weapons of mass destruction and ties to
OBL/terror have been proved to be unfounded.

Old OBL is prolly giggling himself silly, because the USA has spend
over a thousand US lives and billions of dollars to create a
recruiting/training paradise for him. And with SH gone, the USA gets to
take on the role of bad guy in the region. Sure, *we* know that the
motives were good, but somehow those folks sure don't seem to believe
it.

That's why he'll go on at length about it. He talks about all kinds of
things that have nothing to do with Morse Code testing.

And when somebody *does* try to discuss Morse Code testing in a civil,
rational way with him, he calls the person names and does the old
ad-hominem game.

>Yes, Brian and Len do avoid direct questions - every day.

No one is obliged to answer loaded questions.

However, J.P. has avoided a direct answer to HOW he "serves his country" in the near-same way someone has in the military. So has the coslonaut. All are supposed to "figure that out."

Direct question avoided, sidestepped, disguised by mis-direction onto other things.

>> Careful, Brian...remember that J.P. "serves his country" (by being
>> a super-special amateur morseman).
>
>Well, if you think so. I don't recall ever claiming that.

So...how DO you "serve your country in other ways?" :-)

>We pose valid arguments but you avoid them.

Tsk. FALSE. ERRONEOUS.

Your arguments in favor of retaining the morse code test have been proven false.

You refuse to acknowledge that replies have truth in them. You misdirect by the disguised ad hominem of saying the PCTAs "are full of errors." :-)

>Do we call you names? Tell you to shut up? Call you "anal-retentive" or
>"Republican"?

Yes, you do. In another post you've named me as a "liberal." Used that appelation as a pejorative as if only the political conservatives were the good guys. Adding, in that unique (but

transparent) disguise of an ad hominem attack cum troll bait.

>Or is that *your* game?

No "game." Seeing that reasonable discourse evaporated long
ago amidst the virtual snowstorm of all-subjects-are-suitable-for-
posting blog content in here, all that seems to continue is the
usual PCTA "superiority" pejoratives on the person of NCTAs.

In other words, you are receiving "return fire." Seeing as you
have "served your country in other ways," you should recognize
such military terms...shouldn't you? :-)

Poor baby. Can't take it, can you?

Suggestion: Fire up that state-of-the-art Type 7 and "work" some
contacts. Get on the air. Have fun with ham radio. Try to avoid
"resonable discourse" of the one-way kind by disguised ad
hominems in here...it is tough on conservative morsemen trying
to be oh-so-superior to NCTAs in here. PCTA feelings get hurt
easily.

Interesting TROLL technique. Yields the first impression that
someone else is ten kinds of badness; i.e., a disguised
ad hominem, done up in righteous flag-waving wrapping.

Tsk. My "liberality" in here is basically about the removal of
morse code testing from the U.S. amateur radio license exam.

Is that some kind of heinous "political liberality?" Is it the
mouthing of some Antichrist? Is it a personal pejorative on
someone? I don't think so.

Retention of the morse code test seems to be ingrained in
the psyche of conservative old-time hams who absolutely
insist on keeping that code test forever and ever. Morse code
mode IS ham radio to some of those morse mavens. They
must remain as a living museum to archaic communications
modes and desire all kinds of "respect" (they are "superior" to
all those that don't want or care for on-off keying modes) and
"recognition of greatness" (because they bought into the
morse myths long ago and can't admit to being deceived).
They see themselves as "leaders" in everything and look down
on all others if those others are against morse code testing.

These die-hard morse mavens (unable to look good in a
Bruce Willis toupee and tee-shirt) call anti-morse-test
advocates as "liberal" in all things because morse testing
and the morse mode is righteous "conservatism"...because
morsemanship is their thing and they are "superior" from that.

Political commentary on national and international politics
belongs in a political newsgroup. Skill in morsemanship does
NOT make for informed expertise on national politics, national

economics, finances, medical expertise, or choo-choo train stuff. Moresemen want to give that impression...but their impressions hardly make a dent in Play-Dough from their righteous hammerings.

On the other hand, morsemen come in here to vent their tumultuous frustrations of everyday life on others and wildly abandon any trace of civility or composure by yelling badness at others (see the Mad-Dog Mattis morseman's outrage). Or they adopt the holier-than-thou personna of the morse minister out to save the heathen souls who will not worship their false idols made of brass from brass-pounding (see Rev. Jimmy Who when not giving a Sermon on the Antenna Mount).

All of those self-righteous morsemen are "superior" because they have lifted themselves by their own bootstraps. They are above all others because of that. All against morse code testing are "inferior" because they do not love morse. As a result we have the rabid flaming personal warfare where the self-righteous morse test advocates must win all arguments by ANY means possible. Their "means" are perfectly acceptible. Replies in opposition are always wrong, always a personal insult. It is the PCTA "holy calling." Holy cow. Sacred cow. Mooo. Booo.

"Reasonable discourse" in here ended years ago.

PCTA in excelsior! [packed in wood chips ready for shipping]

Absolutely the very same "technique" you have employed in this
forum over and over and over and........

> Tsk. My "liberality" in here is basically about the removal of
> morse code testing from the U.S. amateur radio license exam.

And taking liberties with the truth...

> Is that some kind of heinous "political liberality?" Is it the
> mouthing of some Antichrist? Is it a personal pejorative on

Of course you don't.

You have no stake in any of what you propose, nor will any of the
changes you propose have any effect on you.

> Retention of the morse code test seems to be ingrained in
> the psyche of conservative old-time hams who absolutely
> insist on keeping that code test forever and ever.

You have no stake in any of what you propose, nor will any of the
changes you propose have any effect on you.

But you ARE a "liberal", Lennie.

You show gross disrespect for the Armed Forces by misrepresenting your own service therein and taking the sacrifices of others as your own.

Just like your Hero William Jefferson Clinton, you take liberties with redefining "truth", and any other definition based upon how hard the hammer's being dropped on your head.

Most of the time it's pretty hard since you keep insisting on psoting deceitful and bogus tripe.

> Political commentary on national and international politics
> belongs in a political newsgroup.

Here we have "this is an unmoderated newsgroup"/"you are not a moderator" Lennie Anderson telling us what we can discuss, where we can discuss it, etc.

> Skill in morsemanship does
> NOT make for informed expertise on national politics, national
> economics, finances, medical expertise, or choo-choo train
> stuff.

Nope...but it DOES make us qualified to be licensed Radio Amateurs, a feat you have yet to accomplish.

> Moresemen want to give that impression...but their
> impressions hardly make a dent in Play-Dough from their
> righteous hammerings.

They obviously DO "make an impression" because you feel compelled to keep coming in here and making issue os practices and policies for an avocation in which you are not a participant.

> On the other hand, morsemen come in here to vent their
> tumultuous frustrations of everyday life on others and wildly

> abandon any trace of civility or composure by yelling badness

"Morsemen" have a reason to be in an Amateur Radio forum, but who is "Mad-Dog Mattis"...?!?!

> Or they adopt the holier-than-thou personna of the morse minister
> out to save the heathen souls who will not worship their false
> idols made of brass from brass-pounding (see Rev. Jimmy Who
> when not giving a Sermon on the Antenna Mount).

Who is "Reverend Jimmy"...???

What "sermon"...???

> All of those self-righteous morsemen are "superior" because they
> have lifted themselves by their own bootstraps.

Whelp, Your Putziness, that IS what Amateur Radio is all about.

Part 97 refers.

> They are above
> all others because of that. All against morse code testing are
> "inferior" because they do not love morse.

Other than you, who said that, Lennie? Names? Posts? Show your work.

> As a result we have
> the rabid flaming personal warfare where the self-righteous

Looks nothing like the former SCRS. Does Penn State contribute 1% of your income to your plan, then tell you that SS is the rest of it?

Anyway, the only benefit to being in SS is if you have a life changing injury or illness and can no longer work. If you take it to 65 (or 67 depending on the whims of the democratic party) the ROI is slim to none. Savings bonds beat it.

I view that position as conservative. Ronald Reagan wanted to unburden
the citizens of unnecessary government regulations.

Good News!

Do you know how simple it is to go to Heaven after this life has ended?

The good news is that God came from Heaven to earth in the person of Jesus Christ over 2000 years ago and died for our past, present and future sins(misdeeds). He was born in the land of Israel supernaturally to a virgin Jewish woman named Mary. He lived a sinless life for thirty-three years and then sacrificed His sinless blood and died on a cross to pay the death penalty for our sins.

After Jesus died He rose from the dead three days later as He said He would. The Holy Bible also tells us that Jesus Christ ascended into Heaven and that all who accept Him as their Lord and Saviour will live forever with Him in Heaven where there is no more death, sorrow, sickness and pain.

The Holy Bible very clearly explains how simple it is to be saved and on your way to Heaven, "For if you confess with your mouth, "Jesus is Lord," and believe in your heart that God raised him from the dead, you WILL BE SAVED." (Romans 10:9)

You can be saved right now and on your way to Heaven if you will open your heart to Jesus and pray the following prayer:

Dear Jesus Christ, I want to be saved so that I can have a home in Heaven when I die. I agree with You that I am a sinner. I believe You love me and want to save me. I believe that You bled and died on the cross to pay the penalty for my sins. I believe that You rose from the dead. Please forgive my sins and come into my heart and be my Lord and Saviour. Thank You Lord Jesus Christ for forgiving me and saving me through Your merciful grace. Amen.

You are now a Christian if you said the prayer and allowed
God to save you. Welcome to the family of God.

Have a great day!

Good News!

Do you know how simple it is to go to Heaven after this
life has ended?

The good news is that God came from Heaven to earth
in the person of Jesus Christ over 2000 years ago and
died for our past, present and future sins(misdeeds).
He was born in the land of Israel supernaturally to a
virgin Jewish woman named Mary. He lived a sinless life
for thirty-three years and then sacrificed His sinless
blood and died on a cross to pay the death penalty for
our sins.

After Jesus died He rose from the dead three days later
as He said He would. The Holy Bible also tells us that
Jesus Christ ascended into Heaven and that all who accept
Him as their Lord and Saviour will live forever with Him
in Heaven where there is no more death, sorrow, sickness
and pain.

The Holy Bible very clearly explains how simple it is
to be saved and on your way to Heaven, "For if you
confess with your mouth, "Jesus is Lord," and believe
in your heart that God raised him from the dead, you
WILL BE SAVED." (Romans 10:9)

You can be saved right now and on your way to Heaven if
you will open your heart to Jesus and pray the following
prayer:

Dear Jesus Christ, I want to be saved so that I can have
a home in Heaven when I die. I agree with You that I am a
sinner. I believe You love me and want to save me. I
believe that You bled and died on the cross to pay the
penalty for my sins. I believe that You rose from the dead.
Please forgive my sins and come into my heart and be my
Lord and Saviour. Thank You Lord Jesus Christ for
forgiving me and saving me through Your merciful grace.
Amen.

You are now a Christian if you said the prayer and allowed
God to save you. Welcome to the family of God.

Have a great day!

I think a large number of them are grateful, but a large number are
not. Iraq is an artificial country, cobbled together from disparate
groups that have had a tradition of not getting along well. Let us hope
they will catch onto democracy after a few years.

We're back to it Brian...last chance to suck it up and keep things gentlemanly.....

Otherwise tell us about your undocumented, illegal operation from Somalia. It was OK, supposedly, becasue some butter bar gave you the nod, but your butter bar was not a representitive of the UN officers who were in charge at the time.

After that you can get around to providing us the links that corroborate your "Unlicensed devices play a major role in emergency comms" assertion.

Then you can provided us some sort of verification of your claim of having worked the equivilent of DXCC a couple times over.

Those are radio-related issues that you claim expertise, experience or otherwise are knowledgeable of.

So far you've provided us absolutely nothing, and those are just the RADIO related issues.

And if your nose isn't bruised and bloodied enough after that, there are some other issues I will be glad to regurgitate for NG consumption, but we'll wait and see if you decide to exercise some

So...You up to getting your NG butt whupped again, or do you just want to forget that you re-opened a can of worms that folks were just now starting to forget?

No, they have not.

> You refuse to acknowledge that replies have truth in them.
> You misdirect by the disguised ad hominem of saying the
> PCTAs "are full of errors."

To the contrary. Jim has repeatedly acknowledged what he thought
were "valid points" in your arguments.

So far all YOU have done is call him names, attempt to disparge
his character and experience, and avoid answering the same questions
when put to you!

> >Do we call you names? Tell you to shut up? Call you "anal-retentive"
or

The "reasonable discourse" disappeared in a vail of smoke from
profanities and name calling delivered from the keyboard of Leonard H.
Anderson.

Google refers.

> In other words, you are receiving "return fire." Seeing as you
> have "served your country in other ways," you should recognize
> such military terms...shouldn't you?

Ahhhhhhh! Lennie hoping no one remembers his "under fire" and
"under threat of the Russian Bear" posts.

The only "fire" Lennie was under was some Tiki lights of some
Japanese sushi bar just outside his rear area radio staion base.

> Poor baby. Can't take it, can you?

I don't think it's a "hapenin' thing", Mike.

They've got that "olde tymme religion" fervor going on, and now
they also have millons of metric tons of things taht go boom and bang.

They blame their "problems" on the United States or Isreal, but if
we could snap our fingers and vacate Iraq right now, and somehow make
Isreal a "non-issue" for them, then they'd just go back to Shiite-Sunni
fights, Iran/Iraq, etc etc etc.

I think the most impressive election was ours...And why we don't
make more "hay" out of it is beyond me...The most powerful, richest
nation in the world manages to change it's government every 4 years
without firing a shot...Imagine that...

Has anyone read the engineering specs on Heaven in the Bible?

It ain't that big. Read Revelation 21:15 through 21:21.

And supposedly only the names of the 12 tribes of Israel are on the walls. Maybe I missed something in there, but most of us don't have any Hebrew blood in us.

Someone needs to get thier stories straight.

I'm still giggling over the pregnant chick and the "I didn't have sex with that woman" story. Guess I know where Bill got it from...It worked before...Guess I can't fault him for trying it!

Yup. A lot of people don't take that approach though. They listen to the investment mantra that "Over the long term, the market always goes up". Unfortunately their advisor neglects to tell them that what matters is where the stock market is when they retire.

And for whatever reason, they don't figure that out for themselves.

>> Your retirement income is based on your contributions and how

Sounds like a bad idea. Not specifically about Ohio, but limiting
investments to a particular area is almost like investing in only the
high risk areas.

Nope.

I pretty much agree.

Republicans are in power now. They have assumed the mantle of
responsibility. It is now their whims that count.

You are probably right. I think the way things are turning out, we just
have to give it the chance.

> They've got that "olde tymme religion" fervor going on, and now

Aas usual, religion will once again play a major part in death and
destruction in the world.

And let us hope it stays that way. Perhaps as long as we can keep the religion out of guvmint.

Of course. Trouble is, guys like Shrub think that Iraq in 2004 is going to be like France in 1944, with the locals blowing kisses to American tank drivers and no resistance movement. The reality is more like Vietnam in 1964.

> Iraq is an artificial country, cobbled together from disparate
> groups that have had a tradition of not getting along well.

That's putting it mildly. Look at Northern Ireland - those folks are all nominally Christians, and almost identical ethnically.

> Let us hope they will catch onto democracy after a few years.

Whose version of "democracy"? American democracy, where someone can get the most popular votes and still not be elected?

Last night there was an excellent documentary on Frontline about the history of Saudi Arabia. Watch for it - they often rerun such shows. it explains a lot about the region and the USA's role there.

Transcript may be available on their website.

1349. The Pool

Newsgroup: rec.radio.amateur.policy
Date: 2005-02-09 23:03:58 UTC
From: N2EY@AOL.COM
Message-ID: <1107990238.904624.123740@o13g2000cwo.googlegroups.com>
Source record: 102865

Here's an update on the old "when will FCC drop Element 1?" pool. Note how almost everyone's date, including mine, has already past:

WA2SI: September 13, 2003
KF6TPT: September 29, 2003
KC8EPO: December 31, 2003
K2UNK: January 1, 2004
K2ASP: March 15, 2004
AA2QA: April 1, 2004
N2EY: April 15, 2004
N3KIP: May 1, 2004
KC8PMX: July 1, 2004
WA2ISE: August 1, 2004
K3LT: September 15, 2004
WK3C: December 30, 2004
N8UZE: July 1, 2005
KB3EIA: July 5, 2007
W5TIT: June 1, 2008

Anybody want to add a prediction?

Or should we start a new one?

73 de Jim, N2EY

Not at all, Len. You've behaved exactly as described so many times
you've become very predictable.

> Tsk. My "liberality" in here is basically about the removal of
> morse code testing from the U.S. amateur radio license exam.

You described the recent second inauguration of the president as
a "coronation". Which leads any reasonable person to believe you
did not vote for him. Lots of other comments on non-amateur-radio
subjects back up that impression.

> Is that some kind of heinous "political liberality?"
> Is it the mouthing of some Antichrist?
> Is it a personal pejorative on
> someone? I don't think so.

Who said it was?

Do you think being called a liberal is a pejorative, Len?

> Retention of the morse code test seems to be ingrained in
> the psyche of conservative old-time hams who absolutely
> insist on keeping that code test forever and ever.

Is that wrong? Is it electropolitically incorrect to think that
at least some Morse Code testing should be retained for an

amateur radio license? I don't think so.

But you act like it is a terribly wrong thing to advocate.

> Morse code
> mode IS ham radio to some of those morse mavens.

So? Ham radio is many different things to many different people. It cannot be much to you, Len, because you've never bothered to even become a ham radio operator.

> They
> must remain as a living museum to archaic communications
> modes and desire all kinds of "respect" (they are "superior" to
> all those that don't want or care for on-off keying modes) and
> "recognition of greatness" (because they bought into the
> morse myths long ago and can't admit to being deceived).
> They see themselves as "leaders" in everything and look down
> on all others if those others are against morse code testing.

There you go, Len, starting with the pejoratives and put-downs and ad-hominem demonization of people who have opinions different than yours.

Just as predicted. You do it every time.

> These die-hard morse mavens (unable to look good in a
> Bruce Willis toupee and tee-shirt) call anti-morse-test
> advocates as "liberal" in all things because morse testing
> and the morse mode is righteous "conservatism"...because
> morsemanship is their thing and they are "superior" from that.

I called you a liberal based on things other than Morse Code testing, Len.
Such as your "coronation" comment, and other things. You also use the term "conservative" as a negative thing, which reinforces the impression.

> to this problem?

Put a plate under the roof, if you're willing to remove the headliner,
or on top of the roof, if you're not, to stiffen that area. I think that
under would be better for multiple reasons, and you've got to get into the
headliner anyway to deal with the cable, don't you? You shouldn't need a
lot of plate -- say 6" square or 6"x12", with the long axis oriented
front-to-back. The NMO mounting nut may be enough, or you may want to use a
couple of fasteners to keep the plate straight.

>> due to the thin metal in the trucks' roof. Has anyone found a
>> solution to this problem?

Temporarily you could loosen the NMO mount ring and look to see if the two tabs which fit UNDER the roof metal are aimed forward and rear. If so, you could simply turn the assembly 90 degrees so that the two tabs now fit under the roof hole right and left side. This is assuming that the tilt was due to the bending of the front to rear part of the hole, but left and right side of the hole still being flat.

Ultimately, some kind of added thin steel plating under the roof hole would be the only thing I can think of at the moment. I've seen some plating added to the top side, which worked, but looked like heck.

```
Good News!

Do you know how simple it is to go to Heaven after this
life has ended?

The good news is that God came from Heaven to earth
in the person of Jesus Christ over 2000 years ago and
died for our past, present and future sins(misdeeds).
He was born in the land of Israel supernaturally to a
virgin Jewish woman named Mary. He lived a sinless life
for thirty-three years and then sacrificed His sinless
blood and died on a cross to pay the death penalty for
our sins.

After Jesus died He rose from the dead three days later
as He said He would. The Holy Bible also tells us that
Jesus Christ ascended into Heaven and that all who accept
Him as their Lord and Saviour will live forever with Him
in Heaven where there is no more death, sorrow, sickness
and pain.

The Holy Bible very clearly explains how simple it is
to be saved and on your way to Heaven, "For if you
confess with your mouth, "Jesus is Lord," and believe
in your heart that God raised him from the dead, you
WILL BE SAVED." (Romans 10:9)

You can be saved right now and on your way to Heaven if
you will open your heart to Jesus and pray the following
prayer:

Dear Jesus Christ, I want to be saved so that I can have
a home in Heaven when I die. I agree with You that I am a
sinner. I believe You love me and want to save me. I
believe that You bled and died on the cross to pay the
penalty for my sins. I believe that You rose from the dead.
Please forgive my sins and come into my heart and be my
Lord and Saviour. Thank You Lord Jesus Christ for
forgiving me and saving me through Your merciful grace.
Amen.
```

You are now a Christian if you said the prayer and allowed
God to save you. Welcome to the family of God.

If you decide to wait till later you may die before you get
another chance to be saved because none of us knows
exactly when we will die.

Have a great day!

Loosen the NMO mount rig. Straighten the antenna but dont
retighten yet. Squeeze a liberal amount of J& B weld into the
hole. Retighten the NMO ring. A simple fix that works every
time.

73,

Lloyd

Things are gentlemanly. If you wish to change the situation, it's on
you.

Best of Luck.

> Otherwise tell us about your undocumented, illegal operation
from
> Somalia. It was OK, supposedly, becasue some butter bar gave you the
> nod, but your butter bar was not a representitive of the UN officers
> who were in charge at the time.

Obviously you weren't there, or you'd be able to make reference to 8
hostile actions. And I don't reall a single LT, butter bar or not. We
tend to deploy with our experienced people. I did see one reserve
Staff Sargeant, but that was about the lowest rank I saw. He wasn't in
the UN either.

> After that you can get around to providing us the links that
> corroborate your "Unlicensed devices play a major role in emergency
> comms" assertion.

Go get a better quote.

> Then you can provided us some sort of verification of your claim

>
> Steve, K4YZ

Steve, I don't believe you've ever given anyone else a "butt whooping."
Perhaps in some fantasy kind of way.

Anyway, when are you going to tell us your 7 war stories?

Mike, how quickly you wish to forget the democrat legacy. I can't blame you. But apparently I've been brainwashed by the dems for the past 30 years that SS will be bankrupt by the time its my turn to feed at the trough. Ask anyone in their 40's if SS will be there for them when they retire, and you'll not get a lot of positive answers. Or do you disagree?

You've become reclusive. It started about the same time that you said words to the effect that a morse code exam would be an obstacle to morse code use.

> > Tsk. My "liberality" in here is basically about the removal of
> > morse code testing from the U.S. amateur radio license exam.

> yours.

But Jim, several Extras absolutely have claimed that it is the ancient mode which gives them their greatness, demanded respect for such, and claimed superiority in all of the radio sciences and arts for this single skill.

So how can you claim it to be perjoritives and ad-hominem demonization of people who have put forth exactly those ideas?

How about making it a "rolling pool"? Once a person's date has passed, they
can choose another and get re-added to the list.

Through all this thread, I have noted that there were multiple choices of investments. And my comments have ben that many people are not capable of resisting the "big bucks" risky investments. I account for human nature in my assessments of how people should be treated.

Fact is, an awful lot of people NEED some fiscal restraint. Otherwise they make stupid choices and become a drain on society. It is how it is. It is why people on welfare buy lottery tickets when they should be buying food or paying their rent. It is why people think they can make risky investments, and somehow retire to make more money than when they were working.

>

I'll make an assumption that this "Jones office is some kind of investment outfit. I probably wouldn't make so much money because I wouldn't try to talk people into investing their money in things that I think they would lose it with. But then again, I don't think Mr. investment advisor is my friend.

There are many different time frames on exactly *when* the system will run out of steam or money. A lot of this depends on how much money is taken out by non-standard usage. (read robbing the till)

I don't care WHO took the money out. Be it Democrat or Republican. One of the side effects of being in power is that when it is your group, you reap the benefits as well as the brickbats.

If all the Pubs can do is continue to blame the Dems for every problem on the face of the planet, then it means that they are *weak*, because they can't do anything about the Democrats even when they are in power. Funny how things work! 8^)

Proud to be an independent. ... - Mike KB3EIA -

Kinda takes the fun out of it, Dee. Anyhow, if we did do it again, I
might add a year or so to my prediction.

> > We're back to it Brian...last chance to suck it up and keep
> things
> > gentlemanly.....
>
> Things are gentlemanly. If you wish to change the situation, it's on
> you.

Not when one of the parties insists on trying to berate the others
in public, Brain. Fights on. It was your deal, so now these are the
card you have to play.

> Best of Luck.

I've not once needed "luck" in dealing with you, Brain. You post,
you make a fool out of yourself, I have fun with it. It's almost too
simple.

> > Otherwise tell us about your undocumented, illegal operation
> from
> > Somalia. It was OK, supposedly, becasue some butter bar gave you
the

We
> tend to deploy with our experienced people. I did see one reserve
> Staff Sargeant, but that was about the lowest rank I saw. He wasn't
in
> the UN either.

Regardless of the grade of officer involved, you had no legal
basis from which to operate a radio transmitter except in the official
line of duty while in Somalia. And please notice I did not say he was
a UN officer...As a matter of fact I pointed that out to you. That's
part of the reason your operation was illegal.

Your operation was bogus from day one.

> > After that you can get around to providing us the links that
> > corroborate your "Unlicensed devices play a major role in emergency
> > comms" assertion.
>
> Go get a better quote.

No better quote to get, Brain. They were your words to start
with.

YOU said that unlicensed devices play a ""major" role in disaster
comms.

Now, I want YOU to back your claim up, or just admit you were just
running off at the mouth for lack of anything impressive to say hoping
that we would just roll over an believe you.

> > Then you can provided us some sort of verification of your
claim
> > of having worked the equivilent of DXCC a couple times over.
>
> Go get a quote for that one, too.

Still don't need one.

You allegedly worked enough countries to get DXCC from HL, then
allegedly did it again from KH. Just like your illegal Somalia
operation, there's not one iota of proof that you did it in EITHER
place.

If you did it, prove it. Otherwise you're just lying.

> > Those are radio-related issues that you claim expertise,
> > experience or otherwise are knowledgeable of.
> >
> > So far you've provided us absolutely nothing, and those are
just
> > the RADIO related issues.
>

> > consumption, but we'll wait and see if you decide to exercise some
>
> "Bruised and bloody." Interesting choice of words. Are you doing
some
> kind of violence?

If you consider your reputation and character as being something
worth protecting, yeah, I am. But then it's only because I am hold my
"virtual fist" out in front of me and you continually back up, get a
head of steam up, then run into it full force. Just like the above
paragraphs.

You didn't do those things. Period. Stop lying about it.

> > So...You up to getting your NG butt whupped again, or do you
> just
> > want to forget that you re-opened a can of worms that folks were

just
> > now starting to forget?
> >
> > Steve, K4YZ
>
> Steve, I don't believe you've ever given anyone else a "butt
whooping."
> Perhaps in some fantasy kind of way.
>
> Anyway, when are you going to tell us your 7 war stories?

I don't need to tell "war stories", Brain. Show me someone who
makes a habit of telling "war stories" and I can show you a guy who is
making up half of what he is telling and the other half was probably
the tale of a third person.

Kinda like Lennie and his "2.2 million messages" stories and how
he "served under the threat of the Soviet Bear..." Oh..And we can add
in his "you don't KNOW what it's like to be under incomming artillery
fire..." story. THOSE were PRICELESS!

Now we have Brain telling us about emergency comms, DX operation
from a country where he operated illegally, and supposed DXCC
accomplishments without a single bit of proof.

BTW...I'll throw YOU a bone to chew on...I don't care to discuss
my combat service. As I have admitted before it was wrong for me to
discuss then, and it is now. If YOU want to call me a "liar" for that,
be my guest, however you'd still be wrong. However we STILL have tons
of OTHER things that ARE thoroughly documented, ie: my accomplishments
in Amateur Radio, CAP, etc.

Now...about those T5, HL and KH logs...?!?!?

Steve, K4YZ

There's also the fact that investment information isn't always on the
up and up. Despite all the regulations, we still have messes like
Enron. Even if those responsible for the Enron debacle go to jail for a
while, it won't bring back the money investors lost.

> >>A lot of people don't take that approach though. They listen > >>to

Sort of. The problem is that unless you buy nothing but index funds,
you're not investing in "the market". And even if you do buy index
funds, you're investing in a particular index.

Y'know what's funny? The same folks who say we don't need restraint
when investing life savings are the same ones who want to restrain stem
cell research, recreational chemicals (except tobacco and alchohol),
contraception, and a bunch of other things.

He lost both his principle (move to lower risk as you get older) and
his principal (original investment)

> There are many different time frames on exactly *when* the

> money is
> taken out by non-standard usage. (read robbing the till)

Yep. Of course if one administration takes it out and promises
to put it back, and a following administration run by the
other party breaks the promise, who is to blame?
>
> I don't care WHO took the money out. Be it Democrat or
> Republican. One
> of the side effects of being in power is that when it is your

> reap the benefits as well as the brickbats.

There's also the concept of responsibility. Which means that
the folks in power, red, blue or purple, cannot simply blame
everything on their predecessors and do nothing to fix the
problems.
>
>If all the Pubs can do is continue to blame the Dems for

Here's an update on the old "when will FCC drop Element 1?" pool. Note how almost everyone's date, including mine, has already past:

WA2SI: September 13, 2003
KF6TPT: September 29, 2003
KC8EPO: December 31, 2003
K2UNK: January 1, 2004
K2ASP: March 15, 2004
AA2QA: April 1, 2004
N2EY: April 15, 2004
N3KIP: May 1, 2004
KC8PMX: July 1, 2004
WA2ISE: August 1, 2004
K3LT: September 15, 2004
WK3C: December 30, 2004
N4PGW:May 22, 2005
N8UZE: July 1, 2005
KB3EIA: July 5, 2007
W5TIT: June 1, 2008

Anybody want to add a prediction?

New "rolling rule" (thanks Dee, N8UZE): If your prediction is a year or more in the past, you can add a new one. At this point K2UNK and everyone before him can add a new prediction. All predictions stay on the list.

73 de Jim, N2EY

You and Brian avoid unloaded questions as well. You avoid any question
that might prove you to be mistaken about something.

You've done it time and again. Therefore, no one should feel any
obligation to answer *your* questions.
>
> However, J.P.

Who is "J.P.", Len? No one here uses those initials as a screen name or
signature.

> has avoided a direct answer to HOW he "serves
> his country" in the near-same way someone has in the
> military.

You can't be talking about me, then, because I've never claimed
to ""serves [our] country" in the near-same way someone has in the
military."

What I *have* asked is whether uniformed military service is the
only way someone can serve our country.

> So has the coslonaut.

Who is that, Len?

Is there something wrong with you - some sort of mental illness,
perhaps - that prevents you from calling people by their first names

and/or callsigns? Or are you just behaving like a jackass?

Or is there some other reason? Tell us why you make up insulting names
for
people who only address you as "Len" or "Mr. Anderson".

> All are supposed to "figure that out."
>
> Direct question avoided, sidestepped, disguised by mis-
> direction onto other things.

We have all seen how you make fun of and denigrate others'
military service if they disagree with you. One need only
look at your classic "sphincter post" to see the lack of
regard you have for a military radio operator's service to
our country. So there's no reason for others to open themselves
up to your insults.

> >> Careful, Brian...remember that J.P. "serves his country" (by
being
> >> a super-special amateur morseman).
> >
> >Well, if you think so. I don't recall ever claiming that.
>
> So...how DO you "serve your country in other ways?" :-)

We have all seen how you make fun of and denigrate others'
military service if they disagree with you. One need only
look at your classic "sphincter post" to see the lack of
regard you have for a military radio operator's service to
our country. So there's no reason for others to open themselves
up to your insults.

> >We pose valid arguments but you avoid them.
>
> Tsk. FALSE. ERRONEOUS.

Nope. Absolutely true.

> Your arguments in favor of retaining the morse code test have
> been proven false.

By whom? Where? Certainly not by you, and certainly not here.
>
> You refuse to acknowledge that replies have truth in them.

Of course they have some truth in them. They also have mistakes,
errors and omissions.

> You misdirect by the disguised ad hominem of saying the
> PCTAs "are full of errors." :-)

I don't recall ever saying that PCTAs are full of errors.

> >Do we call you names? Tell you to shut up? Call you "anal-retentive"
or
> >"Republican"?
>
> Yes, you do.

Where? What names have you been called?

> In another post you've named me as a "liberal."

Is it true or not? Your postings here indicate you are. Perhaps I'm
mistaken, and you're just a liberal on some issues.

Let's start with the basics. Who did you vote for in the US
presidential
elections of 2000 and 2004?

> Used that appelation as a pejorative as if only the political
> conservatives were the good guys.

That's your impression. Not my meaning at all.

> Adding, in that unique (but
> transparent) disguise of an ad hominem attack cum troll bait.

Are you insulted by being called a liberal?

> >Or is that *your* game?
>
> No "game."

Seems to be.

> Seeing that reasonable discourse evaporated long
> ago amidst the virtual snowstorm of all-subjects-are-suitable-for-
> posting blog content in here, all that seems to continue is the
> usual PCTA "superiority" pejoratives on the person of NCTAs.

There's plenty of reasonable discourse here on a variety of subjects.
But you and Brian exclude yourselves from it by your behavior.
>
> In other words, you are receiving "return fire."

You return fire without being fired upon.

> Seeing as you
> have "served your country in other ways," you should recognize
> such military terms...shouldn't you? :-)
>
> Poor baby. Can't take it, can you?

It seems you are the one who cannot stand reasonable discourse and
simple, direct questions.
>
> Suggestion: Fire up that state-of-the-art Type 7 and "work" some
> contacts. Get on the air. Have fun with ham radio.

I do all those things. Except I've never claimed that the Southgate Type
7 is "state of the art". Whatever that marketing phrase is supposed to mean.

> Try to avoid
> "resonable discourse" of the one-way kind by disguised ad
> hominems in here...it is tough on conservative morsemen trying
> to be oh-so-superior to NCTAs in here.

What *are* you babbling about, Len?

Since you consider "morsemen" to be "conservative", that makes you an ultraliberal, does it not?

I'll cut Brian some temorary slack here...He had been quite civil
in the last few weeks...For some reason he's back to his old misdeeds.
Perhaps it's just a mild relapse that he'll get over.

> > In other words, you are receiving "return fire."

I always get a laugh from Lennie's use of military combat jargon,
yet he (a) never served in a live fire zone and (b) lambastes anyone
else who uses such vernacular.

> > Seeing as you
> > have "served your country in other ways," you should recognize

Not to mention that anyone who has an Extra class license is NOT
"oh-so-superior" to anyone...As a matter of fact, most of us have gone
to great lengths to help or accomodate those who are not Extras or have
any radio background.

Being condescending and mean to neophytes, well, that's a
LennieSchtick. Not one sentence of "Here, let me help you" rhetortic
has eminated from the keyboard of Leonard H. Anderson without also
including some mean, deceptive or otherwise deceitful insults with it.

It's just not in him to do.

Kim wrote:
> What IS up with any moves to change things up in amateur radio?

There have been about 18 proposals to FCC since July 2003, ranging from "just drop Element 1 and leave everything else alone" to much more involved stuff involving new license classes, etc. At least one group (NCVEC) has submitted *two* proposals.

FCC hasn't done a thing other than assign numbers to the proposals and collect comments.

It seems that the next step will be for FCC to put out an NPRM (Notice of Proposed Rule Making), combining what they think are the best features of the proposals, collect commentary on the NPRM, and then make a decision.

At first I thought FCC would just dump Element 1 when the treaty changed. Now I think we're at least a year, maybe two, from any changes.

Your original 2008 pool prediction may turn out to be the winner!
>
> What about BPL?

FCC put out a bunch of rules that are not as good as we'd like but not as bad as what the BPL folks wanted. ARRL keeps bugging FCC to reconsider, and both ARRL and other amateur groups raise cain whenever there's documented evidence of harmful interference.

There are a few BPL sites in operation. At least one test site shut down, and at least one locale that was considering BPL decided against it. Meanwhile, DSL-, Wi-Fi-, and cable-served areas continue to grow.

Here in Philly the mayor is pushing for the whole city to be Wi-Fi'ed, so everybody can be online boradband-style. Not a bad idea, really, if he can pull it off.

Only four people still in, I see (including one whose date has passed, but
we're less than half way to the next date).

I predict that Canada, Spain and Italy will all make the change before the
US (seems like most other countries already have).

> We're back to it Brian...last chance to suck it up and keep
things
> gentlemanly.....

Things are gentlemanly. If you wish to change the situation, it's on
you.

Best of Luck.

Poor Stebe. He fantasizes his opponents as all being wrong,
all lying, all unlawful.

> Otherwise tell us about your undocumented, illegal operation
from
> Somalia. It was OK, supposedly, becasue some butter bar gave you the

> nod, but your butter bar was not a representitive of the UN officers
> who were in charge at the time.

Obviously you weren't there, or you'd be able to make reference to 8
hostile actions. And I don't reall a single LT, butter bar or not. We

tend to deploy with our experienced people. I did see one reserve
Staff Sargeant, but that was about the lowest rank I saw. He wasn't in

the UN either.

Stebe has ultimate authority in ham radio. Everywhere.

If He says you be illegal, you are illegal. In his tunnel vision,
that is.

> After that you can get around to providing us the links that
> corroborate your "Unlicensed devices play a major role in emergency

> comms" assertion.

Go get a better quote.

Stebe hasn't done much "emergency comms" stuff, obviously.

But His imagination has! :-)

> Then you can provided us some sort of verification of your claim

> of having worked the equivilent of DXCC a couple times over.

Go get a quote for that one, too.

> Those are radio-related issues that you claim expertise,
> experience or otherwise are knowledgeable of.

> So far you've provided us absolutely nothing, and those are just

> the RADIO related issues.

My statements can stand on their own.

Doesn't matter whether or not anyone provides bona fide references
for Stebe. If'n he say you be wrong, you be wrong! :-)

> And if your nose isn't bruised and bloodied enough after that,
> there are some other issues I will be glad to regurgitate for NG
> consumption, but we'll wait and see if you decide to exercise some

"Bruised and bloody." Interesting choice of words. Are you doing some

kind of violence?

Stebe is Conan the Barbarian in here, master of wanting to do
violence.

> So...You up to getting your NG butt whupped again, or do you
just
> want to forget that you re-opened a can of worms that folks were just

> now starting to forget?

> Steve, K4YZ

Steve, I don't believe you've ever given anyone else a "butt whooping."

Perhaps in some fantasy kind of way.

Ackshully, Stebe said "whupped." Das a TN word which I think
means Stebe's imagination filled out his dream desire for gory
glory and the Prince of Barbarians, conquering all who stand in
his way!

Anyway, when are you going to tell us your 7 war stories?

I think those were "hostile actions." Stebe will say those are all "classified" or somesuch since he can't talk about them in public. :-)

It's the same way with his NOT talking about all those military radios he supposedly used while in the military. He's not mentioned but one and that is really an old commercial rig (which he probably saw briefly at some base MARS station). Stebe said (a long time ago) that all that radio information was "secret" or words to that effect, therefore he "couldn't talk about them in public." :-)

Never mind that nearly ALL of those military radios have been public knowledge for years, information available from many, many public sources. Geez, even before Stebe mumbled his "secret radio" thing, I'd given the link to Army Field Manual FM 24-24 that's been in public dissemination status since 1994. [24-24 is a directory of Signal Devices and similar links are available on various ham radio Internet sites.

Wait a minute. Maybe Soldier of Fortune magazine is going to publish this great war hero's story? In that case, there's prolly a Non-Disclosure Agreement mandating he can't talk about it!

Yeah, that's it. Stebe can't talk about it because of the NDA!

Wow. Funny Fiction time again! :-)

Probably.

> (seems like most other countries already have).

Really?

Do you have a list of how many countries still require code testing for
at least one class of amateur radio license, vs. those who have no code
testing?

It would be interesting to see the actual totals. Even better if the number of hams in those countries were included, and growth since the change vs. before the change.

Few index funds are "the market." The SP 500 sure isn't.

And even if you do buy index
> funds, you're investing in a particular index.

So your retirement fund that IS invested in the market won't be there
when you retire. Yeh, right.

I've never, ever, ever met anyone who said that you don't need
restraint when investing your life savings. Ever.

So, Jim Miccolis, name those people.

I knew a guy who quit a good job. He even had benefits and a
retirement plan. You can't make people stay in jobs they don't like
unless you first rename your country to "East Germany."

If you put the senate and house of reps in FERS and SS, they just might
behave more responsibly.

You can blame them or not, but if you make them participate in the
programs that they are screwing, you might like the results better.

Correct. Social engineering and attempts to force their philosophy on
others. Liberals.

Correct. That's a great way to lose power quickly. Unfortunately the
Pubs have a track record of doing just that. Too bad.

I was doing a little web searching myself re how many nations have
removed Morse testing. I didn't have a lot of luck.

My suspicions are that while a number of countries have indeed dropped
the test, "most" is not that accurate.

Certainly it is too soon to get an accurate count of Hams number
changing since dropping the test.

I'm firmly convinced that there are many more important factors in ARS
growth or recession than the Morse code test.

Nope. In facts.

Brian had no lawful permission to operate from Somalia. Period.

> > After that you can get around to providing us the links that
> > corroborate your "Unlicensed devices play a major role in emergency

> for Stebe. If'n he say you be wrong, you be wrong!

So far, there's been NO references.

From you OR him. The TRUTH is that unlicensed radio systems do
NOT play a "major role" in emergency communications.

> > And if your nose isn't bruised and bloodied enough after that,

> his way!

Nope.

Just a good old fashioned thrashing. The kind that pathological
liars and cheaters need from time to time. Too bad the law doesn't
allow it, but then again, you'd be doing your postings with a push
stick in your teeth, Lennie.

> Anyway, when are you going to tell us your 7 war stories?
>
> I think those were "hostile actions." Stebe will say those are
all
> "classified" or somesuch since he can't talk about them in

> "secret" or words to that effect, therefore he "couldn't talk
about
> them in public."

No, Lennie...The "I can't talk about it bbecasue it's an on-going
project" tht YOU cited due to your "working part time but retired from
regular hours" routine.

I never said anything about any systems I worked on being
classified or secret.

You're welcome to TRY and find the post wherein you think I did...

> Never mind that nearly ALL of those military radios have been
> public knowledge for years, information available from many,
> many public sources. Geez, even before Stebe mumbled his

>
> Wait a minute. Maybe Soldier of Fortune magazine is going to
> publish this great war hero's story? In that case, there's prolly
> a Non-Disclosure Agreement mandating he can't talk about it!
>
> Yeah, that's it. Stebe can't talk about it because of the NDA!

No, Lennie...The "I can't talk about it bbecasue it's an on-going
project" tht YOU cited due to your "working part time but retired from

regular hours" routine.

I never said anything about any systems I worked on being
classified or secret.

> Wow. Funny Fiction time again!

Oh...you are working up yet another "in comming artillery" story?
Or is this one going to be another Soviet aircraft being danger close?

Yes, Lennie...Someone in here likes to write fiction, but it isn't
me.

Here's an update on the old "when will FCC drop Element 1?" pool. Note how almost everyone's date, including mine, has already past:

WA2SI: September 13, 2003
KF6TPT: September 29, 2003
KC8EPO: December 31, 2003
K2UNK: January 1, 2004
K2ASP: March 15, 2004
AA2QA: April 1, 2004
N2EY: April 15, 2004
N3KIP: May 1, 2004
KC8PMX: July 1, 2004
WA2ISE: August 1, 2004
K3LT: September 15, 2004
WK3C: December 30, 2004
N4PGW:May 22, 2005
N8UZE: July 1, 2005
AB2RC: July 1, 2007
KB3EIA: July 5, 2007
W5TIT: June 1, 2008

Anybody want to add a prediction?

New "rolling rule" (thanks Dee, N8UZE): If your prediction is a year or more in the past, you can add a new one. At this point K2UNK and everyone before him can add a new prediction. All predictions stay on the list.

73 de Jim, N2EY

Message-ID: <BmbPd.9583$oO.5955@newsread2.news.atl.earthlink.net>
Source record: 102921

Just was starting to get interested in QRP. Been making many contacts with 1/2 watt on 7040 KHz. But lately it has been worthless due to all the QRM from RTTY stations operating very close to 7040. Why? Why are all the RTTY people meeting so close to 7040 when there is so much free space in around 7090 area?

Source record: 102922

Because 7040 kHz is the "RTTY DX" frequency in the ARRL bandplan.

http://www.arrl.org/FandES/field/regulations/bandplan.html#40m

Whoever designated 7040 kHz as a QRP frequency didn't look at the ARRL band plan.

Have heard suggestions to move the QRP Calling frequency to 7030 kHz -- but that probably has a lot of data stuff too
But suspect the QRP Amateur Radio Club International should do that URL:
http://www.qrparci.org/

Actually I thought 7040 was a QRP freq before RTTY ever came
around....could be wrong but thought 7040 was QRP for a LOOONG time...

RTTY ers don't usually read the QRP pages for frequency useage
They probably read the ARRL pages for this

It is a conflict and the two entities ought to straighten it out

Its to the point where the last few days even operating CW on 40 has been a waste. Twice tonight 20+ minutes into two different QSO's had RTTY coming right on top..... Guess they couldn't hear that the freq was already in use (ya right!)

In the "Olde Days" a person operating ANY Amateur mode on that
frequeny would have been proficient in Morse Code to at least 13WPM,
the speed at which one reaches true "literacy" in Morse. (Able to
understand what was being sent without having to write down everything
to get it)

Incursions like this will continue, expecially with the spectre of
a true no code Amateur license looming close.

Exactly...not to mention the fact that IMHO most of the RTTY contesters just
don't give a damn who they clobber.

Tonight is the CW Sprint. 40 will be a total wipe out. However I will have
my RTTY program loaded. And the tape running. One way or another they will
know who they stepped on.

Good News!

Do you know how simple it is to go to Heaven after this life has ended?

The good news is that God came from Heaven to earth in the person of Jesus Christ over 2000 years ago and died for our past, present and future sins(misdeeds). He was born in the land of Israel supernaturally to a virgin Jewish woman named Mary. He lived a sinless life for thirty-three years and then sacrificed His sinless blood and died on a cross to pay the death penalty for our sins.

After Jesus died He rose from the dead three days later as He said He would. The Holy Bible also tells us that Jesus Christ ascended into Heaven and that all who accept Him as their Lord and Saviour will live forever with Him in Heaven where there is no more death, sorrow, sickness and pain.

The Holy Bible very clearly explains how simple it is to be saved and on your way to Heaven, "For if you confess with your mouth, "Jesus is Lord," and believe in your heart that God raised him from the dead, you WILL BE SAVED." (Romans 10:9)

You can be saved right now and on your way to Heaven if you will open your heart to Jesus and pray the following prayer:

Dear Jesus Christ, I want to be saved so that I can have a home in Heaven when I die. I agree with You that I am a sinner. I believe You love me and want to save me. I believe that You bled and died on the cross to pay the penalty for my sins. I believe that You rose from the dead. Please forgive my sins and come into my heart and be my Lord and Saviour. Thank You Lord Jesus Christ for forgiving me and saving me through Your merciful grace. Amen.

You are now a Christian if you said the prayer and allowed
God to save you. Welcome to the family of God.

If you decide to wait till later you may die before you get
another chance to be saved because none of us knows
exactly when we will die.

Have a great day!

Thanks to hard work and efforts of the ARRL, new Ham's don't have to know CW anymore. So these RTTY OM's probably didn't know they were QRM'ing anyone. These new ARRL approved "CB'er type Ham's", are good at jamming and causing all sorts of problems on the bands just like you can hear on 11 meters.

The ARRL does have a plan to help solve conflicts like this to reduce future problems, but it hasn't been proposed to the FCC yet:

Anyone caught showing any sign of inteligence, using CW, or not acting like an all around dumb ass, should be fined and have their license revoked.

Thus it's not free, so there's no freeband.... :-)

Really, what can you do illegally on 27.567MHz that
you, if you have a General or Extra class ham license,
can do legally in the 10 meter ham band?

The RTTY people may not have the receiver audio playing in the
shack, but just looking at the computer monitor for decoded RTTY
messages. SO they may not realize that there's some code coming
in on freq. Changing band conditions and such.

Howdee Caveat,

That was an interesting article. I am more pro-CW than not but I
can't take the results of those surveys as being very accurate. They
were done by the ARRL on their website so it was limited to those who
visit the League site. Most of those visitors will be League members
(I am one) which consists heavily of contesters (occasionally I
contest, but not often.) So the survey only consists of internet
users that visit the ARRL site. There are very many rag-chewers that
may not visit the League's site or contest.

That being said, I don't believe CW is dead and like the article said,
I don't think code-free amateurs will be the death of Amateur Radio.
I have known many hams that only wanted to play with V/UHF and never
progressed past Tech for that reason. I also know many Amateur Extra
Class hams that used to play on HF that are now exclusively on V/Uhf
or satellite. It is all in the amateur's preference.

It isn't my intent to argue the code vs no code issue or to disagree
with the gist of the article. I am just voicing my opinion about the
accuracy of the survey results.

Thanks for the link. I was interesting reading.

The Death of Amateur Radio

By

Todd Daugherty N9OGL

I've been asked on the newsgroup rec.radio.amateur.policy
to back up my statements regarding the death of amateur radio and the FCC's suppression of free speech on the radio. Therefore, I've deiced to write this paper on the subject. Now, I know there are amateur radio operators who will not read this article or will write it off as the writes by some crack pot. But one must remember everyone has an opinion; this happens to be mine.

Amateur radio is slowing dying; now many amateurs would disagree with that statement however, this is a harsh reality. Now as I stated above I have been asked to "prove it" so that what I'm attending to do. Amateur radio is dying because it is unable to keep up with commercial services. On February of 2000 I participated in a discussion entitled "What the heck is Packet radio go for anyway" which was started by someone named "Inquisitor" anyway I pointed out that Packet Radio didn't have the variety as the internet. If packet was to grow packet would have to basically compete with the internet. One amateur radio operator Charles Brabham N5PVL made this statement in responds to mine:

N9OGL:" My point is Packet does not have the variety like the internet and when a person comes up with a new idea for packet or a new program idea for packet it is seemed to be frowned upon by other operators. So packet radio will remain in last place behind the Internet, and Wireless systems."

N5PVL: "I hate to be the one to break it to you, but Packet Radio is not a commercial communications network, and so does not "compete" with commercial communications networks in any way.

Packet is for Amateur Radio operators who enjoy digital communications *independent* of commercial communications networks and the Internet.

Of course it's different... It's supposed to be, for a number of reasons. If it offered exactly the same thing as the commercial nets, there would be no reason for it to exist at all.

Try thinking this stuff through, every once in a while."

N9OGL "Variety does not have to be a new idea or program but a BBS with it's own stuff in it and not some Forwarded stuff from other places have BBS systems for just for sale stuff and another BBS for Digital communication idea or
one with General Amateur radio stuff but leave all the for sale stuff in the

for sale BBS."

N5PVL "That's up to the individual BBS SYSOP. My BBS has offered a good variety of info above and beyond the daily bulletins for over a decade now... So what?"

N9OGL "Give the BBS a variety and its own individualism. Stuff on BBS doesn' t have to be just "For Sale" and jokes On Amateur radio you can talk about anything not just radio. But again you have Amateurs who don't want change whether it packet or anything in the Amateur radio service. So Packet will be like ancient modes of communication it will die out because those people will not accept changing the system"

N5PVL "Blah blah blah... Yah yah yah... Too lazy and stupid to do anything yourself, but you have plenty of energy at hand for the purpose of denigrating the efforts of others. Maybe you should just stick your head in the toilet...Flush twice! It's a long way to Washington D.C.!

--

73 DE Charles Brabham, N5PVL
N5PVL @ N5PVL.#NTX.TX.USA.NOAM
http://www.texoma.net/~n5pvl

Now the reason I bring this up is simply that this misguided amateur radio operator WAS trying to prove a point which he could not; simply for two reasons. The first is that most of the BBS systems on packet were on the forwarding system and the vast majority of messages on the BBS systems were all the same. Regardless to what Mr. Brabham said this was a harsh reality. What Mr. Brabham didn't realize was at the time of that post I had been running TWO BBS systems on packet. Most packet operators didn't want no "individuals" running a BBS system and not use the forwarding system. Today, here in Illinois packet radio is nothing more then a vast memory. All the Nodes and BBS systems are gone. Gone for two reasons the first is the BBS operators were running their forwarding system on the user frequency. The second reason is as I stated in my post that there was no variety and all amateur radio operators went to the internet. Packet Radio was a prelude of what will happen to amateur radio. Like N5PVL stated "I hate to be the one to break it to you, but Packet Radio is not a commercial communications network, and so does not "compete" with commercial communications networks in any way." This seems to be the attitude of all amateur radio operators when it comes to competing with other services. For amateur radio to survive they are going to have to compete with the internet or there will be no amateur radio in near future. As I stated on the newsgroup rec.radio.amateur.policy look at it this way. Go to streets of your town as ask the average person on the street if they had a choice between the Internet and Amateur radio which one would they pick? The vast majority of people would pick the internet. The reason is the internet provides a vast variety of information unlike amateur radio. People can talk via email, chat rooms, voice communication and other systems over the internet. With Internet 2 coming out the Internet with grow ever more. Why should someone take the time to get a license to talk to people all over the world via

radio when they can do it on the internet? For amateur radio to grow amateur radio operators are going to have to get out of this not competing attitude. One of the problems that helps propagate this no competing attitude is both the amateur and FCC's view on content control.

Section 326 of the Communication Act of 1934 prohibits the FCC for controlling the content of ANY radio station. This also applies to the amateur radio service. However, this seems NOT to be the case. When I announced on the newsgroup about my Information bulletin I received a post from Riley Hollingsworth the FCC chief enforcer of the amateur radio service. Telling me to let him know when I go on the air so he can send me a "QSL CARD". The QSL card he was of course talking about was a warning letter. This of course is not the first time Mr. Hollingsworth who works for the FCC tried to suppress Free Speech. One of the most known FCC free speech suppression cases is the Liberty Net. Here's an article from Newsline:

"FCC vs. The Liberty Net Riley Hollingsworth and the FCC are questioning if a controversial 75 meter SSB net really has any place on the ham bands. The group is called the Liberty Net. It operates nightly at 3.950 MHZ and is primarily an open discussion or right wing politics and conservative causes. But, in a May 7th letter to Victor Misek, W1WCR,Hollingsworth requests that the Hudson NewHampshire ham review the Basis and Purpose of Amateur Radio as outlined in Section 97.1 of the Commissions rules. He then tells Misek to explain to the Commission how the operation of the Liberty Net can be justified. But it's another Hollingsworth statement that draws the proverbial line in the sand between the FCC and the Liberty Net. Hollingsworth tells Misek - and we quote -- "We are unable to determine how transmissions of this group met the standards of, or contribute to the purpose of, the allocation of frequencies for the Amateur Radio Service." In other words, the FCC appears to be questioning whether the content of communications by those involved in the Liberty Net meet the minimum requisite requirements to be transmitted in the ham radio bands.And Hollingsworth goes even further. He suggests that the Liberty Net might want to consider moving to the Internet or wait to wait and see if the Commission creates a low power FM broadcast service. If it does, the net might then want to apply for a broadcasting license grant. (FCC)

The part one should look at is the part in which Hollingsworth stated that the Liberty Net should look at the internet or apply for a low power FM license. Apparently Mr. Hollingsworth never heard of Section 326. Now Mr. Hollingsworth isn't the only FCC official that has done this; in 1990 the FCC sent letters out to 19 Net and Bulletin stations on 20 meters and of course the ARRL a.k.a. The Amateur Radio Nazi Party deiced to stick their Gestapo free speech suppression nose in it. Stating in ARRL Letter and World Radio "The League maintains that the disputes can resolved by enforcing existing FCC regulations: One-way Broadcast, if they go beyond the accepted norms for such transmissions on the Amateur bands their illegal." So who's to say is the "ACCEPTED NORM"?? The ARRL, why not the FCC could give the ARRL the power and therefore Free speech could be suppressed. The first Amendment bars the government from stomping on free speech, but it doesn't apply to the ARRL which is a national organization from doing it. Who's the

one pushing to K1MAN off the air?? The ARRL and its members. I was asked on the newsgroup to prove how I'm being suppressed. Well, when you have a FCC official threaten you with a warning letter over your Information bulletin which hadn't even begun. Then the idea if suppression of Free Speech by a Federal agency is a primary example of my right to voice my opinion is being suppressed by the FCC.

Good grief! I got the Extra before incentive licensing created sub-bands, just so I didn't have to keep track of anything more than CW and phone bands. Now we have to worry about every bandplan mode allocation? Either the frequency is in use or not in use. (That's for everyone, except K1MAN of course.) If it's not in use, it's free game. For those who don't believe in first-come, first-serve - I have a big amplifier I can turn on as the minimal power needed to complete the contact. ak

p.s. OK - I do try to stay away from the low power PSK frequencies, if I'm not running PSK, and keep my power to under 200 watts in Novice sections and on 30 meters.

We definitely don't need another boy broadcaster. We have had to put up with K1MAN for far too long. Think back to the beginnings of ham radio. Everyone wanted to be a broadcaster, so off they went to the broadcast band, and the ham bands were saved for 2-way ham radio communications. No one cares about your opinion. If you insist upon expressing it, engage someone in a normal QSO. Is it that you don't want someone refuting your stupid ideas? Sure, let's get 100,000 hams broadcasting to no one all the time on every frequency. blah blah blah. Do something useful and volunteer at your local kindergarten and express your opinions there. Better yet, do something more useful than that and help the janitor clean the restrooms.

It is interesting that what you propose to do would hasten your "Death of Amateur Radio" in my opinion.

If we get a few hundred more such as yourself that believe that they need to broadcast their opinions over the amateur bands, more and more Amateurs will find something else to do with their leisure time, as they have no room to transmit as the bands fill up with "bulletin free speech transmissions. All the while transforming the Amateur bands into some sort of mutant version of the AM broadcast band.

You note that you look for a free space to transmit in. So what? K1MAN doesn't. He opens up on whoever is on the frequency and threatens those who don't move. How many more "free speech advocates" will decide that anyone on "their frequency" is an infringement on their free speech?

I wonder if wattage limits are an infringement on a persons free speech? Limiting it limits the number of people who can be reached.

Suggestion that Lib net members use an alternative method of getting their views out is not infringement of their free speech, it is a suggestion. And not a bad one at that. No one is forcing them off the air, just suggesting a better venue for their views.

Death of Amateur Radio? Perhaps you have a bigger part than you realize.....

Nothing wrong. Just not appropriate to this forum. And I didn't
"shoot my mouth off", Brian.

Now...back to those T5/KH/HL logs and the DXCC several times over
comments YOU made. Those ARE germane to Amateur Radio even though it's
apparent you can't seem to get your "facts" right.

No where in my paper do I state that amateurs should broadcasting. There are some including the FCC who wishes to keep the service to where all you do is give a signal report, location, ect. As I stated in my paper a good example of this was packet radio. Packet is pretty much died around here because all of the content on them was "For Sale" stuff. Packet would of survive if BBS's were set up to cater to certain topics or discussion groups.

The FCC shouldn't even suggest it. Again the FCC is barred from controlling the content of any station. Again if they can have alternative perhaps ALL amateurs should move off the radio spectrum and uses the alternative....the

Internet.

You have some facts to back up that dumb statement? Have some official
quotes from the FCC?

Actually, packet BBS messages would be a better method. It's
store and forward, and won't clog HF. Anyone (on packet and
any gateways to the 'net) can read your messages if they so
choose. Just no pecuniary interest and no dirty words.

It seems that SOME amateur radio operators misunderstood my original post. Somehow this crap about information bulletins and broadcast came up. This paper had NOTHING to do with Information Bulletins, K1MAN or Broadcasting. The main theme of that paper is that if Amateur Radio doesn't change the service will die.

Amateur radio operators, The ARRL, and The FCC think that certain things shouldn't air. This can be proven by the FCC action against the Liberty Net, The FCC actions against 19 NETS and BBS back in 1990 as well as cases of the FCC going after people over content back in the 80's. As well as the death of packet radio. The death of Packet radio was just a prelude of things to come. Amateur's who can't see the facts are blind by their own stupidity.

Amateur radio is going to die, regardless to what anyone think. The reason amateur radio is going to die is because Amateur radio has nothing to offer. The FCC can change the system to where all a person has to do is apply for a license and pay a fee but THAT will not save ham radio unless amateur radio has something to offer. The point of this paper is that amateur operators are going to have to get their heads out of their asses and realize they are going to have to compete against the other service like the internet. If amateur radio is to survive they are going to have to compete. To do that amateur radio is going to have to get rid of some of this idea's regarding different things. As I stated before Packet radio died because of that. People used packet for a long time but like all thing the novelty of it wore off. The reason was packet radio didn't have anything more to offer so people got rid of their TNC's and went to do something else. The same is happening to amateur radio as a whole. The vast majority of stuff amateurs can do is now capable through other services like the internet. Amateur radio is going to have to come up new stuff to offer people to get them into the service.

Well, Todd, I've read the entire thing and I've not written it off "as
the writes by some crack pot". I've written it off "as the writes by
some" special crackpot.

> But one must remember everyone has an opinion; this happens to be mine.

...and you aren't one to allow reality to stand in your way.

Many radio amateurs would disagree with your statement because it has no
basis in fact. Now THAT is harsh reality.

> Now as I stated above I
> have been asked to "prove it" so that what I'm attending to do. Amateur
> radio is dying because it is unable to keep up with commercial services.

Amateur radio isn't a commercial service and isn't in competition with
commercial services. It has no reason to "keep up".

> On

Packet radio is not the internet. It has no reason to become like the
internet.

> For amateur radio to survive
> they are going to have to compete with the internet or there will be no
> amateur radio in near future.

Sure, Todd--and amateur astronomy is going to have to compete with
roller blading or there will be no amateur astronomy in the future.

> As I stated on the newsgroup

> Internet 2 coming out the Internet with grow ever more.

Ask the average man on the street to choose between the stamp collecting
and the internet and he'll likely choose the internet. He knows more
about the internet and stamp collecting has no provision for downloading
pirated music or pornography.

Amateur radio has variety of information unlike the internet. People
can talk via their voices, via morse, via keyboard modes, via
television. The two are not the same thing. That's why I'm introducing
Amateur Radio II, aka Amateur Radio Lite. It'll be like amateur radio
but without all of the icky stuff like "RF", "IF", fomulae and morse
code. It'll draw those folks who are "otherwise qualified" and mildly
interested.

> Why should someone
> take the time to get a license to talk to people all over the world via

> amateur radio service. However, this seems NOT to be the case.

You've been given free advice from a professional in the field. You've
chosen to ignore the advice because it conflicts with your rather
uneducated view of the regulations.

> When I
> announced on the newsgroup about my Information bulletin I received a post

> suppressed by the FCC.

You were repeatedly asked which things you were being prevented from
saying over the air via amateur radio. You never bothered to reply.
You've provided the FCC enough ammunition through your public statements
here, to nail your hide to the barn door if you decide that you want to
play boy broadcaster.

More correctly, most amateur radio operators, the ARRL, the FCC and most
of the public think that certain things shouldn't air. Your choice: To
air or to err.

> Amateur's who can't see the facts are blind by their own
> stupidity.

People who can't spell or construct a sentence should be wary of calling
others "stupid".

> Amateur radio is going to die, regardless to what anyone think.

That's your rant and you're sticking with it, despite what the facts
say.

> The
> reason amateur radio is going to die is because Amateur radio has nothing to

I find it difficult to carry on a discussion with one who feels that
because his cranium is inserted into his rectum, everyone else is in the
same fix.

Every few months, some boy genius like you shows up in one of the
amateur radio newsgroups like a shooting star, only to burn up on enty
into Earth's atmosphere.

??

The folks who want restraints on stem cell research, recreational
chemicals (except tobacco and alchohol), contraception, etc., call
themselves "conservatives".

The plain and simple fact is that any government action is "social
engineering and attempt[ing] to force their philosophy on others". By
definition.

For example, there are tax deductions for home mortgage interest. Such
deductions make home ownership more affordable for millions of people,
and are in effect a subsidy supporting home ownership vs. renting.

> Pubs have a track record of doing just that. Too bad.

But they didn't lose power in 2004. Nor in 1984 or 1988.

The same folks who criticized others for "tax and spend" are now
deep into "borrow and spend".

Seems to me that it's more responsible to pay-as-you-go than to
borrow and let future generations pay for it.

> >>If all the Pubs can do is continue to blame the Dems for

It's also interesting to note that some people are insulted if you
call them "liberals", even though their behavior and viewpoints
are exactly that. And some people claim the title "conservative"
yet behave in a very different way.

Some kind of RTTY contest going on.

Remember too that 40 meters is only 7000-7100 outside of IARU Region 2.

That will change in the next few years but right now a lot of DX is
allowed above 7100. And as we head towards sunspot minimum, folks who
were spread all over the bands above 10 MHz are being pushed lower in
frequency due to lack of propagation. Happens every cycle.

The best solution would be for the bottom 50-75 kc\Hz of each band to
be
made CW-only - by law.

For more than 50 years, some hams have been yelling "Ham Radio is Dying!" "Ham Radio is Dying!" They came up with all kinds of bright ideas. Incentive licensing...school clubs...extra-easy study guides...dumbing down the licensing tests...no code licenses...on and on. Why do some hams believe ham radio is dying? They are bored with the hobby themselves! They put together some equipment, strung up antennas, exchanged signal and weather reports, chased certificates, collected QSL cards and after a few years or more of this they ask: "Is this all there is?" Bah Humbug...yup that's about all it is. So what? What more do you want it to be?

Instead of predicting "The Death Of Amateur Radio" and hashing over useless statistics --
How about we promote Amateur Radio and mentor new folks?
How many doom sayers here help the hobby with training, elmering, and emergency services ?
In Southern Calif -- we have three classes running at elementary and high schools, lots of Emergency training as well.

I can tell you that Amateur Radio was highly valuable and praised during the Southern Calif fires a few years back -- despite the generalization below of "boring stuff".
Its only boring if you are a bore.

Well lets see if these Ham Radio QSO's that I have had -- would be of interest to you:
1. A QSO with a Navy dirigible crew member -- flew in the 1930's airships.
2. A QSO with an archeologist in the Central America -- just discovered new ruins.
3. A WWII Luftwaffe pilot - flew a ME-109
4. QSO with a Swedish Ham -- we talked about Soloman Andre's balloon flight to the North pole -- in 1897
5. A QSO with a British soldier in the Falklands -- we talked about Shackletons ordeal in 1908 and the Falkland war
6. An anthropologist in New Guinea -- we talked about a tribe there that was virtually in the stone age
7. A missionary in the Amazon -- we talked about the tribe he was helping
8. A chap in Australia that was in the outback studying the aborigines
9. A Russian officer in an arctic weather station --- brrr -- we talked about the incredible working conditions there

Lots more "boring stuff"

If the above is of no interest to you I suggest you have very limited interests.

compete with
> the internet.

Why?

The internet is pretty much ubiquitous in the USA and other developed countries, if you live where there is reliable telephone service. Broadband access is expanding rapidly and so is mobile access. There's no way hams can match the infrastructure of any internet provider.

> One amateur radio operator Charles Brabham N5PVL made this

> second reason is as I stated in my post that there was no variety and
all
> amateur radio operators went to the internet.

Which proves the point about competition.

> Packet Radio was a prelude of
> what will happen to amateur radio. Like N5PVL stated "I hate to be
the one
> to break it to you, but Packet Radio is not a commercial
communications
> network, and so does not "compete" with commercial communications
networks
> in any way." This seems to be the attitude of all amateur radio
operators
> when it comes to competing with other services.

Because it's true. Amateur radio, or *any* radio service, can only
survive by offering what other services cannot.

I remember a time, perhaps 20 years ago, when a good number of new hams
got their licenses for "honeydo" purposes. Today the same
communications needs are handled by cell phone. Some of those hams are
gone, others discovered that ham radio is more than the reason they
were originally licensed.

> For amateur radio to survive
> they are going to have to compete with the internet or there will be
no
> amateur radio in near future.

Why? I'm both on the air and online. Each medium offers things the
other does not.

> Go to streets of your town as
> ask the average person on the street if they had a choice between the
> Internet and Amateur radio which one would they pick? The vast
majority of

> people would pick the internet.

Of course. Think about *why*.

Also - why must it be one or the other? Why not both?

> The reason is the internet provides a vast
> variety of information unlike amateur radio. People can talk via
email, chat
> rooms, voice communication and other systems over the internet. With
> Internet 2 coming out the Internet with grow ever more.

That's one reason. Here are some more:

1) Most people already know about the internet and what it can do. Many
people do not know amateur radio exists, or have only a vague idea of
what it is.

2) Most people access the internet via a personal computer or a
wireless-enabled PDA-type device like a Blackberry. Those devices have
uses far beyond those of internet access.

3) No license. No antenna. Worldwide access 24/7.

> Why should someone
> take the time to get a license to talk to people all over the world
via
> radio when they can do it on the internet?

Because it's different. And only because it's different.

> For amateur radio to grow amateur
> radio operators are going to have to get out of this not competing
attitude.

Why?

> One of the problems that helps propagate this no competing attitude
is both
> the amateur and FCC's view on content control.
>
> Section 326 of the Communication Act of 1934 prohibits the FCC
for
> controlling the content of ANY radio station. This also applies to
the
> amateur radio service.

Where, exactly, does it prohibit the FCC from controlling content? If
so,
why does Howard Stern have such problems? Why was there such a flap
about
Janet Jackson's "wardrobe malfunction"?

The various courts have repeatedly ruled that content control *is* part
of

FCC's authority. The arguments today are over where the line is, not whether
FCC can draw a line.

> However, this seems NOT to be the case. When I
> announced on the newsgroup about my Information bulletin I received a post

> "QSL CARD". The QSL card he was of course talking about was a warning
> letter.

That was nice of him. He could have just let you break the rules and then
started an enforcement proceeding.

> This of course is not the first time Mr. Hollingsworth who works for
> the FCC tried to suppress Free Speech.

Sorry, unlimited free speech protection does not extend to the radio spectrum.

> One of the most known FCC free speech
> suppression cases is the Liberty Net. Here's an article from Newsline:
>
> "FCC vs. The Liberty Net Riley Hollingsworth and the FCC are questioning if

the
> Commission creates a low power FM broadcast service. If it does, the
net
> might then want to apply for a broadcasting license grant. (FCC)

How is he wrong? I can't do routine business communications on the
ham bands, either.

> The part one should look at is the part in which Hollingsworth stated
that
> the Liberty Net should look at the internet or apply for a low power
FM
> license. Apparently Mr. Hollingsworth never heard of Section 326.

I think he knows more about it than you do, Todd.

> Now Mr.
> Hollingsworth isn't the only FCC official that has done this; in 1990
the
> FCC sent letters out to 19 Net and Bulletin stations on 20 meters and
of
> course the ARRL a.k.a. The Amateur Radio Nazi Party deiced to stick
their
> Gestapo free speech suppression nose in it.

Ding! Godwin's Law violated. You lose, Todd.

> Stating in ARRL Letter and World
> Radio "The League maintains that the disputes can resolved by
enforcing
> existing FCC regulations: One-way Broadcast, if they go beyond the
accepted
> norms for such transmissions on the Amateur bands their illegal." So
who's
> to say is the "ACCEPTED NORM"??

FCC, of course. And the accepted norm is pretty well-defined for
one-way transmissions:

1) Non-commercial in nature (ever notice how ARRL doesn't use W1AW to
solicit memberships or publication sales?)

2) Of *specific* interest to the *amateur radio* community

3) On a published schedule of transmissions (so everybody has a chance
to know where and when)

Would your transmissions meet all of those criteria?

> The ARRL, why not the FCC could give the
> ARRL the power and therefore Free speech could be suppressed.

What is it that you want to say?

> The first
> Amendment bars the government from stomping on free speech, but it
doesn't
> apply to the ARRL which is a national organization from doing it.
Who's the
> one pushing to K1MAN off the air?? The ARRL and its members.

Nope. It's FCC.

> I was asked on
> the newsgroup to prove how I'm being suppressed. Well, when you have
a FCC
> official threaten you with a warning letter over your Information
bulletin
> which hadn't even begun. Then the idea if suppression of Free Speech
by a
> Federal agency is a primary example of my right to voice my opinion
is being
> suppressed by the FCC.

What is it that you want to say in your bulletin, Todd? How does it
meet the criteria listed above?

Packet was/is so incredibly slow compared to other digital
transmissions. When I became a Ham, I looked at it and decided that at
it's transmission speed, there wasn't a lot of use for it.

>
>>You note that you look for a free space to transmit in. So what? K1MAN

>
> The FCC shouldn't even suggest it.

Hollingsworth has often commented on situations that are detrimental to
Ham radio. Certainly the Lib Net is one of those. A parent listening in
on that bunch is not likely to want their children having anything to do
with the hobby.

> Again the FCC is barred from controlling
> the content of any station. Again if they can have alternative perhaps ALL
> amateurs should move off the radio spectrum and uses the alternative....the

Why the one extreme or the other outlook? Suggesting that people make
the Ham bands a pleasant place to operate doesn't make for elimination
of free speech.

sensitive.

Poor Stebe. Thought he could get away with some bragging. :-)

"Sensitive info." That's terminology of the DoD in regards
to information that is not discussed in public. So...it is "okay"
to mention some vague generalities of claimed military
experience but the "details are sensitive!" :-)

>> > > > > In other words, no hostile actions.
>>
>> > > > In other words, you're wrong.

Tsk, tsk. "In other words," Stebe was just plain LYING. :-)

>> > > Steve, you're right as always. ""People who make up stories
about

>> > > names of places and dates when those bits of information can be
>> > > corroborated." - Steve Robeson"
>>
>> > We're back to it Brian...last chance to suck it up and keep
things
>> > gentlemanly.....

Tsk, tsk. Things "suck" on agreeing with Steve. :-)

>> Poor Stebe. He fantasizes his opponents as all being wrong,
> all lying, all unlawful.

>Somethings wrong with that guy. But I'd still like to hear his 7
>adventure stories. Maybe over beers at the American Legion.
>
>I wonder why he ever shot off his mouth about "seven hostile actions"
>if he is so adamant about not talking about it?

Well, Brian, you and me and everyone else reading in here know
that Stebe left the safety off and shot out that brag statement. He
can't admit to being wrong (ever) for fear of losing his self esteem
(in his own eyes) so he keeps pressing and pressing and pressing
on his alleged "rightness" of that claim.

If and only if those "seven hostile actions" were really
"sensitive,"
then he should NOT have admitted any such thing under the DoD
information release guidelines. Just admitting he "took part" in
some
"sensitive" activity is a direct violation of policy.

In all probability, he never took part in any "sensitive" hostile
actions
that he "cannot talk about." He is just making up stories. LYING.

In his latest reply to the quoted above exchanges, he tries to
misdirect
the thread into his charges of your "unlawful operation" on amateur
bands while serving in the USAF in a foreign country. Stebe has NO
authority of any kind to "charge" you with anything in that regard.
If
he had, then he should have contacted the Judge Advocate General
office of the USAF and lodged a formal complaint...which would be
ridiculous since he has NO evidence of any wrongdoing by you. He
did not. Had he done so, he would have been laughed at (a terrible
no-no to him).

But, "face" is everything to him, it seems. He must keep up his
ruff and tuff behavior to prove he is "superior" and therefore will
never
ever admit to wrongdoing of HIS claims. It is always the OTHER
person who "did wrong." :-)

In one way, it is quite funny that he keeps on trying to claim such
"hostile action" experience without any evidence of his
participation.
It gets more hilarious when he says (in another posting) that "it
has
nothing to do with amateur radio!" Tsk, tsk, if it has nothing to
do
with amateur radio, why does he keep posting on that in here? :-)

He ought to just "suck it up" and forget about it. :-)

Well, back to "amateur radio subjects" about discussions of national
economy, national politics, and retirement plans. A valid amateur
radio license must be held to access the newsgroup? :-)

The ham Chat Room is picking up steam...

"amateurs should broadcasting"?

> There are
> some including the FCC who wishes to keep the service to where all
you do is
> give a signal report, location, ect.

That's simply not true! I've had many long and enjoyable QSOs on a
variety of subjects, with never a problem on content from FCC. The only
limits on content
were "no pecuniary interest" and keeping it "G-rated".

> As I stated in my paper a good example

Yes, they should, if they see the content and behavior as detrimental
to the ARS. Which they do.

> Again the FCC is barred from controlling
> the content of any station.

That's simply not true.

> Again if they can have alternative perhaps ALL
> amateurs should move off the radio spectrum and uses the
alternative....the

Interesting!

In fact, we're starting to see what may be the "death of the internet" - or at least the death of its potential. Viruses, popups, identity theft and other shenanigans are causing many people I know to become disenchanted with it.

A BBS with discussion on antenna designing, Another BBS with discussion on
on experimenting. Another BBS with amaeur policy. These are just to name a
few there was a issue CQ VHF that went into greater detail about the set up.
The point is to have all the for sale stuff on one BBS and a diverse of
other BBS on other
subjects. I tried years ago to set something up like that however a few
local amateurs threated to go to the FCC and claim that the system is
interferning with their system.

The problem is however, that there are amateur radio operators who feel that
information bulletins which deal with amateur radio issues shouldn't be
opinionated and it is those same amateurs operators when the bulletin is
transmitting then begin jamming the Information bulletin because they feel
the transmission is illegal.

yes and no Under Section 326 of the Communication Act the FCC is barred to control the content of any station. The only content the FCC is allowed to control is obscene and indecent material and that's it.

I really dout the internet will die. As a matter of fact Internet 2 is now out (well right now only some Universities (206 to be exact) and government agencies have it...it will probably be commercialized in about two to three years.). Internet 2 will have a lot more applications and downloading will be faster. (people will be able to download a full length movie within minutes instead of days) so I really dout the Internet will die anytime soon.

My amateur operation in Somalia is none of your concern.

1. you weren't there.
2. you were not my commanding officer.
3. the United Nations was not in my chain of cammand.
4. you are not in my logs.
5. you weren't even a bystander.

Apparently, Somalia is one hostile action that you missed out on. Best
of luck next time.

> experience but the "details are sensitive!" :-)

He forgot the golden rule of story telling.

A fairy tale starts out, "Once upon a time..."

A war story starts out, "This is no shit..."

He should have started out with the "Once upon a time..." version.
Maybe the gloved one will offer him a respite at never-never land.

> >> > > > > In other words, no hostile actions.
> >>
> >> > > > In other words, you're wrong.
>
> Tsk, tsk. "In other words," Stebe was just plain LYING. :-)

Could be. Probably. Who knows? Probably not even Steve.

Maybe he's referring to being fitted for a white dinner jacket. Seven
times.

> >> > > Steve, you're right as always. ""People who make up stories

Yup, they call themselves conservatives. But in the brave new "you are
with us, or you are agin' us". party, conservatives support spending
money at unprecedented burn rates that are not supported by intake, they
support major increases in government power, and other things that we
used to be told that liberals want to inflict on us.

Lots of true conservatives feel the same. A web search can turn them up.

Absolutely. All deficit spending is eventually paid for. Under
extraordinary conditions, deficit spending *may* be the only way to
survive. But under those conditions, people are usually required to ante
up their share of the money to help. Today, people don't want to help
with their share of funding.

Indeed. Didya ever ever notice how angry some folk get when confronted
with the truth?

I still hold to the left to right spectrum as a continuum, not a bar.
It is a circle, with extreme left and right being virtually
indistinguishable from each other.

Deviation too far from the center is bad, bad, bad. The key is the center.

But learning is soooo hard. Witness the new Democratic party chairman. What were they thinking??? Dr. Dean is an honorable person. But he is just too far to the left for my taste.

I fail to see what the content of your erstwhile BBS had to do with
interference, which is a spectrum-sharing problem.

As all experienced lawyers know all too well, folks threaten to go to
"the authorities" or to "file suit" with no basis in their claim
whatsoever. Ah, the American legal system!!

The FCC doesn't want to end up doing this sort of micro-
management. It's better if hams decide (via ARRL or such
group) what subbands are where. And if something needs to
change it doesn't take years to do it. The FCC acknowledges
such as "good amateur practice".

When packet first came out, it was fun to do. That's when
dial up modems did 1200 baud. But that was 15 years ago.
If the packet BBSes now did 56K or faster (not by modulation
of the audio feeding an FM rig, but skillful modulation of
the carrier itself (an RF modem)) it might still be interesting.

>
>> Again the FCC is barred from controlling
>> the content of any station.

They have the "no pecuniary interest" rule, which is a
regulation on content. Not that I think that that rule is
bad; it protects the ham bands from being taken over
by taxi cab and pizza delivery traffic and such.

But somehow it doesn't have 1st amendment issues.

I refused the lobotomy.

> 3. the United Nations was not in my chain of cammand.

What's a "cammand"...??? "A" and "O" aren't even close enough on
the keyboard to be a "typo". Guess you have that Lenniesque "It's A
Typo So He Must be Angry" thing going on.

Are you angry, Brain? You have a right to be, you know...

You keep making stupid assertions in a public forum and then
getting your nose rubbed in them. I'd get angry if I kept getting
tripped up in my own mistakes.

If you'd STOP making those stupid assertions, the rubbing would
stop...Just like it has for the last four weeks.

The US Forces were in Somalia as part of a United Nations mandate.
That put them in charge. Like it or not, they WERE a part of your
"chain-of-command".

> 4. you are not in my logs.

How can I be in something that doesn't exist?

Somehow the vision of you sitting in a tub of Mr Bubble pushing a toy tugboat around going "toot toot" seems to fit. Why am I not surprised?

How did he "blow it"...?!?!

He made a suggestion...Not a statement of fact.

The FACT is that despite similarities of various narrow band
modes, many just don't work well in close proximity to each other.
Mode specific subbands would tend to reduce those occurences of
dissimilar mode QRM.

Forgot to add:

This is not a prctical option, though. What is an "adequate"
amount of bandwidth for a mode today will, undoubtedly be way too much
or way to little tomorrow.

Skilled operators observing "Gentleman's Band Plans" remains the
prefered methodology for this.

The Lib Net are a bunch of aging lightweight crackerheads compared
to something called The Eastern Regional Patriot Net.
You can catch these ultra-goofballs right now, every evening at
7:00 PM Central Time (8 PM Eastern) on 3.860 LSB.
This bunch is your genuine core-group of ultra-paranoid misfits
what seems to believes in chemtrails, colloidal-silver, the Protocols of
Zion, Planet X and Aryan purity among other such longtime short-wave
radio crapola, what everyone else knows is both pure bullshit and
the rantings of screwballs. The ERPN itself was started by noneother
than famous UPR Radio goofball Steve Anderson (..currently incarcerated
for firing a fully automatic AK-47 at a Kentucky State Police
officer during a MVA stop) who once broadcast from his home in
Northern Kentucky. Steve's eventual arrest and conviction has
not stopped these fruits and nuts which still meet nightly on 3.860 for
passing of Militia-related "traffic" on a nightly basis, some check-in's
of which have included known Militia members and several others
using both bootleg or invalid made-up ham callsigns. Of late however
check-in's to the ERPN have been sparse or made up of valid ham
radio callsign holders, as the word was out that both RH and a certain
"Homeland Security" type Agency of the US Govt. (hint) has taken recent
'interest' in some of the traffic being passed on this so-called net, or so
it was alleged at a midwestern ham club recently.....

Then again, that's is the consistent & nice thing about your average
right-wing Domestic Kookinschlong...every one of em LOVES to blabber
their openly Seditious and Insurrectionist incitement either thru a
telephone
to a kook call-in short-wave radio show, (..like Alex Jones' daily hit
parade
of paranoia) or from behind a ham radio microphone live and nightly like
they've been doing on the ERPN for several years now. What a bunch
of sloop head dopes, poebuckers and moe-rons! SWL them now boys while
you can, before they operate "dx" later at Guatananamo Bay or some
other similar 'amusing' place. ;)

Sounds good in theory. But in practice, how would that work? Could hams
all over the world, or even all over the USA, access that particular
BBS? If so, how?

> I tried years ago to set something up like that however a few
> local amateurs threated to go to the FCC and claim that the system is
> interferning with their system.

How many years ago? And would it have interfered?

It seems to me that one of the limitations of amateur packet radio is
that
it hasn't evolved much past the 1200 baud/BBS mindset of 20+ years ago.
Heck,
even trailingedge computer types like me have been running 56k dialup
modems for almost a decade!

Wasn't amateur packet originally set up for 1200 baud because you could
use a
voice FM 2 m radio without any mods? You'd think that by now packet
would have
moved to much higher speeds and much higher bands...but that would mean
someone
would actually have to build a radio to do it...

How about commercial content on the ham bands?

How about using radio to help with the commission of crimes?

Are those things allowed under 326?

If "internet 2" catches on, it will replace the original.

If you want different content than what is found on current amateur
packet,
why not provide it yourself? Not in competition with the forsale folks,
but
on a different frequency or even band. With much higher speed and more
features?

> Someone wrote;
> Q codes are for morse only. People who use Q codes on voice or text are
> boring.

I agree that generally there is no reason to use Q-codes on voice.

But there are 600,000 + hams in the USA most using Q-Codes on voice even VHF, and ya ain't gonna change that, so I suggest you know the basic ones when they come at you.

Example: New folks coming on repeaters will hear about 5 or 6 commonly used Q-codes - best learn them or wonder what the hell they are talking about. QSL, QSY, QTH, QRM, QRN, QRX, etc

Q-Signals are brevity codes as is the 10 codes. They are useful to increase thruput and clarity, that is why the police and RACES use them on voice. With Hams it is mostly jargon and tradition. Just like the rest of our language -- if ya get my drift - OK.

You will have an impossible task trying to eliminate Q-signals on Ham radio voice modes --- QSL ?

P.S. Do you still say DMV instead of Department Of Motor Vehicles ------

> used to be told that liberals want to inflict on us.

Except that the "liberals" were pushing tax-and-spend, not
borrow-and-spend.

>Lots of true conservatives feel the same.

But what is a "true conservative"? Or a "true liberal", for that
matter?

Most definitions I see are way too simplified.

For example, I've seen it written that a conservative wants to
control/regulate the individual and decontrol/deregulate the
organizations (govt., business, etc.), and a liberal wants to
control/regulate the organizations and decontrol/deregulate the
individual.

Under that definition, the current administration is conservative!

But another definition says the conservative wants small, hands-off,
pay-as-you-go government (usually defined by spending), and the liberal
wants big, hands-on, borrow-tax-spend activist/social engineering
government.

Under *that* definition, the current administration is liberal!

Yet another definition says conservatives want to keep things as they
are, and liberals want to run around changing things.

You decide what that one is.

> > >A web search can turn them up.

> extraordinary conditions, deficit spending *may* be the only way to
> survive. But under those conditions, people are usually required to ante
> up their share of the money to help. Today, people don't want to help

> with their share of funding.

I think they would *if* they felt they were getting something for their money.

Look at what happened during WW2. Government deficit spending went to unimagined levels. It was largely paid for by people buying bonds and paying higher taxes. (Bonds are, of course, deficit spending). Of course if that war was lost, financial policy didn't matter much.

But there was another side: Unemployment vanished! Production soared to incredible levels, and nobody had to worry about losing money if they could do the job. There wasn't much for civilians to spend their money on, because a lot of things were either rationed or unavailable. Buying bonds wasn't just a duty, it was also a form of tax-deferred saving.

And there were paybacks after the war ended. Unlike the way WW1 vets were treated during the Great Depression, WW2 produced the GI Bill, which revolutionized the middle class in the USA. Agencies like the FHA and projects like the interstate highway system not only created jobs, they completely changed the way people lived. Not just veterans, either.

Now - were the GI Bill and all those postwar agencies "liberal" or "conservative"?

> What were they thinking??? Dr. Dean is an honorable person. But he
is
> just too far to the left for my taste.
>
No, he's just what the Dems need. Here's why:

1) By making him chairman, they pretty much guarantee he won't run for
P or VP in 2008, yet his followers will stay around.

2) He's *not* an inside-the-beltway politician. That's important -
notice how many presidents since LBJ have come from state governor
positions. He's enough of an outsider to shake/wake the Dems up.

3) He's outspoken enough to talk straight and short, rather than "using
too many big words" like Algore and Kerry and Dukakis.

4) He *is* an honorable person, and a smart one. You may not agree with him, but you can respect him.

Is the state that elected Dean composed mostly of "liberals" or "conservatives"?

There are many ham radio operators who misunderstand this paper so I'll give a little example. Say I run a store, and in this store is empty boxes for sale. Now often I would get someone to come into my store but no one would buy my boxes. The reason for that is all I offer..the boxes. Now if I had a variety of stuff to offer the business would pickup and I would be able to compete with other stores. The same is true with amateur radio. If amateur radio is to survive in the digital age outdated modes of communication won't cut it. For amateur radio to survive they are going to have to offer something besides an easy way to get a license. Amateurs will have to compete in the sense that they are going to have to offer something that would get people to join the service. Like I said for amateurs to compete in the digital era out dated modes of communication and half ass forms of communication aren't going to cut. Amateur radio will die because amateur radio will have nothing to offer except those half ass modes and outdated communications

These are the numbers of current, unexpired amateur licenses held by
individuals on the stated dates:

As of May 14, 2000:

Novice - 49,329
Technician - 205,394
Technician Plus - 128,860
General - 112,677
Advanced - 99,782
Extra - 78,750

Total Tech/TechPlus - 334,254

Total all classes - 674,792

As of February 14, 2005:

Novice - 29,318 (decrease of 20,011)
Technician - 266,128 (increase of 60,734)
Technician Plus - 52,556 (decrease of 76,304)
General - 137,606 (increase of 24,929)
Advanced - 77,351 (decrease of 22,431)
Extra - 106,192 (increase of 27,442)

Total Tech/TechPlus - 318,684 (decrease of 15,570)

Total all classes - 669,151 (decrease of 5,641)

Note that these totals do not include licenses that
have expired but are in the grace period. They also
do not include club, military, RACES or other
station-only licenses.

Hmmm I read something like this in about 1950
Hasn't happened yet in fact increased enormously
Please give a date for the The Death of Amateur Radio
And we will take a dollar for every year it continues --- OK

Interesting that we have dozens of new hams that got a license to beat the
cell phone rates

I don't use Q-codes on voice.

But it's a good idea to know them anyway.
>
> Example: New folks coming on repeaters will hear about 5 or 6
commonly used
> Q-codes - best learn them or wonder what the hell they are talking

> Q-Signals are brevity codes as is the 10 codes. They are useful to
increase
> thruput and clarity, that is why the police and RACES use them on
voice.

Except in may cases they are *longer* on voice than the equivalent
words. For example, "QSL" is three syllables but "roger" is only two.
"QRX" is three but "wait" is one. Etc.

> With Hams it is mostly jargon and tradition. Just like the rest of
our

Exactly. I don't use 'em on voice but I'm not going to get upset with
someone who does.
>
> You will have an impossible task trying to eliminate Q-signals on Ham
radio
> voice modes --- QSL ?

roger!

The best way to eliminate their use on voice is simply to set an example. What a concept, huh?

> Now - were the GI Bill and all those postwar agencies "liberal" or
> "conservative"?

Extremely liberal.

I think you may be leading toward the point that many of the benefits
of modern America may be directly tied to a form of government that is
being dismantled. The liberal approach came after experiments in almost
pure capitalism, with it's boom and bust economies, and with the natural
accumulation of power to just a few of the most aggressive.

If you are, you are correct. Both sides have great ideas. Of course,
I'd think that, cuz I'm just about dead-center. Of course, I think both
sides have ideas that are suicidally stupid too! 8^)

>
> But how is the center defined?

Personally I define it as viewing of Government as a good and necessary
thing, with government control of those things that national government
does best, and delegation of the things that state and local governments
do best to their respective sections.

The government that governs best is the one that governs least. It is
important to note that this does not mean that functions once handled by

the Federal government are simply handed off to state governments. That means nothing to the citizen. Federal taxes going down and state and local going up is a null at best, and passing the buck.

Finally, I think a Centrist is a person who THINKS about issues, not simply chants party dogma.

Yup. I wasn't quite sure what to think of him until one day I was returning from a business trip, and heard him on NPR in a debate with Ralph Nader. It was so refreshing to listen to a debate where issues were discussed, not the weird dance that the presidential debates have become.

> Is the state that elected Dean composed mostly of "liberals" or
> "conservatives"?

Well, they have a republican governor, representatives are 1 democrat and 2 independents (YAY). I like the way they think!

It is jargon, just like RAM, ROM, HDD, CD, DVD, and all the computer alphabet soup.

THe only one that bothers me is when someone says HI HI. The CW use is obviously needed, but if you can't actually laugh at what somone said in conversation, it couldn't be very funny.

I would second that, Jim. Todd, I'll go on record noting that you could
be at the vanguard of something that could serve more hams than your
proposed bulletins and eventually be a great part of the service.

That is why I got my ticket. At least because one of my hobbies is off road 4WD'ing. More often than I care to admit, I get stuck in the woods, and have to call my XYL to let her know I'm going to be late for dinner.

Eventually I found out what fun the hobby is, and went from there.

p.s. Don't you have a name besides your screen name? Seems kinda odd calling you "caveat"! 8^)

Or how quiet they become?

N...@AOL.COM Feb 10, 3:22 am

Y'know what's funny? The same folks who say we don't need restraint
when investing life savings are the same ones who want to restrain stem

cell research, recreational chemicals (except tobacco and alchohol),
contraception, and a bunch of other things.

I asked Jim who these "same folks" were.

Who said we don't need restraint when investing life savings?

Of those who said that, which ones want restraints on stem cell
research, recreational chemicals (except tobacco and alchohol),
contraception, and a bunch of other things?

I think that there are no such people. He's picked up some
broad-spectrum fungicide on Jeanine Giraffalo's show and repeated it.

Unfortunatly.....yes.

We were hoping that there was a Planet X.
This way if there was, when it appears there
would be another group like the Heaven's Gate cultists
that would go and perform some kind of a mass suicide
for our mutual viewing and reading enjoyment of the same.

(see http://www.csicop.org/si/9703/hale.html)

Untill then however, we'll just have to settle for right wing
militialoons that get their sorry ass shot out from under them
or tossed into jail, along with the occasional loon who goes
apeshi+ and shoots up a suburban shopping mall someplace.

(I don't think we'll be seeing another 9/11 for a very long time to come)

Oh well, as Andy Warhol said - "15 Minutes of Fame is our mutual
allocation"

Ciao baby!
xoxoxo

"I like to go to Wal-Mart, find some doofus guy shopping alone, wait until
he isn't looking, toss a Summers Eve douche bag in his cart, get behind
him in line and wait to see the look on his face when the cashier scans
it at the checkout"
- Mollie in alt.sex.lesbians

"You finally found your pacifier; keep sucking on it. Like your hero
Alexander the Homo, the spreader of Greek Syphilisization, you will be
rewarded soon with a mouthfull."
- Susan Cohen the spammer in soc.culture.greek

Funny Network News Moment of the day: Dan Rather,Peter Jennings and Tom
Brokaw couldn't keep a straight face when telling the world that Michael
Jackson
had to go to the ER today because he's got the runs and shi+ his pants in
court.
(I nearly died laughing at this one folks)

It was a while back, around 1997. would it have interfered?? no, if you know
anything about packet; packet time shares a frequency. This guy and his
little group were nothing more then assholes.

> It seems to me that one of the limitations of amateur packet radio is

> would actually have to build a radio to do it...

There are radio that allow higher speed packet including 9600 and 56K. The problem with packet here was the user frequency was being over ran by BBS's automatic fowarding and that's what drove off all the users. 1200 baud would work if the network was set up right.

Well here's the rule read it for yourself
(47 USC 326)
• 326. Censorship
Nothing in this chapter shall be understood or construed to give the
Commission the power of censorship over the radio communications or signals
transmitted by any radio station, and no regulation or condition shall be
promulgated or fixed by the Commission which shall interfere with the right
of free speech by means of radio communication.

Because the cost would be too much. There is no packet network around here
any more and the cost would be too high. A let's not forget some competition
in a service good be a good thing

Those with any sense do not do "free banding" since it is limited by
comparison to legal Ham bands privileges.....

Who doesn't believe it, Brain?

Quotes? Posts?

I know for a fact that Dave Heil, Jim Miccolis and myself have all stated that FCC policy has been to minimize enforcement action in lieu of self-policing, but has and will continue to issue citations to those who violate established band plans, etc, when required to do so.

Now...WHO doesn't believe that "Good Amateur Practice" isn't enforceable?

Quite a few according to many of the more recent FCC enforcement
actions. It would seem that the FCC is more likely to pop a licensed
ham for operating out of their assigned bands, than they are in
popping an unlicensed radio pirate.

If you are going to freeband, having a ham license may actually be
detrimental.

The reason freebanding is as rampant as it is is that the FCC is
simply not affecting all that many people. The chances of getting
popped are very slim, and they usually give you a warning first, which
gives you a chance to pull the plug.

Freebanding is a violation of federal radio law, but without effective
enforcement, that earns very little respect among those who pursue it.

Assuming freebanders have ham licenses. Most don't.

Any ham who works H.F. knows that conditions vary between the bands.
If DX is the name of the game, those who are rabid about it, will seek
out whatever avenues exist to achieve that goal.

From a propagation standpoint, there is little difference in
conditions between 10, 11 and 12 meters. But there are far more
operators on 11 meters at any given time, so there are more chances to
make that "rare" contact.

That doesn't make it right, but it does explain why.

Wow! -
> Why didn't we BBS operators think of this YEARS ago!

Ya missed the point, Charles.

1200 baud packet is a make-do, chosen to be quick and cheap. All you have to do is interface to an FM voice radio.

Getting a significant improvement in bandwidth would mean actually *building radios* designed for the purpose. Which simply hasn't happened in large numbers.

Kind of a sad commentary. When SSB became popular in amateur radio, hams built entire transmitters, receivers and transceivers for the mode. Once its popularity was established, manufacturers followed.

When VHF/UHF FM voice became popular in amateur radio, there was a mix of homebrew and converted-land-mobile equipment used by hams. Once its popularity was established, manufacturers followed.

But from what I can see, the packet folks aren't much interested in *building radios* from scratch. That's why the old standards are still in use.

Some would agree, saying it pushes a populist agenda at the expense of
landlords and bankers. Others would disagree, saying it *helped* the
construction industry and bankers, as well as the auto manufacturers
and many other industries.

Now the tough question: Is it a good policy or a bad policy?

> > How many self-described
> > "conservatives" would support dumping the home mortgage interest

> Not many (any)..... yet.

I remember a time when *all* 'consumer' interest was fed-income-tax
deductible. Sales tax too. Guess who killed that?

> are benefiting the most appear to need tax cuts!

No, they simply *claim* to need them!

Consider this: Deficit spending is essentially a wealth-redistribution
program that takes from the taxpayers (present and future) and gives to
the bondholders
(domestic and foreign).

> > Look at what happened during WW2. Government deficit spending went

> And a way of reducing demand.

Demand didn't matter, because supply was controlled. IIRC, new cars and
houses were simply not built, consumables like fuel were rationed and
many items were
in limited supply, so people made do with what they had.

In part, yes. Perhaps it's better to use the labels "activist" and
"passivist" to describe the differences.

> If you are, you are correct. Both sides have great ideas. Of course,

> I'd think that, cuz I'm just about dead-center. Of course, I think
both

Agreed! But in general, I see way too much ignorance of history and
inability
to forsee consequences today. People are offended by the label
"liberal" - but
try taking away the benefits of "liberal" ideas like some of the tax
laws...

> >>>It's also interesting to note that some people are insulted if you

That's easy to say - and almost impossible to define. The devil is in

Agreed!

It would be interesting to have the candidates prepare position papers
that
simply outlined their plans for the future and their beliefs, *without*
any attacks on their opponents nor claims about their past allowed.
Then let
people read the position papers without knowing who wrote them...
>

| Quite a few according to many of the more recent FCC enforcement
| actions. It would seem that the FCC is more likely to pop a licensed
| ham for operating out of their assigned bands, than they are in
| popping an unlicensed radio pirate.

It's probably because it's a lot easier to track down -- after all, if
the licensed ham is properly IDing himself, it's trivial for anybody
who listens to look up that call sign and find that his ham class
doesn't let him transmit there.

| If you are going to freeband, having a ham license may actually be
| detrimental.

Freebanders don't generally ID themselves at all. To actually track
one down would be a lot harder.

For our county-wide ARES/RACES operation we have a four-node local network that uses four VHF packet frequencies (1200 baud) and four pairs of UHF frequencies (9600 baud), the latter for inter-node and backbone automatic forwarding. We have about 40 users - ten "served agencies" and thirty individual participants. The net is "up" 24/7 and carries a fair amount of inter-user messages -- classic ham radio traffic handling. Several of us including myself have a dedicated radio/TNC/computer running 24/7 just for this purpose.

No reason that it can't work.

Well, the problem here was the operators of the BBS's were told to move
their fowarding to the backbone system but they wouldn't. So the guy who ran
the vast majority of nodes here in the state of Illinois got basically
pissed off and turned the whole system off. that was back around 1998. I
think a newer system would work instead of the "old" packet system.
First the Speed 1200 baud is ok, it work. However, I think if amateur's
could figure out how these wireless networks work and apply that to the
amateur radio service. Instead of having a bunch of "nodes" going across the
United States on a radio frequency have only a "Local Access" point say on a
2 meter frequency which would go from that node through the internet and
backout on 2 meters. Instead of having traditional BBS software remove it
and use a Peer to Peer (P2P) this would be more practical in the sense that
all a person has to do is search for something and get a list. A bbs would
inpractical because in sense that a person would have to monitor the hard
driveand clean it out when it gets full and BBS's uses fowarding while a P2P

system there is no fowarding all the forsale stuff and stupid jokes stays in
the users share file.
Just an Idea....

The "hooking a phone modem to a rig" part was me making fun of the "how slow packet is" whiners.

Packet is (within reason) as fast as you want it to be.

The whiners here are upset because not everyone shares their desires and expectations. - The fact of the matter is that the overwhelming majority of Packet users just don't give a hoot about high-speed Packet, or IP either. It's always been that way and will probably continue to be that way for a very long time.

They whine and they complain... Why, they'll do just about anything - as long as it is negative and reflects poorly upon the hobby.

One thing you won't see them doing is transforming Packet over to high-speed and IP. - It's so much easier and natural for them to whine because somebody else (or everybody else) hasn't done it for them.

Meanwhile - Life goes on, and the whining of frustrated protocol warriors is really a very little thing.

It's getting a little difficult to keep track. However, I think at least the UK, Ireland, France, Germany, Belgium, the Netherlands, Luxembourg, Norway, Sweden, Denmark, Switzerland, Singapore, Australia, New Zealand, Papua Niugini, Hong Kong and South Africa have abolished the code test so far. I think that of these only Austria and the Netherlands even retain an entry level licence that doesn't give HF privileges.

That's only 17 countries, but I expect I may have missed some out. I make the combined ham population of the above something over 260,000 (possibly more than half of them no-coders), so probably a little less than half the number of hams in the US. However, there are well over 50,000 hams in Canada, which is also likely to abolish the code test very soon.

Don't forget that Japan, with a ham population of 1.2 Million (twice that of the US, out of maybe a fifth of your general population), has long had a no-code HF licence, albeit limited to 10 Watts. I'm not sure how many Japanese hams have a no-code HF licence, but they may even rival all the new ones so far put together, although the new guys can use more than 10 Watts! It's probably only a matter of time before Japan lets all of their hams use HF anyway.

Even without the low power Japanese stations, the number of no-coders who have full HF privileges right now is probably about the same as the number of no-code Techs in the US.

However, requiring the various radio services to stick to the rules for their particular radio service is not censorship. For example, the amateur radio service is defined as a two way communications service with a very strict limitation on broadcasting or one way only transmissions. This in no way limits the content of those two way communications. Two or more hams engaged in a discussion can talk about any subject they want to so long as they do not use obscenity (and note that the courts have upheld that obscenity is not protected by free speech). Naturally people can also be held liable in civil court if they engage in slander and the slandered party chooses to sue.

I don't find that tough at all. Any policy that is aimed at benefiting
the most people is generally a good policy. Not always, but pretty often

Or to ask a related question, let us assume that the political
atmosphere of the late 1800's continued until this day. How many of us
would be enjoying "middle classdom" and enjoying the activities that
come with it?

Well, I don't want them regulating my behavior in the bedroom, and I
don't want them regulating my behavior in the market.

Now that being said, there are certain things that I think are common
sense, such as bedroom behavior doesn't include Michael Jackonesque
(alleged) behavior, or robber Baron behavior. But a person has to start
from somewhere, and too strict of definitions forces one either into
pure Libertarian or pure dictatorial view.

Don't go getting ethnocentric on us, Mike. Not very liberal-like. Or maybe it is. They're the ones always counting how many blacks, hispanics, american eskimos, cajuns, etc there are.

Beside, in addition to South Africa, don't forget the UK, Ireland, France, Germany, Belgium, Austria, the Netherlands, Luxembourg, Norway, Sweden, Denmark, Switzerland, Singapore, Australia, New Zealand, Papua Niugini, Hong Kong and Japan.

A tiny fraction of the number of countries which are members of the UN and/or the ITU. Note that most of the countries on Alun's list are chunks of Old Europe and their syncophants where socialist gummint giveaways are rampant compared with the rest of the world.

Nor does it include heavy hitters like the countries of the former Soviet bloc, Brazil, India and China.

Gonna be a LOOONG time before the last code test disappears . .

About 10% as a matter of fact. A minority, but not quite my idea of a
'tiny' fraction. The point is, of course, that we are far from done yet.
Canada may be next.

I'm sure it will be a great comfort to you if the Russian Federation is the
last to keep a code test. They are not my idea of anyone I would want to
emulate, however.

Ten percent is a tiny fraction when compared to 100%.

> The point is, of course, that we are far from done yet.

There's little doubt. The Canadian government is pro-gay marriage too.

South Africa has a population which is a little over 47 million. It has
about 4300 radio amateurs. Finland has that many radio amateurs with a
population of under 5 million. Russia has just under 144 million people
and has about 15,000 amateur licenses. It would seem that Russia isn't

keeping up with the per capita licensing of South Africa. Little Finland can coast for a few decades.

I gather that you prefer life in Maryland to life in the U.K., too, Alun.

As for me, the crime rates in either Russia or South Africa would keep me from wanting to become a resident of either. Then again, we were talking about whether they decided to keep a morse test for amateur radio.

But having a ham license gives freebanders access to equipment that
normally would not be available to unlicensed individuals. Some
retailers will not sell gear to unlicensed persons, nor will some
hamfests award prizes to those who hold no license, offering an
equivalent cash value instead.

260,000/670,000 = about 38.9%

> > However, there are well over
> > 50,000 hams in Canada, which is also likely to abolish
> > the code test very soon.

Yep. But there are two big points about Canada:

1) The proposal would increase the written test level

2) Commentary to the Canadian proposal showed a clear majority
favored the change. That's not the case in the USA, in any survey done
to date, nor in the commentary to FCC.

> >
> > Don't forget that Japan, with a ham population of 1.2 Million

> > long had a no-code HF licence, albeit limited to 10 Watts.

Check your numbers!

Japan has over 3.1 million operator licenses - but they cost nothing
and never expire, so that number is really the number of ham operator
licenses issued since 1955, not the number of present-day hams.

Japanese *station* licenses are a bit over 600,000 now, and have been
dropping for a decade.

The number of new JA licenses has also been dropping.

See the AH0A website.

> > I'm not sure
> > how many Japanese hams have a no-code HF licence,

Well over 95%.

> > but they may even
> > rival all the new ones so far put together, although the new > >
guys can
> > use more than 10 Watts! It's probably only a matter of time
> > before
> > Japan lets all of their hams use HF anyway.

All Japanese hams have HF privileges *today*. Been that way for
decades.

But for all classes of ham license except 4th class, JA hams have a
code test. And there's no move to change that yet.

> > Even without the low power Japanese stations, the number of
> > no-coders
> > who have full HF privileges right now is probably about the
> > same as the
> > number of no-code Techs in the US.
> >
Close enough.
>
> That's 18, I didn't count both Austria and Australia!

OK. But it's still a small fraction of the number of hams
and the number of countries.

The big questions: Must all countries drop the code test because a few have decided to? Or can each country decide for itself.

Has the change caused lots of new growth in countries that have dropped code testing?

I doubt if the hams who freeband are dumb enough to use their calls
there (but you never know). But I wouldn't be surprised to learn that
they are "recognized" there by other people who turn them in.

>| If you are going to freeband, having a ham license may actually be

Yes, I agree. It just seems funny that the latest freeband bust seem
to be hams running out of band over unlicensed operation.

It would seem that Riley H. is much more concerned with keeping
"honest" hams honest, rather than eradicating the freeband.

> I don't find that tough at all. Any policy that is aimed at
benefiting
> the most people is generally a good policy. Not always, but pretty
often

And that's where the trouble is: what *really* helps the most people?
Some
will undoubtedly argue that if the subsidy didn't exist, property
values and taxes
would be lower (because every deduction has to be made up somewhere
else).

Or consider this: the original FHA rules favored new construction over
existing housing. This helped the Levitt brothers and their imitators
enormously, and caused the suburban boom.

But it also helped empty the cities of those who could leave,
tremendously increased dependence on the automobile, and increased
per-capita consumption of all sorts of things. So now we have a nation
that is heavily dependent on imported energy, much of which is used
solely because of suburbanization.

OTOH, isn't a big part of the reason for government to protect the
rights of
the individual against the mob? And the weak against the strong?
>
> Or to ask a related question, let us assume that the political
> atmosphere of the late 1800's continued until this day. How many of
us

Impossible to tell! But consider this:

>From reading old books and biographies, it seems to me that 100 or so
years ago there existed a class of people in the USA that have all but
disappeared.

I don't have a name for this class. The main characteristic of them was
that they didn't have to work. They were folks who had amassed enough
wealth to live comfortably on their investments.

>From what I've read, in those days if a person owned a paid-up house,
and had some decent income-generating stocks and bonds, they could live
pretty well on
relatively little income because taxes were very low and only in
specific areas.
In most towns and cities you didn't need a car or a horse.

Income tax did not exist until WW1, property taxes were low in many
places, etc. Of course if you got sick, the available treatments
weren't expensive because there weren't many treatments!

> >>>How many self-described

Under the guise of "tax simplification" and "getting the govt. off your
back".

A lot of things were eased out of the tax laws so that while the rates
didn't rise, people's actual payments did.

One side would regulate the first and deregulate the second, and
vice-versa.

> HAH! I like that..... Pretty much spot-on.

It may be cynical, but the fact is that a lot of modern politics consists of playing the game better than the other guy. For example, in a number of key swing states, the Pubs managed to get gay 'marriage' referenda on the ballot. More important, they managed to form a connection in voter's minds between gay 'marriage' and the presidential election, even though marriage laws are determined at the state level, not national level. Rather than debate and decide as a society whether gay 'marriage' should be legal or not, the issue was used as a tool of

the presidential election.

You mean, set up the way you'd like.

It still seems to me that what you wanted was for the existing system
to see it your way, rather than creating a new system.

OK, fine.

Now you have to define "free speech" and "censorship". Obviously the
FCC's and Supreme's definitions aren't the same as yours.

Thank you for proving my point! The content and other restrictions of
amateur radio are under other rules and regulations.

Then there's no way amateur radio can 'compete with the internet'. Nor should it.

> There is no packet network around here
> any more and the cost would be too high.

For whom?

The problem with any amateur network is that you're dependent upon individuals or
small groups to put up stations that cost $$ but are mostly used by others. So the
people who actually put the stations on the air want control over how they are
used. Which is perfectly reasonable, isn't it?

> A let's not forget some competition
> in a service good be a good thing

If it costs too much, doesn't that mean the competition is lost?

K2ASP has described a system that is functioning *today* in his area. Sounds pretty good. Betcha it didn't get built by people calling others assholes.

You've not answered my question, Brian.

Who doesn't believe that "Good Amateur Practice" isn't
enforceable?

Was the person you allege to have made this transgression
operating his station within the parameters of his license?
(Remember...only TRANSMITTING is regulated by the license...NOT
receiving).

Was the person obligated by law to know the bandplans of the
French (or any foreign) operators?

Do YOU know the bandplans of all the foreign stations YOU "work"?

Can you attest to the 100% legality of any contacts you have made
based upon any out-of-band operation by the foreign operator?

Come on, Brian...You're insinuating you have some inside knowldege
on foreign operating, here...Strut your stuff.

I didn't say you have, Brian, and you are more than welcome to
repost the comments wherein you think I said you DID...

I said the "VISION" of you doing it made sense.

It still does.

> Get a grip before you lose yourself in a fit of rage then go
catatonic on us.

Speaking of a "fit of rage", you really need to go back and read
your own post there, Skippy.

There's no "rage" in my part. Just overt laughter at the idea of
you playing with your little tugboat going "toot toot".

> Best of luck.

No luck needed. You supplied everthing I needed...Again. Thanks.

I have no idea what you're saying there, Todd.

Packet can be ran on both VHF, UHF, and HF

Who decides how much time each system gets? If systems have to wait for
the frequency to be quiet, the existing systems could experience
"interference" if they can't get a byte in edgewise.

If you know anything about Packet...Packet runs on a "time-shifting" system.
A tnc will listen on the frequency and transmit when the frequency isn't
being used. This is called time-shifting.

> This guy and his
> little group were nothing more then assholes.

Well, that's *your* opinion...

It's not my opinion it a fact.

>Sure - but 1200 lives on as the most popular, right?

1200 baud is popular so is 300 baud on HF. look THC's can go the higher
speeds; there are TNC's out there that can do 14.4K and 56kb. The problem
isn't the TNC's; the problems is the radio. Radio's can not key up fast
enough that has always been the main problem with high speed packet.
> The
> problem with packet here was the user frequency was being over ran by
BBS's
> automatic fowarding and that's what drove off all the users. 1200
baud would
> work if the network was set up right.

You mean, set up the way you'd like.

It still seems to me that what you wanted was for the existing system
to see it your way, rather than creating a new system.

NO, Look I know the guy who ran and owned the majority of nodes here in
Illinois. He shut the system down because The BBS operators wouldn't move
their fowarding to the backbone system. Instead they were running it on the
Users frequency. (in Illinois there was only ONE USER FREQUENCY) So the BBS
were fowarding the vast majority of the time and it drove people out of
packet here in Illinois and they guy who owned the majority of the network
got pissed off about it and shut it down.SO NOW THERE IS NO PACKET IN
ILLINOIS!

OK, fine.

Now you have to define "free speech" and "censorship". Obviously the
FCC's and Supreme's definitions aren't the same as yours.

> > > the only content the FCC is allowed to

Thank you for proving my point! The content and other restrictions of amateur radio are under other rules and regulations.

The only REAL content amateurs have that is restricted is Obscene and Indecent material and Commerical type messages.

> Because the cost would be too much.

Then there's no way amateur radio can 'compete with the internet'. Nor
should it.

Then amateur's are doomed, Living with and uses outdated modes of
communication in a digital age aren't going to cut it because nobody will
want to go into a service that that's (useless Modes) is all their going to
get. Again Amateur's have to come up with something new to offer to get more
people into it.

> There is no packet network around here
> any more and the cost would be too high.

For whom?

The problem with any amateur network is that you're dependent upon
individuals or
small groups to put up stations that cost $$ but are mostly used by
others. So the
people who actually put the stations on the air want control over how
they are
used. Which is perfectly reasonable, isn't it?

Like I stated above the Packet network here in Illinois is gone there is no
Packet here in Illinois due to problem of BBS operators fowarding on the
user frequency.

> A let's not forget some competition
> in a service good be a good thing

If it costs too much, doesn't that mean the competition is lost?
K2ASP has described a system that is functioning *today* in his area.
Sounds pretty good. Betcha it didn't get built by people calling others
assholes.
What I was refering to when I'm talking about Competition is new idea's and
new modes of communication. I suggest you read my repond to him. As for that
asshole I was refering to wasn't even on packet. He was claiming
"Interference" to his station which was sitting 1.905MHZ away from the
packet frequency. Again he wasn't even on packet he was and is a ASSHOLE.

One more out of 185 or so <snore>. Let's see here . . where's my
sliderule . . . if four "dominoes" per year fall, which is about the
current rate and the rate is maintained it'll be 2046 before the last
code test requirement is dropped.

<snore²>.

> >
>
> Those countries have large populations, but they don't they have the
> highest numbers of hams per head.

Nonsense. What government has made the code/nocode decision based on it's number of hams per capita?? None of course. My point is that governments make these kinds of decisions based on their culture-based inclinations in such matters. Which is to say that the former Soviets, Brazil, India and China are not socialist giveaway swamps like Sweden, France and the rest and are far less likely to quit the code tests. Which in turn brings up the question about how many billions of people will probably continue to live under regimes which require code tests vs the number who will not require code tests.

Of course.

Now suppose there are three stations on a frequency, each with about
the same level of traffic. Each will wind up with about 1/3 of the time
on the air.

But if a new station comes on frequency with a lot of stuff to send,
those existing stations will have to wait and wait for the frequency to
be quiet. While that's not "interference" in the classical QRM sense,
it *is* interference in the sense that throughput is reduced.

> > This guy and his

> isn't the TNC's; the problems is the radio. Radio's can not key up
fast
> enough that has always been the main problem with high speed packet.

So build new radios specifically for high speed packet. We're radio
amateurs, right? We're one of the few - maybe the only! - radio
services
that even *allow* licensees to build radios without a whole bunch of
certifications and such.

So what's the big deal about building your own highspeed packet radio
from scratch? I've built several HF rigs from scratch....

Why wouldn't they move it to the backbone system?

Isn't the "user frequency" for users? If so, it seems to me that the
forwarding should go by the backbone system. To do otherwise is
like putting the locals and expresses all on the same track, and
then complaining because there are so many late trains.

> Instead they were running it on the
> Users frequency. (in Illinois there was only ONE USER FREQUENCY) So
the BBS

Ah! Now I understand.

Why wouldn't the BBS folks use the backbone system? And do you blame
the
owner of the nodes for shutting them down? They're *his* nodes,

right?
He's got the responsibility for them, right?

> SO NOW THERE IS NO PACKET IN ILLINOIS!

That's sad. Is there no one in IL who will put up some nodes?

Ethnocentricity is at the core of the problem there, not me going
ethnocentric.

AES in Wickliffe, OH did this for a while in the late 1980s, but they
may have discontinued the practice.
There was also a hamfest in Pittsburgh that had a license requirement
to claim any radio prizes. If you didn't have a license, you got cash.

Heh heh heh. Pour lil Stebie (he musta "poured" hisself one too
many)
can't keep track of time. AOL shut off newsgroups on Feb 9, a
Wednesday.
I last posted on 14 Feb 05 via Google. :-)

Tsk, he "sees" things that aren't there...and can't see things that
are!

Hmmm...who say "lie and deceive?" Must be Stebie...to himself.

WOuld it be illegal to use my callsign as my "cb handle" on
CB using legal CB equipment? Or would I be using my ham
license out of band? Not that anyone would really care, but....

I've heard second hand of hams, bored of regular ham bands,
doing "freeband" for a change of pace.

There's a simple solution and that is to put a quota on the number of annual
visitors. Simply make them "stand in line" for reservations.

It is 1/10. You could compare it to 10/10, but then you'd defeat the
purpose of showing it as a ratio.

Ah, yes. The inverse rule.

Is that like ten percent being compared to one hundred percent?

Would it work out better if one hundred percent were compared to ten
percent?

But if they don't wear Birkenstock's? Do they have to be Demoncrats and
gay marriage proponents? Voted for Kerry and in favor of child molestation?

Seriously though, I agree with you that some people have a selfish take
on the issue, but gee whiz Brian, you have the camps separated so well!
It just isn't that black and white. You have good points, but if you
wish to do a limbaugh on everything, it hurts your position.

But back to the issue at hand, it would not be all that difficult to
have the amateurs trained to minimize the impact on the birds and other
critters.

If "A single person can cause a great amount of damage even before they
know they are doing it", then well, those birds and sea lions and
whatever are going to go extinct on the PDQ regardless of wherther
humans visit the island or not.

Wouldn't it be terrible to allow birders on the island? Birders are a known source of bird extinction, especially since they hate birds so much.....

Last time I checked France and Sweden were capitalist countries and China
was socialist. As for Russia, the old communists seem to be taking over
again, albeit they don't actually care what system they rule over, nor ever
did, IMHO.

Of course.

Now suppose there are three stations on a frequency, each with about
the same level of traffic. Each will wind up with about 1/3 of the time
on the air.

But if a new station comes on frequency with a lot of stuff to send,
those existing stations will have to wait and wait for the frequency to
be quiet. While that's not "interference" in the classical QRM sense,
it *is* interference in the sense that throughput is reduced.

That's what on VHF here in Illinois So much qrm and interference from
fowarding.

> > This guy and his

Of course!

> The problem
> isn't the TNC's; the problems is the radio. Radio's can not key up
fast
> enough that has always been the main problem with high speed packet.

So build new radios specifically for high speed packet. We're radio
amateurs, right? We're one of the few - maybe the only! - radio
services
that even *allow* licensees to build radios without a whole bunch of
certifications and such.

So what's the big deal about building your own highspeed packet radio
from scratch? I've built several HF rigs from scratch....

better yet idea is to figure out how those wireless cards operate and a way
to convert them into the ham bands.

Why wouldn't they move it to the backbone system?

I really have no idea but I have a system that would resolve all those
problems.

Isn't the "user frequency" for users? If so, it seems to me that the
forwarding should go by the backbone system. To do otherwise is
like putting the locals and expresses all on the same track, and
then complaining because there are so many late trains.

So true.

> Instead they were running it on the
> Users frequency. (in Illinois there was only ONE USER FREQUENCY) So
the BBS
> were fowarding the vast majority of the time and it drove people out
of
> packet here in Illinois and they guy who owned the majority of the
network
> got pissed off about it and shut it down.

Ah! Now I understand.

Why wouldn't the BBS folks use the backbone system? And do you blame
the
owner of the nodes for shutting them down? They're *his* nodes,
right?
He's got the responsibility for them, right?

> SO NOW THERE IS NO PACKET IN ILLINOIS!

That's sad. Is there no one in IL who will put up some nodes?

No one wants to get back into packet...to them packet is dead and a useless
system (this idea is based on how the network was set up)

But who decides what is obscene and indecent?

The Supreme court pretty much defined obscene and in indecent in MillerVs
California, it's that three prong that the courts and the govenment looks
at.

That's not a cost issue; it's an organization issue.

It is a cost issue because if you were set up node the old way you have to
pay for radio's, TNC, computers, space, antenna, coax.

>
> > A let's not forget some competition

Will do. But it seems to me that if you want new modes, you should be
leading the way, not demanding others do it.

I'm not demanding but one person can't do it all..

> As for that
> *asshole* I was refering to wasn't even on packet. He was claiming

There are specific case opinions of the Supreme Court of the United States which define same.

Do not forget that in addition to banning certain types of content, the FCC also forces certain types of content such as transmitting station ID at specified times in specific format.

It's even worse for broadcasters who also have to transmit EAS material, renewal filing notices, and sponsorship notices in addition to station ID.

None of the above are the "censorship" which is envisioned in Sec. 326, though.

Be happy for what we have and don't have.

What's incredible is how you two can actually be so well
documented as liars and still think that you're believed by anyone
about anything even when you're right about something...Which is
rare...

> > >> Telling the truth and distancing yourself from other persons

> > are!
>
> That would present problems for most people.

> > Hmmm...who say "lie and deceive?" Must be Stebie...to himself.

Nope.

To Leonard H Anderson...Who can't take this post to a lawyer and
say "make him stop" becasue he knows who'd be proven the liar and who'd
be laughing all the way home.

> Better go easy. He might start yelling at hisself.

Naw...Just laughing at the "superior intellect".

What a waste of opportunity your life has been, Lennie...To wind up
the laughing stock of the practitioners of a technical hobby that you
could have been a "household name" of...

How's the wifey?

Oh...no complaint. Just an observation. You delve into the same
"Nursie" and other "endearments" that your Chief String Puller uses, so
you can benefit from his trailblazing.

And I thought we were moving along nicely until you reopened this
can of worms. I knew you wouldn't be able to keep a civil tounge
long...

It's called an "imagination", Brain...

The same "imagination" you used to create all those DXploits
you've tried to embellish your Amateur career with.

And I still don't need any luck to deal with you. Ever.

NEWS FLASH! -

Rooters News Service

Southern California's worst air disaster occurred when a small two-seater Cessna 150 plane, piloted by Leonard H. Anderson of Sun Valley, California, crashed into a cemetery earlier today.

Search and rescue workers have recovered 300 bodies so far and expect the number to climb as digging continues into the evening.

The pilot and his wife, Sigmundi "Moon Unit" Anderson survived and are helping in the recovery efforts.

Part of the article was on how the scientists didn't even want Birders on the island. My take is that Birders, who always try to observe birds with as little interference to the birds as possible, are the last people who would harm them. Seems the scientists are just trying to keep people away from "their turf".

You are correct, there is no such written rule. However some merchants
take it upon themselves to enforce this "rule". IMHO, if they make
enough money that they can afford to turn away potential customers,
more power to them. Most ham stores though, aren't exactly busting at
the seems with buyers......

If you are running legal CB gear on legal CB channels, you certainly
can use a ham call as a "handle". Why someone would is another
question.

Given your track record, especially in recent times (see: """....."""
posts by "bb"), I'm going to have to believe my eyes. You have an
attribution problem. You can attempt to argue the point if you like.
That won't change what was posted.

I'm going to give "bb" a break here. I'm discounting all of his deliberate untruths and misstatements. This looks like simple incompetence on "bb's" part. It is similar to his recent posts which shows quoted material in triple quotation marks. Other recent posts have been what appear to be responses to the posts of another, but which contained no quoted material at all to provide the reader any context. "BB" made an error which made it appear that I wrote something which I did not write. It is incumbent upon him to be more careful.

mention
> the big ones by name of course.

Of course, because first of all it's the big countries which set trends
at least regionally and it's their huge numbers of citizens who would
potentially be most affected by changes in ham radio regs. Which is a
whole different topic from the effects on their existing ham
populations whatever their number.

They're both socialist Alun. The only difference being that China uses the Marx/Lennin model and Sweden is the model for Old Europe socialism.

> As for Russia, the old communists seem to be taking over
> again, albeit they don't actually care what system they rule over,
nor ever

Never in their thousand year history have the Russians lived in a democracy or a capitalist society, their genes need to be conditioned before they get their act together by western standards. In the meanwhile they're suffering from massive startup lumps and bumps which were predicted long before the Soviet Union actually imploded. Whatever this has to do with code tests.

BINGO: There it is. Old Europe. Sez it all.

Not in your lifetime Alun.

'Bye.

> with both fetures could be designed without too much trouble.

One of the things that has been repeatedly promised and predicted for
the
various license test changes was that we'd get more 'technically
inclined'
new hams, who would revolutionize ham radio with 'new modes and
modulations' and other neat stuff. Yet when it comes to actually
building radios, we
see even the self-proclaimed 'professionals in radio' buying them
ready-made.
And ginving those who *do* build their own rigs a raft of $&!# about
doing so.

Kinda makes ya wonder....

> > Kind of a sad commentary. When SSB became popular in amateur radio,

I recall reading some *years* back about how TAPR was developing a UHF
SS radio for packet. Don't recall that it ever got finished.

Quite a bit less than half.
> >
> >> > However, there are well over

This is a biggie. Simply proposing to drop the code test is *not* the same thing as proposing to drop the code test *and* beef up the writtens.

IIRC, one of the things proposed in Canada was to make the code test optional in that if you passed code you didn't need as high a grade on theory to get the license.

If the nocodetest folks in the USA proposed options like those they might get a lot more support. But instead, we have folks like NCVEC telling us we must drop code *and* reduce the written still more.

> > 2) Commentary to the Canadian proposal showed a clear majority
> > favored the change. That's not the case in the USA, in any survey
done

And for ten years JA ham license numbers have been dropping fast.
With nocodetest HF.

> >> > Even without the low power Japanese stations, the number of
> >> > no-coders who have full HF privileges right now is probably
about

> >> >
> > Close enough.
>
> And if there are already that number of no-code hams on HF without
any
> incident, what is the problem with abolishing the code test here?

The USA isn't Japan. Different society, different culture, different
rules.

It would be interesting to see what the JA 4th class *written* exam
looks like.

And as mentioned before, the number of JA station licenses and new
operator licenses is way down.

> >> That's 18, I didn't count both Austria and Australia!

The trend in most countries is to ban or severely restrict individual ownership of firearms, too.

> > Has the change caused lots of new growth in countries that have
> > dropped code testing?

> No, but it's increased HF activity in those countries

So all it's done is to permit *existing* hams to upgrade. But it *hasn't* brought in lots of new folks.

i have used their milia treatment for milia seed on my eye brown area
and below cheek. after three applications, i noticed a reduction in the
milia size, quite impressed as i thought only laser surgery can solve
my problem.
---
zest_f...@yahoo.com
i keep seeing reviews and raves about this
http://www.naturalisproducts.com and http://www.organiconline.com.sg .
many people are discussing in beauty forums and magazines have positive
reviews on this . but this thing ain't new, its been around for many
years! anyone tried can feedback to me on exactly how good it is?

---
can anyone help me please, am looking for the local distributor or any
shop selling the naturalis range of skin and body care products, from
this company http://www.naturalisproducts.com . looking for this
urgently. for those who have not come across it, its some foodbased
anti-aging products. i googled for this and received result showing its
available at http://www.organiconline.com.sg. i need this
urgently but shipping from singapore will take some time, if anyone is
distributing this please contact me at g...@raterenterprise.com
urgently. i have a group of us looking to buy this. thanks!

Remember when stations had to do "public service" or
"community" programs, usually played on Sunday morning?
Stuff nobody ever listened to. There was a time when
you could not find anything at all to listen to on the
radio Sunday morning.

I got my start in radio with a legal CB radio back in 1976.
Then got a ham license and never went back. If I wanted
to "freeband" I can legally use the 10 meter band as a ham
for the same operations. But with the sunspots out, I
can use 20 or lower just as legally.

From what you've come up with this time, you again have me writing:

"If only we could introduce Todd to WA8ULX."

"Heil actually has a point, smug as it is."

"I think what we are seeing is the start of this decade's chicken little
dance."

The only problem is, I didn't write any of those things. You're
drifting
farther off course, "bb".

Not.

Why do you say that I'm doing it? I merely hit the reply button and
google performs the attributions.

And it was after the Buzz Lightyear post that you commented about the
attributions being wrong. I think you just need something to complain
about.

David, no argument. I'm merely using googles "reply" button. I think
the goofed attribution came in after Commander Buzz Corey's comment.

Yep. Agreed.

Then there are the lepidopterists. They stick little pins through the bodies of threatened and endangered butterfly species, but won't let anyone else cause harm.

China is a communist country, and Sweden uses capitalism combined with
substantial welfare elements.

At least that is what the CIA factbook thinks.....

Now that just seems strange. The test should either be or not be. Not
some kind of bonus that allows you to be less technically proficient.

> If the nocodetest folks in the USA proposed options like those they
> might get a lot more support. But instead, we have folks like NCVEC
> telling us we must drop code *and* reduce the written still more.

And how! Let's not forget that NCI also supports lowering the test
requirements.

All they have to go on is "gut" feelings. And unfortunately, the first
wave of no-code Technicians appear to be dropping like flies. "Gut"
feelings can be wrong.

Theirs is a failed and incorrect paradigm.

We don't need hams that thought that maybe it would be kewl to get a
ham license some weekend between coffee at Starbucks and their Pilates
classes, and then forget about it. We need hams who want to be hams.

>>>2) Commentary to the Canadian proposal showed a clear majority

Quick! Let's emulate Japan! Except we can do it better by allowing the
newbies full power privileges.

Japan's obvious success can be our own!

>
>
> The USA isn't Japan. Different society, different culture, different
> rules.

I don't know if any of us geniuses have though about it, but lets say
in a country where a business can get successfully sued for a woman not
knowing that here hot coffee was hot, and burning herself when trying to
hold the darn thing between her legs. (sorry Phil, but what if she
simply ruined her dress because the coffee was wet?- negligent design of
the cup?)

So lets have a newbie ham that fires up his/her kilowatt rig, and is
half fried because no one told him not to touch the wirey thingies on
the back of the box thingy. Ohh, I can see the successful lawsuits already!

I've nailed myself with 50 watts, enough to produce a painful burn and
a cute little scar on the boo-boo finger. Some dunce that catches a ride
on a thousand watts might just have a very successful lawsuit if we
don't train them well.

RF Safety should be the FIRST order of the day, and NO one should be a
Ham until they are tested for RF safety to the ability to handle full
legal limit.

And those who think that limiting the finals voltage, or some other
weird thing is the answer, are advised to think about things such as
Technician Hams operating under supervision. It only takes a second to
drop a paper and reach behind a Rig. Less time than the control op can
react. I want those Technicians to be exposed to full power safety
requirements.

Anything else is criminally negligent.

We have very different political views. I don't know how you would classify
yourself, but by European standards you are very far to the right indeed,
as by no stretch is Sweden a socialist country.

As for myself, I used to be a card carrying member of the Conservative and Unionist Party in the UK, but I freely admit that I have drifted leftwards since then, very likely as a result of seeing at first hand the huge social inequalities in the USA.

If it's called being a socialist to think that the ordinary working man should be able to get medical care without courting bankruptcy, then I suppose that makes me a socialist, but if you actually look in a dictionary, then you will see that I am not, and neither are the Swedes.

socialism /□□/ n.
1 a political and economic theory of social organization which advocates that the community as a whole should own and control the means of production, distribution, and exchange.
2 policy or practice based on this theory.
socialist n. & adj.
socialistic /□/ adj.
socialistically /□/ adv.
[French socialisme (as social)]

They proposed that in South Africa too, but they didn't do it, and I don't
think they will in Canada either, judging solely from having read all the
public comments

Perfectly true, but I see getting these people onto HF as a good thing

Well, it is a problem. No-coders may have been in the hobby, but they couldn't do everything that they wanted to do. Not that I'm saying that the Tech theory should get you full privileges, but there have always been many Techs who could pass Extra class theory. Herding them above 30 MHz is a problem, not for you perhaps, but still a problem.

People who have not passed the test have been kept out of things they
want to do in the hobby too.

> Not that I'm saying that the
> Tech theory should get you full privileges, but there have always been many
> Techs who could pass Extra class theory.

Yup, Like me. But I apparently showed the character flaw od learning
Morse code! ;^)

As a guy who can't "hear" people unless he can see the mouth of the
person speaking, I have just a little trouble figuring out the problem
with normal people for which the test is too hard to make it worth
getting a license.

But it is! Witness all those who are dropping off the ranks when their
license expires.

I predict the next tack of the NCI's is that not allowing the codeless
Techs HF access is why they aren't renewing their license.

> Herding them above 30 MHz is a
> problem, not for you perhaps, but still a problem.

"Herding" is a strange name for allowing access to almost all the
Amateur spectrum.

1649. Re: The Death of Amateur Radio

Newsgroup: rec.radio.amateur.policy
Date: 2005-02-19 04:41:12 UTC
From: Todd Daugherty <toddaug@consolidated.net>
Message-ID: <4216c40a$1_2@127.0.0.1>
Source record: 103165

Well let's look at some numbers shall we....

The following are the Numbers of people entering the amateur radio service:

DATE TOTAL

12/04/04 671,837
01/02/05 667,562 down by 4,275
01/09/05 668,051 up by 489
01/16/05 668,750 up by 735
TOTAL STILL DOWN 3,015

The bottom line numbers really don't lie...people can say amateur radio is on the rise but the actually truth is the number of people getting in the service is still down from the previous month

Todd

1650. Mores code ham gets fined

Newsgroup: rec.radio.amateur.policy
Date: 2005-02-19 05:12:36 UTC
From: robert casey <wa2ise@ix.netcom.com>
Message-ID: <8VzRd.3963$x53.152@newsread3.news.atl.earthlink.net>
Source record: 103166

Didn't think this could happen; someone operating
Morse code violating the rules....

from the ARRL web site newsletters:
http://www.arrl.org/arrlletter/05/0218/

The FCC has affirmed a $4000 fine for Paul D. Westcott, KC0OAB, of Purdy, Missouri, for "willful and repeated failure to respond to Commission requests for information about his station." The Commission released a Forfeiture Order in the case on February 16. The FCC reports it has received "numerous complaints" alleging that KC0OAB for several months now has been transmitting CW "24 hours a day, 7 days a week" on 7.030 MHz. While complainants assert the transmissions constitute broadcasting, the FCC contends they interfere with other amateur communications "due to an apparent lack of station control."

> Kinda makes ya wonder....

You can forget about hams becoming more technical, that is a thing of
the past. Todays hams are strictly plug and play appliance operators,
the most technical they get now is how many push buttons are on the
front panel and how many memories in the radio. The best we can hope for
is that the test be geared such that they learn the rules and proper
operating procedures.

>
Well let's look at some numbers shall we....

The following are the Numbers of people entering the amateur radio service:

DATE TOTAL

12/04/04 671,837
01/02/05 667,562 down by 4,275
01/09/05 668,051 up by 489
01/16/05 668,750 up by 735
TOTAL STILL DOWN 3,015

The bottom line numbers really don't lie...people can say amateur radio is
on the rise but the actually truth is the number of people getting in the
service is still down from the previous month

> Many radio amateurs would disagree with your statement because it has no
> basis in fact. Now THAT is harsh reality.
>

>
> Amateur radio isn't a commercial service and isn't in competition with
> commercial services. It has no reason to "keep up".

And it's THAT attitude that will kill amateur radio. No one will come to the
service if there is something BETTER out there.

> > On

Not comparable, what you are comparing is two hobbies while I'm comparing
two communication system, One dominate (internet) and the other is a third
class communication system (amateur radio).

>

The majority of people don't what amateur radio is...and the vast majority
of people don't care.

> Amateur radio has variety of information unlike the internet. People

Voice, Morse code, television on and on can ALL be done on the internet.
what amateurs need to is advance and come up with something a lot new...My
packet idea is one way.

First off the system wasn't up and running so he should of shut his fucking
mouth because information bulletins are LEGAL. My information bulletins run
on one day, for one hour and deal with amateur radio issues....thus legal.
If it's interfering with transmission (which it isn't) fine then go after
the interference but to get on a newsgroups and intimidate a system BEFORE
IT'S EVEN ON is showing how he and the Fucking FCC really are...ASSHOLES!

Intimidate someone before they have the system is even up and running is a
form of suppression. secondly if you didn't read above my information
bulletins are legal. My information bulletins run on one day, for one hour
and deal with amateur radio issues. They are legal regardless of what you
think.

Cross-posted to: rec.arts.sf.movies,rec.radio.amateur.policy,rec.arts.animation

Im tellin yah it workx and its so worth it

Turn $5.00 into $50,000...read this to find out how!!!
READING THIS COULD CHANGE YOUR LIFE!!!
I found this on a bulletin board like this one and decided to try it.
A little while back, I was browsing through a newsgroup, just like you are now, and came across an article similar to this that said you could make thousands of dollars within weeks with only an initial investment of $5.00! So I thought, "Yeah right, this must be a scam", but like most of us, I was curious, so I kept reading... I also did an internet search and found nothing but success stories.

Anyway, it said that you need to send $1.00 to each of the 5 names and address stated in the article. You then place your own name and address in the bottom of the list at ..5, and post the article in at least 200 newsgroups. (There are thousands) No catch, that was it. So after thinking it over, and talking to a few people first, I thought about trying it. I figured "what have I got to lose except 5 stamps and $5.00, right?"

Then I invested the measly $5.00 (I use the word "measly" because $5 really is measly compared to the money I have made through the initial investment). Well GUESS WHAT!!... within 7 days, I started getting money in the mail! I was shocked! I figured it would end soon, but the money just kept coming in.
In my first week, I made about $25.00. By the end of the second week I had made a total of over $1,000.00! In the third week I had over $10,000.00 and it's still growing.

This is now my fourth week and I have made just over $42,000.00 and it's still coming in rapidly. It's certainly worth $5.00, and 5 stamps, I have spent more than that on the lottery!!
Let me tell you how this works and most importantly, why it works....
Also, make sure you print a copy of this article NOW, so you can get the information off of it as you need it.
I promise you that if you follow the directions exactly, that you will start making more money than you thought possible by doing something so easy!

Suggestion:
Read this entire message carefully! (print it out or download it.)
Follow the simple directions and watch the money come in! It's easy.
It's legal. And, your investment is only $5.00 (Plus postage)

IMPORTANT:
This is not a rip-off; it is not indecent; it is not illegal; and it is virtually no risk - it really works!!!! If all of the following instructions are adhered to, you will receive extraordinary dividends.
PLEASE NOTE:
Please follow these directions EXACTLY, and $50,000 or more can be yours in 20 to 60 days.
This program remains successful because of the honesty and integrity of the participants. Please continue it's success by carefully adhering to the instructions.
You will now become part of the Mail Order business. In this business your product is not solid and tangible, it's a service. You are in the business of developing Mailing Lists.
Many large corporations are happy to pay big bucks for quality lists. However, the money made from the mailing lists is secondary to the income which is made from people like you and me asking to be included in that list.
Here are the 4 easy steps to success:

STEP 1:
Get 5 separate pieces of paper and write the following on each piece of paper "PLEASE PUT ME ON YOUR MAILING LIST."
Now get 5 US $1.00 bills and place ONE inside EACH of the 6 pieces of paper so the bill will not be seen through the envelope (to prevent thievery).
Next, place one paper in each of the 5 envelopes and seal them. You should now have 5 sealed envelopes, each with a piece of paper stating the phrase "PLEASE
PUT ME ON YOUR MAILING LIST.", your name and address, and a $1.00 bill.
What you are doing is creating a service. THIS IS ABSOLUTELY LEGAL!
You are requesting a legitimate service and you are paying for it!
Like most of us I was a little skeptical and a little worried about the legal aspects of it all. So I checked it out with the U.S. Post Office (1-800-725-2161) and they confirmed that it is indeed legal!
Mail the 5 envelopes to the following addresses:

..1) Jason R
3702 Werner Ave.
Austin, TX 78722

..2) J Arenas
1600 Malibu
Carrollton, TX 75006

..3) Richonda S
CMR 402 BOX 274
APO, AE 09180

..4) J Roth
2901 Barton Skyway ..3406
Austin, TX 78746

..5)Jesse James
1778 Swift Ave.
Ventura, Ca 93003

STEP 2: Now take the ..1 name off the list that you see above, move the other names up (5 becomes 4, 4 becomes 3, etc...) and add YOUR Name as number 5 on the list.

STEP 3: Change anything you need to, but try to keep this article as close to original as possible. Now, post your amended article to at least 200 newsgroups. (I think there are close to 32,000+) All you need is 200, but remember, the more you post, the more money you make!

This is perfectly legal! If you have any doubts, refer to Title 18 Sec. 1302 & 1341 of the Postal lottery laws. Keep a copy of these steps for yourself and, whenever you need money, you can use it again, and again.

PLEASE REMEMBER that this program remains successful because of the honesty and integrity of the participants and by their carefully adhering to the directions.
Look at it this way. If you are of integrity, the program will continue and the money that so many others have received will come your way.

NOTE:
You may want to retain every name and address sent to you, either on a computer or hard copy and keep the notes people send you. This VERIFIES that you are truly providing a service. (Also, it might be a good idea to wrap the $1 bill in dark paper to reduce the risk of mail theft.)
So, as each post is downloaded and the directions carefully followed, five members will be reimbursed for their participation as a List Developer with one dollar each.
Your name will move up the list geometrically so that when your name reaches the ..1 position you will be receiving thousands of dollars in CASH!!!
What an opportunity for only $5.00 ($1.00 for each of the first five people listed above)
Send it now, add your own name to the list and you're in business!

---DIRECTIONS ----- FOR HOW TO POST TO NEWSGROUPS----------
Step 1)
You do not need to re-type this entire letter to do your own posting. Simply put your cursor at the beginning of this letter and drag your cursor to the bottom of this document, and select 'copy' from the edit menu. This will copy the
entire letter into the computer's memory.
Step 2)
Open a blank 'notepad' file and place your cursor at the top of the blank page. From the 'edit' menu select 'paste'. This will paste a copy of the letter into notepad so that you can add your name to the list.
Step 3) Save your new notepad file as a .txt file. If you want to do your postings in different settings, you'll always have this file to go back to.
Step 4)

Use Netscape or Internet explorer and try searching for various newsgroups (on-line forums, message boards, chat sites, discussions, etc.)
Step 5)
Visit these message boards and post this article as a new message by highlighting the text of this letter and selecting paste from the edit menu. Fill in the Subject, this
will be the header that everyone sees as they scroll through the list of postings in a particular group, click the post message button.
You're done with your first one!
Congratulations...THAT'S IT!
All you have to do is jump to different newsgroups and post away, after you get the hang of it, it will take about 30 seconds for each newsgroup!
REMEMBER, THE MORE NEWSGROUPS YOU POST IN, THE MORE MONEY YOU WILL MAKE!! BUT YOU HAVE TO POST A MINIMUM OF 200
That's it! You will begin receiving money from around the world within days! You may eventually want to rent a P.O.Box due to the large amount of mail you will receive. If you wish to stay anonymous, you can invent a name to use, as long as the postman will deliver it.
JUST MAKE SURE ALL THE ADDRESSES ARE CORRECT.
Now the WHY part:
Out of 200 postings, say I receive only 5 replies (a very low example).
So then I made $5.00 with my name at ..5 on the letter.
Now, each of the 5 persons who just sent me $1.00 make the MINIMUM 200 postings, each with my name at ..5 and only 5 persons respond to each of the original 5, that is another $25.00 for me, now those 25 each make 200 MINIMUM posts with my name at ..4 and only 5 replies each, I will bring in an additional $125.00!
Now, those 125 persons turn around and post the MINIMUM 200 with my name at ..3 and only receive 5 replies each, I will make an additional $626.00!
OK, now here is the fun part, each of those 625 persons post a MINIMUM 200 letters with my name at ..2 and they each only receive 5 replies, that just made me $3,125.00!!!
Those 3,125 persons will all deliver this message to 200 newsgroups with my name at ..1 and if still ONLY 5 persons per 200 newsgroups react I will receive $15,625,00!
With an original investment of only $5.00! AMAZING! When your name is no longer on the list, you just take the latest posting in the newsgroups, and send out another $5.00 to names on the list, putting your name at number 5 again. And start posting again.
The thing to remember is do you realize that thousands of people all over the world are joining the internet and reading these articles everyday?, JUST LIKE YOU are now!!
So, can you afford $5.00 and see if it really works?? I think so...
People have said, "what if the plan is played out and no one sends you the money? So what! What are the chances of that happening when there are tons of new honest users and new honest people who are joining the internet and newsgroups everyday and are willing to give it a try?

Estimates are at 20,000 to 50,000 new users, every day, with thousands
of those joining the actual internet.
Remember, play FAIRLY and HONESTLY and this will really work!!!

1655. Re: Lennie Resumes Flying "Career"...Results Predictable...Hundred's Dead...

There's a big difference between mischievious humor and
intentional deceit.

You and Lennie can't tell the difference. It's when you persist
in your story after having been corrected that it goes from one to the
other.

My grip is quite firm, Brian.

I warned you where this would go if you continued with your course
of action a couple days ago.

And your reference ot me as "Nurse" is situational. You've mimiced
Lennie's "nursie" on several occassions.

> > And I thought we were moving along nicely until you reopened

And as any competent statistician can tell you, a variation over this short time frame for this type of data is not likely to be significant. You have to look at longer term data. In addition, changes of less than 1% are seldom signficant.

No one can do everything they want to, not even the Extras. We must comply
with the mode regulations, special power limits in the old novice subbands,
and we should comply with the band plans.

There is no "herding" involved. The "gate" wide open.

> > >
> > What embellishment?
>
> Start off with your "Somalia operation".

No embellishment. I operated from Somalia.

Follow that up with your
> insistence that you worked the equivilent of DXCC several times over.

I'd like to see that requoted.

I've worked more than 100 DXCC entities from the CONUS, and many more
than that from Guam. I had little time to operate from HL9 and T5 and

was not even close to 100 entities from Somalia.

Had I worked for the UN, I might have left there with 40,000 QSOs like
some other relief workers that you see in QST. ;^)

> Then we can go on to your "experiences" in "emergency comms" and how

If you were "right" that often, Brain, we wouldn't be having this
conversation.

The fact is you THINK you are getting "something" right, but all
you are doing is compounding your humiliation. That's why it's
important for you to not sign your name to your posts.

S'ok by me.

> > I stand corrected. Way to go, Lennie...
>
> At least you didn't persist. This time.

Because I WASN'T right and I admitted it.

That's what seperates you and Lennie from the rest of us...

...the intestinal fortitude to do what's right when "doing what's
right" is what's called for.

> > To Leonard H Anderson...Who can't take this post to a lawyer
and

> Why do you say that he could have been a "household name" of?

Because had Lennie taken even a tenth of the energy he expells in
this forum and focused it into something constuctive, he might have
"been" something...the role model engineer he PERCEIVES himself as
being.

Unfortunately what he DID become was a discredited liar and
antagonist. His loss. No one twisted his arm to do it. The
engineering community in general and Amateur Radio in particular are
doing just fine without him.

You followed right along. Now you have the same bruised
credibility and pitiful character issues.

Sucks to be you, Brian.

You very well may have.

But then you would have had valid permission to do so and DXCC
recognition for your operation.

As it is presently, you have neither. You were a bootlegger.

Illegal.

> > Then we can go on to your "experiences" in "emergency comms" and
how

Is this a military forum?

Nice try to redirect, Brian. It's only been 18 months now...You
just now figuring out how to try and dodge this? The topic was Part 95
and part 15 devices.

And military units HAVE authorization to operate, even on
FCC-administered allocations from time to time...Even in emergencies.
(Read Part 97 lately?)

The guy has his station set up to send Bible verses 24/7.
Claims it's "code practice", and maybe it is.

The violation isn't for his on-air behavior, but for his
refusal to respond to repeated FCC requests for
information.

I've heard the guy, and I don't consider what he does to
be interference. But he should have responded to FCC long
long ago.

Check for other cities such as San Franciso and San Jose. Also check the W5YI website as they may have testing there instead of the ARRL. Also do a web search for

<city name> amateur radio

for your city and nearby cities. Then see if you can find clubs. Someone in the clubs will usually be up to date on what is available in your area.

Remember there are a total of 12 VECs in the US and so the ARRL or W5YI may or may not have a presence in your location.

Thanks Dee -- SF and San Jose too far away. W5YI doesn't show anything near by.

I e-mailed four different Eureka Ham clubs a week ago -- no answer
This is common -- many clubs don't read their e-mail for weeks.

Now e-mailing Hams in Eureka (from QRZ) direct -- waiting

Google didn't help.

Thanks for the reply

Good News!

Do you know how simple it is to go to Heaven after this life has ended?

The good news is that God came from Heaven to earth in the person of Jesus Christ over 2000 years ago and died for our past, present and future sins(misdeeds). He was born in the land of Israel supernaturally to a virgin Jewish woman named Mary. He lived a sinless life for thirty-three years and then sacrificed His sinless blood and died on a cross to pay the death penalty for our sins.

After Jesus died He rose from the dead three days later as He said He would. The Holy Bible also tells us that Jesus Christ ascended into Heaven and that all who accept Him as their Lord and Saviour will live forever with Him in Heaven where there is no more death, sorrow, sickness and pain.

The Holy Bible very clearly explains how simple it is to be saved and on your way to Heaven, "For if you confess with your mouth, "Jesus is Lord," and believe in your heart that God raised him from the dead, you WILL BE SAVED." (Romans 10:9)

You can be saved right now and on your way to Heaven if you will open your heart to Jesus and pray the following prayer:

Dear Jesus Christ, I want to be saved so that I can have a home in Heaven when I die. I agree with You that I am a sinner. I believe You love me and want to save me. I believe that You bled and died on the cross to pay the penalty for my sins. I believe that You rose from the dead. Please forgive my sins and come into my heart and be my Lord and Saviour. Thank You Lord Jesus Christ for forgiving me and saving me through Your merciful grace. Amen.

You are now a Christian if you said the prayer and allowed God to save you. Welcome to the family of God.

If you decide to wait till later you may die before you get another chance to be saved because none of us knows exactly when we will die.

This means that if we die without trusting in Jesus Christ as our Lord and Saviour we will be forever separated from the love of God in a place called Hell. This place called Hell is a place of eternal torment, suffering, pain and agony for all those who reject Jesus Christ.

Choose Jesus Christ today and you will have peace in your life now and forever.

Have a great day!

It has always been so. I got on in 1961 and heard the same garbage.

Most hams are indeed plug and play specialists. But SOME of us actually
learn something.

As with everything else, it is up to the individual.

>The pilot and his wife, Sigmundi "Moon Unit" Anderson survived and are
>helping in the recovery efforts.

The above quote is attempted satire-sarcasm by the resident hater-of-all-who-criticize-him-and-cannot-let-it-go. It is, of course,
a LIE.

The alleged "story" is simply a bad rewrite of an old "Polish joke" that surfaced over a decade ago. The original version(s) were something like this:

"A small aircraft crashed into a Warsaw cemetary yesterday. Polish authorities have recovered hundreds of bodies, are still continuing rescue efforts."

The original "story" was, of course, entirely fictitious. The original version's general writing is short, the "joke" disguised in conventional journalistic style. Just two sentences. So brief and disguised that some won't "get it" immediately. :-)

It was, unfortunately, in the societally-acceptable bigotry known as "Polish jokes" where Poles were generally depicted as ignorant, slothful, butts of sometimes cruel humor. While making fun of certain ethnic groups has always been humor in various societies, some in all societies take perverse pleasure in carrying on such bigotry and hatred to absurd lengths. The above quoted posting by "K4YZ" is one such example. If fails both sarcasm and satire from several basic errors.

Firstly, I've never wanted to go into piloting as a career. Flight in general has always been a personal interest; I'd gotten involved in learning more about radio as a young teenager flying model aircraft, as a means to recover free-flight models drifting too far away due to wind with thermal updrafts. The career choice change from art-illustration to electronics happened as a result of Army Signal Corps service exposure to communications and all its support devices. After military service, there was a brief period of interest in piloting as a recreational pastime, including personally-paid flight instruction. That interest waned on realistically examining the cost of private flying and owning one's own aircraft: Flight insurance annual premiums were approximately equal to ten percent of airframe cost in the early 1960s; a new four-place single-engine craft was the same price as a good house. Personal piloting was dropped as an avocation even though occupation continued with avionics development, particularly in radionavigation systems.

"K4YZ" failed to achieve any humor in attempting a pseudonym for my wife. "Sigmundi" wouldn't be correct even in humor. There is some similarity to "Sigismund" (see Wagner's opera "Die Valkerie" but note the gender of that character). "Moon unit" is already taken by the late Frank Zappa's daughter's given name. He could have tried something more clever, such as "Amelia Airhead," but that, I think, has already been taken.

It's been decades since I've had my hands on flight controls in a real aircraft and have no desire to do so now although all other aspects of flight remain a personal interest. Principles of aerodynamics were learned personally long ago while the principles and techniques of aeronautical electronics systems and radionavigation remain and are useful in work. I do not own (in any way) any real aircraft, have never done so.

None of the above has anything to do with amateur radio, let alone amateur radio policy. However, it was felt necessary to clear up a particular libelous posting by another ("K4YZ") who cannot seem to make any distinction between personal hatred of another and what this newsgroup's alleged subject involves. [Paul Schleck periodically sends private e-mail to "new" posters describing all of what this newsgroup is about]

"K4YZ" has charged me repeatedly with plagiarism, the stealing of already published written work. Unfortunately, he is accusing himself of such in the poor, rewritten copy of that old "Polish joke." It was not only in bad taste, but of poor comedic quality. Instead of renaming the Reuters News Service to "Rooters" (he may be subconsciously thinking of "Hooters"), a better one would have been "Rioters News Service" but that was already used several decades ago by another. :-) [the pronunciation of "Reuters" on radio broadcasting sounds like "roy-ters" (see the NBC

pronunciation guide) and the false name of "Rioters" is
closer to that when spoken, a sort of verbal pun]

If the past is any guide to the future, then "K4YZ" will once
again fail to post on subjects but continue on his odd
personal vendetta against certain individuals. Apparently
he thinks he is above criticsm (he is a 20 WPM extra!)
and will thus express OUTRAGE that anyone negatively
critiques his "writings" in here. :-)

Amelia Airhead should feed the guy better material...SNL
caliber that wasn't. :-)

One of the ham magazines did an article about some hams
tracking down a rogue automatic transmitter that would
from time to time transmit in FM audio tone Morse code
something like "JPI SUX" on a popular 2m repeater input.
The "JPI" being the suffix of the license of one of the
officials of the repeater club. Eventually the rogue
transmitter was found in a wildlife preserve desert
area. Battery operated transmitter coupled to an
auto id board and a ground plane antenna hidden in some
weeds. Hard to DF a transmitter that only fires up
at random every few hours for a few seconds. Seems they
never did figure out who done it....

Some are, some aren't. I build everything I can, and a first class
techno-weenie. Rumors of the demise of the technical ham are greatly
exxagerated!

Good News!

Do you know how simple it is to go to Heaven after this life has ended?

The good news is that God came from Heaven to earth in the person of Jesus Christ over 2000 years ago and died for our past, present and future sins(misdeeds). He was born in the land of Israel supernaturally to a virgin Jewish woman named Mary. He lived a sinless life for thirty-three years and then sacrificed His sinless blood and died on a cross to pay the death penalty for our sins.

After Jesus died He rose from the dead three days later as He said He would. The Holy Bible also tells us that Jesus Christ ascended into Heaven and that all who accept Him as their Lord and Saviour will live forever with Him in Heaven where there is no more death, sorrow, sickness and pain.

The Holy Bible very clearly explains how simple it is to be saved and on your way to Heaven, "For if you confess with your mouth, "Jesus is Lord," and believe in your heart that God raised him from the dead, you WILL BE SAVED." (Romans 10:9)

You can be saved right now and on your way to Heaven if you will open your heart to Jesus and pray the following prayer:

Dear Jesus Christ, I want to be saved so that I can have a home in Heaven when I die. I agree with You that I am a sinner. I believe You love me and want to save me. I believe that You bled and died on the cross to pay the penalty for my sins. I believe that You rose from the dead. Please forgive my sins and come into my heart and be my Lord and Saviour. Thank You Lord Jesus Christ for forgiving me and saving me through Your merciful grace. Amen.

You are now a Christian if you said the prayer and allowed God to save you. Welcome to the family of God.

If you decide to wait till later you may die before you get another chance to be saved because none of us knows exactly when we will die.

This means that if we die without trusting in Jesus Christ as our Lord and Saviour we will be forever separated from the love of God in a place called Hell. This place called Hell is a place of eternal torment, suffering, pain and agony for all those who reject Jesus Christ.

Choose Jesus Christ today and you will have peace in your life now and forever.

Have a great day!

Certainly, but that doesn't stop us from advocating that those rules be
changed. A rule that those who can't read on/off keying by ear can't
refract their signals from the ionosphere is lacking in logic of any kind.

>
> There is no "herding" involved. The "gate" wide open.

No. The gate is shut and only those who can jump over it can get in, but
jumping is purely optional once they get in. (More weird metaphors,
although I suppose I started this one).

Of course. After doing years of research deriving their own
physical characteristics of aerodynamics, trying many kinds
of physical prototypes, even building their own wind tunnel
to test lift of various curvatures of wing surfaces. None of
modern-day aerodynamics principles were available to them
and there was no such thing as "airplane engineering" and
thus no school in that from which to receive a pretty
certificate (suitable for framing).

Steven James has pretty certificates (suitable for framing)
but no vision, save for the extreme tunnel vision of those
who are Believers in the everlasting fantasy of olde-tyme
hamme raddio continuing well into the new millennium.

>> > > Oh...no complaint. Just an observation. You delve into the

I
>> > referred to him as a nurse. Get a grip.
>
>> My grip is quite firm, Brian.
>

> But you grasp the wrong things.

Poor Steven James, grasping at the straws so he can suck
up more of his libelous filth to spit on his opponents.

Actually, grasping some leather conditioner and rubbing
it into his grip would improve their carrying ability on long
trips with many baggage handlers. :-)

>> I warned you where this would go if you continued with your
course
>> of action a couple days ago.
>
>Yup. You're back to your natural form, calling people names, calling
>people liars.

Brian, think of it as "consistency." He hasn't deviated from that.

That he has deviated from civil comportment is obvious, though,
and his "go" has the consistency of libelous filth. :-)

>> And your reference ot me as "Nurse" is situational. You've
mimiced
>> Lennie's "nursie" on several occassions.
>
>Then I apologize.

Brian, there should be no apologies necessary. Certainly not by
you. Steven James had previously said you were a "pedophile"
because of leading some boy scouts.

Steven James has called you "liar" so many times that all those
added up wouldn't require you to apologize to him. The other way
around. At least in other venues.

Common civil courtesy may not exist in this newsgroup. The
PCTA Double Standard is operative here.

>> > > > You need lots of luck. You see things that aren't there.
>
>> > > It's called an "imagination", Brain...
>
>> > Indeed. You have a very active one.
>
>> Indeed I do. And I can see you sitting in the tub with a rubber

>> tugboat going "toot toot".
>
>Which I have not done. Again you persist once you've been corrected.
>I believe that is your own definition of a liar.

Brian, poor Steven James can't focus. When he does, it is only
inwards to his own imagination. Tsk, tsk.

In a previous posting, instead of the salutory "beep, beep" I've
sometimes
written (to annoy the morsemen), I wrote "toot, toot." :-) Steven
James
then takes a simple onomatopoetic word pair and manufactures a cute
little fantasy involving a bathtup and little toy tugboat, claiming
first that
I do such things (I do not)...and now yourself. He is losing his
grip on
the reality. Fantasy is more preferable to him?

The preference for fantasy is a neurosis in full flower. He can no
longer
differentiate between right and wrong in the real world, instead
placing
all on the "rules" within his own fantasy concoction. No one else
lives
in that fantasy world but that makes no difference to Steven James.

>> > > The same "imagination" you used to create all those
DXploits
>> > > you've tried to embellish your Amateur career with.
>
>> > What embellishment?
>
>> Start off with your "Somalia operation".
>
>No embellishment. I operated from Somalia.

Steven James has worked that up from your casual mention to some
full-fledged imaginary "claim of your own greatness." That's
another
sickness syndrome in evidence. His, not yours, Brian. :-)

Steven James has not operated anything from Somalia. It makes him
angry that others have done things he hasn't done. He seems to
think that everyone else is in some "contest" as to who has done
more, accomplished more, a sort of "men's locker-room brag session"
when few in here (other than himself) engage in that.

>> Then we can go on to your "experiences" in "emergency comms" and how

>> unlicensed devices play a "major role".
>
>Are military comms licensed?

Steven James should know they are not licensed in the civilian sense
of
things. However, lacking his definitive claims of actually doing
military
communications (other than normal small-unit HT use), he cannot
claim
any sort of experience of direct assignment to communications. He

will,
as was done in the past, say a lot of indefinite things of a general
nature
to avoid answering in any detail. I believe he does understand the
difficulty he would place himself in if he tried some lying about
equipment
and protocol.

He does embellish his memory considerably in regards to "unlicensed
devices playing any sort of role" in civilian emergency
communications.
That's part of his general pattern of misdirecting others to think
that you
are the one "at fault" when you were not. It's not an uncommon
trick in
computer-modem communications and he likes it...puts others on the
defensive and takes away (he thinks, mistakenly) taints put on him
by
others.

>You live in a Water Mitty kind of world.
>
>Seven hostile actions? Hi!

Agreed. "Hi" squared. :-)

Steven James cannot possibly admit at this time that he made a
small brag phrase in a somewhat long-ago message. It is a brag
and not a truth since he cannot reveal the When or Where of any
of those "actions." The best he could do is say it is some kind of
"classified" operation or of some "sensitive" nature that cannot be
revealed publicly. :-)

Further lying about those "seven hostile actions" will do no good
since U.S. military history is rather an open book with all service
branches having access to the Internet and with agencies supplying
public information in archives open to all. On the other hand,
denial
of original wrong-doing on his part will cause him to lose
self-esteem
(what Japanese refer to as "face" to the public). Never mind that
others see the deception of brag claims, he must continue to
support his own self-esteem. His fantasyworld beliefs demand it.

>> You make it just too easy to do. Why do you
>> insist on subjecting yourself to such self-humiliation?
>
>Steve, the more you type the more people see that you're nuts.

Another technique I would call "remote transference." Steven
James doesn't like to be humiliated (in any way) and thinks that
all who don't believe him should themselves be humiliated. He

wants to transfer his own feelings of inferiority to others and make them "suffer" as he apparently does. Therefore, he states that others "humiliate themselves." That's not true and others as well as non-posting readers can see that. Steven James cannot.

The outpouring of libelous filth against all who disagree with him will continue until he receives some helpful mental therapy. Until then, this newsgroup will continue as an outlet for his personal frustrations and continue to lose relevance as a forum for discussion about subjects, not the personalities of individuals..

Who is "Lennie?"

What is this "incomming artillery stories?"
[sic...it is actually 'incoming']

>
>> > What "episode"...???
>
>> Patient records are sealed.
>
> What patient records? More fiction, I see.

What are you babbling about?

Did you imagine that you actually called "authorities" to "have us
committed?" On the "strength" of your "professional qualifications"
as an LPN? :-)

If so, then you must have imagined that I was "picked up" and
held somewhere. By the "authorities" of course. :-)

Being "picked up" and in "authorities" hands implies that
some "patient records" are kept. In "secret" of course. :-)

>
>> > What's incredible is how you two can actually be so well

>> We're right more often than you'd like to think, more often than
you'll admit.
>
> If you were "right" that often, Brain, we wouldn't be having this

>conversation.

Tsk. This isn't a "conversation." No way.

It is "K4YZ" babbling a lot of libelous filth at anyone who he feels gives him opposition to whatever "K4YZ" has posted.

>
> The fact is you THINK you are getting "something" right, but all
>you are doing is compounding your humiliation. That's why it's
>important for you to not sign your name to your posts.

The only one "being humiliated" is "K4YZ" continually spewing libelous falsehoods at the person of Brian Burke or myself.

The ONLY "signatures" possible in non-binary newsgroups is the encoded type. Signatures on documents and letters in the western world require handwriting. Handwriting on a computer requires either
special, non-standardized hardware and software (not permitted here) or digitized image reproductions which require binary files (also not
permitted here).

Typing in some name at the end of a message is not required. The header information on who the sender is appears with each Internet browser output.

>
>> > I stand corrected. Way to go, Lennie...
>
>> At least you didn't persist. This time.
>
> Because I WASN'T right and I admitted it.

You have rarely been "right" about the libelous filth you throw at those who oppose you. You continually fabricate LIES about the person (and their families) of those you don't like.

In your imaginary world involving the PCTA Double Standard, you are the only one "right" and all others are "liars." Ergo, to you, you do nothing wrong...but all others can obviously see that you are doing wrong.

> That's what seperates you and Lennie from the rest of us...

Tsk. "K4YZ" shaking his little "we-we" again, presuming that all others think (and emotionally react) as he does.

> ...the intestinal fortitude to do what's right when "doing what's

>right" is what's called for.

"Doing what is right" should involve addressing SUBJECTS, not the continual heaping of libelous filth on the persons opposing "K4YZ"'s opinions.

>> > To Leonard H Anderson...Who can't take this post to a lawyer
and
>> > say "make him stop" becasue he knows who'd be proven the liar and
who'd
>> > be laughing all the way home.
>
>> Huh?
>
> "Huh" indeed. You got it.
>
> You're in the same boat and you're way past being able to
>successfully bail the thing out.

Tsk, tsk, tsk. More fantasyland thinking...poor "K4YZ" being some
kind of righteous holier-than-all-others who thinks that opposition
to "K4YZ"'s postings are "lies."

In any other venue, poor "K4YZ" would be thought nuts, demented,
the-light-is-on-but-nobody's-home whacko.

[at this point "K4YZ" will shout and holler about "nobody can call
him crazy without having 'professional medical credentials'" which
will be odd since "K4YZ" doesn't have either psychologist or
psychiatric credentials, just a Licensed Practical Nurse
certificate]

Oh, my. More libelous filth. [it never seems to stop] :-)

This isn't an engineering newsgroup. "K4YZ" doesn't have any
experience in electronics engineering (a short job as a purchasing
agent is not a "credential"), so he cannot judge anyone in that.

"K4YZ" is a licensed U.S. amateur extra...and presumes that all
radio amateurs think as he does (whenver he wants to shake his
little "we-we" statements, that is). 'K4YZ" is thus an example in
public of the off-air comportment of U.S. radio amateurs. Not a

good example unless the ARRL approves of amateurs being
granted some kind of "right" to heap libelous filth on the persons
who disagree with them.

"K4YZ" may bring up his fantasy "source" of some "now-PhD" who
worked at Naval Air Development Center and whom he "quoted"
as saying I was a bad guy there. Tsk. I've never worked in the
emply of the United States Navy and spent a few months at NADC
as an employee of RCA Corporation, representing RCA on-site to
one NADC working group and also providing technical assistance
on use of RCA designed-and-built equipment for a potential
aircraft warning system. Only three NADC employees were in
that group and all are retired. I've been in personal
correspondence
with one of them since that retirement began. "K4YZ" has never
revealed "his source's" name. He can't. He doesn't exist.

> Unfortunately what he DID become was a discredited liar and
>antagonist. His loss. No one twisted his arm to do it.

Again, a LIE by "K4YZ" which is just libelous filth. Tsk.

>The
>engineering community in general and Amateur Radio in particular are
>doing just fine without him.

More of the "we-we" shaking and another LIE about the
"engineering community." "K4YZ" never worked in any
"engineering community" nor does he have any evidence
of any wrongdoing in engineering by myself. He fantasizes
much libelous filth, wallows in it, then tries to pass it off as
some kind of "truth." There isn't any truth in it. It is LIES.

The fact of my matter is that I am still involved in electronics
engineering. I have no need to put in regular hours at that
and can pick and choose what I wish to work on. That is
normally the situation with retired engineers and that is what
I do. I am still a Life Member of the Institute of Electrical and
Electronic Engineers (IEEE) and have not compromised any
of that professional group's ethics or standards. The IEEE
has a website at www.ieee.org that may be accessed by
anyone with an Internet connection.

> You followed right along. Now you have the same bruised
>credibility and pitiful character issues.
>
> Sucks to be you, Brian.

Tsk, tsk. "K4YZ" continues to heap libelous filth on all his
newsgroup opponents. Always attacking the person of his
opponents at the exclusion of the subject matter of a news-
group. Is that the "role model" portrayal of the modern U.S.
radio amateur of the amateur extra class?

LenAnderson@ieee.org

1691. *post 101* >> GOOD NEWS! - Over 2000 years ago Jesus Christ suffered and died on a cross and rose from the dead so that we can be forgiven of our sins(misdeeds) and have a home in Heaven when this life has ended. Most people just don't know how to ask Jesus Christ into their hearts. Heres how...

Good News!

Do you know how simple it is to go to Heaven after this life has ended?

The good news is that God came from Heaven to earth in the person of Jesus Christ over 2000 years ago and died for our past, present and future sins(misdeeds). He was born in the land of Israel supernaturally to a virgin Jewish woman named Mary. He lived a sinless life for thirty-three years and then sacrificed His sinless blood and died on a cross to pay the death penalty for our sins.

After Jesus died He rose from the dead three days later as He said He would. The Holy Bible also tells us that Jesus Christ ascended into Heaven and that all who accept Him as their Lord and Saviour will live forever with Him in Heaven where there is no more death, sorrow, sickness and pain.

The Holy Bible very clearly explains how simple it is to be saved and on your way to Heaven, "For if you confess with your mouth, "Jesus is Lord," and believe in your heart that God raised him from the dead, you WILL BE SAVED." (Romans 10:9)

You can be saved right now and on your way to Heaven if you will open your heart to Jesus and pray the following prayer:

Dear Jesus Christ, I want to be saved so that I can have a home in Heaven when I die. I agree with You that I am a sinner. I believe You love me and want to save me. I believe that You bled and died on the cross to pay the penalty for my sins. I believe that You rose from the dead. Please forgive my sins and come into my heart and be my Lord and Saviour. Thank You Lord Jesus Christ for forgiving me and saving me through Your merciful grace. Amen.

You are now a Christian if you said the prayer and allowed God to save you. Welcome to the family of God.

If you decide to wait till later you may die before you get another chance to be saved because none of us knows exactly when we will die.

This means that if we die without trusting in Jesus Christ as our Lord and Saviour we will be forever separated from the love of God in a place called Hell. This place called Hell is a place of eternal torment, suffering, pain and agony for all those who reject Jesus Christ.

Choose Jesus Christ today and you will have peace in your life now and forever.

Have a great day!

>
> Who is "Lennie?"

"Lennie" would be MY "endearment" for Leonard H Anderson of Sun Valley, CA.

Lennie is a well known liar, antagonist and decietful old man who plagues USENET newsgroups of hobby groups that he's not a participant of.

> What is this "incomming artillery stories?"
> [sic...it is actually 'incoming']

Same-O Same-O.

It was a story YOU wrote to insinuate that others didn't know what it was like to be "under fire", yet your closest experience to combat is Clancy novels.

> >> > What "episode"...???
> >
> >> Patient records are sealed.
> >
> > What patient records? More fiction, I see.
>
> What are you babbling about?

"Babbling indeed". Ask your buddy. He's the one who started that...that was why I was asking HIM "What patient records..."

You gotta follow the attributes, Scummy.

> Did you imagine that you actually called "authorities" to "have us
> committed?" On the "strength" of your "professional qualifications"
> as an LPN?

I have spoke with persons in California about issues that
peripherally involve you. You can insist that I haven't, but you are
big about denial of your own.

> It is "K4YZ" babbling a lot of libelous filth at anyone who he
feels
> gives him opposition to whatever "K4YZ" has posted.

It's only "libelous" if it's not true.

> > The fact is you THINK you are getting "something" right, but
all

It's not "libelous" or a "falsehood" if it's true.

> > ...the intestinal fortitude to do what's right when "doing
what's
>
> >right" is what's called for.
>
> "Doing what is right" should involve addressing SUBJECTS,
> not the continual heaping of libelous filth on the persons
> opposing "K4YZ"'s opinions.

It's not about "opinions".

Leonard H Anderson has uttered dozens of untruthful statements in
this forum. They have been archived.

Leonard H Anderson has uses dozens of hateful, demeaning epithets
agains all others who oppose HIS "opinions" then cries "foul" when done
back to him.

> [at this point "K4YZ" will shout and holler about "nobody can call

> Oh, my. More libelous filth. [it never seems to stop]

It's not libelous if it's true.

You are not a licensed Radio Amateur.

You could have been a positive contributer to the Amateur Radio community.

You claim it's a meaningful pursuit, but you obviously hate everything about it and anyone connected with it.

You authored a few articles in a quasi-engineering level Amateur Radio journal many years ago. None of those articles ever produced a single bit of professional recognition.

You've contributed nothing to the technical development of Amateur Radio.

These are not lies.

These are statements of fact. Unless you can produce some documentary evidence to the contrary?

> This isn't an engineering newsgroup. "K4YZ" doesn't have any
> experience in electronics engineering (a short job as a purchasing
> agent is not a "credential"), so he cannot judge anyone in that.

Then if we use YOUR above statement/logic verbatim, why are YOU in THIS forum? You are not a licensed Amateur. You cannot, therefore, be any kind of a judge of what Amateurs should do or how they should do it.

> "K4YZ" may bring up his fantasy "source" of some "now-PhD" who

I can, but I won't.

You left a very negative impression on persons who ARE engineers and ARE qualified to judge. I know the other person. I've never known him to utter a single untruthful comment.

You, on the otherhand, have littered the Internet with mistruths.

You are, in a word, a LIAR.

> > Unfortunately what he DID become was a discredited liar and
> >antagonist. His loss. No one twisted his arm to do it.
>
> Again, a LIE by "K4YZ" which is just libelous filth. Tsk.

It's not libelous if it's true.

You are an antagonist.

Your "word" has been discreditied on occassions too numerous to
count.

You make statements that are not true or that you will not
substantiate with valid references.

> >The
> >engineering community in general and Amateur Radio in particular are
> >doing just fine without him.
>
> More of the "we-we" shaking and another LIE about the

No, It's not.

My statement is NOT a lie: "The engineering community in general
and Amateur Radio in particular are doing just fine without him".

Unless you can show where some major engineering program has
faltered as a result of your non-participation...???

> The fact of my matter is that I am still involved in electronics
> engineering. I have no need to put in regular hours at that

And here again you are LYING, Lennie!

Why do you insist on claiming that you don't lie, then proceed to do so in the very same post...???

> Always attacking the person of his
> opponents at the exclusion of the subject matter of a news-
> group. Is that the "role model" portrayal of the modern U.S.
> radio amateur of the amateur extra class?

I've discussed many subjects in this newsgroup, Lennie...even tenatiously. You say I "always" attack persons who don't share my views.

That is, in and of itself, yet another lie.

From a person who finds it easy to lie.

Putz.

No, it's not.

It's fiction. There's a difference.

> If fails
> both sarcasm and satire from several basic errors.

"If fails both sarcasm and satire from several basic errors"

You ought to do the proofreading thing in a sentence that lampoons
others errors, Lennie.

> Firstly, I've never wanted to go into piloting as a career.

Good thing, too. If you were as competent a pilot as you were
engineer, there'd be a smoking hole somewhere.

And those thresholds haven't changed much today if you've priced a new aircraft.

Had you continued, however, you would have had an Airman's Certificate that would have remained valid for life. You could have, then, exercised it's privileges as the opportunites arose.

> Personal piloting was
> dropped as an avocation even though occupation continued

To revive an old thread

Just read a very interesting book:
"The Victorian Internet: History of telegraph and its precursors." by Tom Standage

Fascinating reading

Any way he describes Morse code as " Bi-Signal"

I like that.

Rather than send a series of pulses (same duration) down the pike -- where one is A, two pulses is B, etc.
and get 26 pulses for Z

By using bi-signal
one short, the other long we have an efficient method of sending many letters, numbers, punctuation, etc.

This just doesn't strike me as binary.

Wahtta ya think ????

That is a much better explanation of how Morse code works than trying
to day that is is a binary method, and have to try to say that spaces
are a certain number of 0's, and dahs are 3 1's, etc.

And lest I be accused of being obtuse, can anyone give a good cite of
Morse code being defined as binary that predates the digital age?
Earlier the better. What did good Samuel MOrse have to say on the subject?

The "binary definition" is not the definition of Morse code. Rather is
is a description of how to allow a digital computer to encode and decode
the signal.

Example:

I have a flag made of four squares which in turn is a square
The first square in the upper left is black, and the last square in the
lower right is black also. The second square (upper right) is white, as
well as the third square (lower left)

It would be fairly simple to describe this large square consisting of
four smaller squares in a binary fashion. You need a cell size, an X-Y,

and a black or white state. All this in binary is not terribly difficult.

The flag however, is not binary. It is a flag. Describing it in binary fashion does not make it binary.

Lest we be tempted to do so, due to the simple nature of the example, remember that what was given was the base of digital imagery. The flag could have had all blocks of a different color, differing levels of lightness, etc.

Quite true, Alun, but that isn't the real subject for morsemen.

The morsemen insist and insist and insist on keeping the
morse test because that is what They had to undergo. If
They had to do it, then all others must do it.

U.S. amateur radio was never chartered to be a living museum of
archaic radiotelegraphy skills. There is no need to maintain any
morse telegraphic skills through federal subsidy of any kind in
this new millennium.

But, to most morsemen, having developed the telegraphy skill,
they have a bragging right to show their "superiority" in radio.
Never mind that such "superiority" is one of myth and fantasy
and exists today solely in amateur radio. Morsemen have
bought into their Belief system that the federal government Must
support/defend/cherish morse skills because that is the way
They believe.

In a few it is the fear of loss of their "greatness" in radio
(of the amateur variety) as they age. They desperately want
to preserve their status and their Beliefs that they bought
into long ago. They dare not change anything in their
hobby...such change is perceived as a threat to their
survival...so they rationalize the radiotelegraphy "need"
and bitterly condemn all who seek change.

>> There is no "herding" involved. The "gate" wide open.
>
>No. The gate is shut and only those who can jump over it can get in,
but
>jumping is purely optional once they get in. (More weird metaphors,
>although I suppose I started this one).

Alun, you didn't "start" that. You have to understand that
morsemen (and morsepersons) MUST retain all regulations as
they are now. To change them might result in loss of the
morse test andthat is something they cannot abide. Ergo,
the rationalization that LAWS MUST BE OBEYED and, by very
strong inference, those laws cannot ever be changed!

Of course laws must be obeyed. There would be no reason to
have them if they weren't. However, there is NO reason to
prohibit CHANGE of law by established, rightful democratic-
principle action. However, CHANGE is anathema to
morsepeople for, if some laws on amateur radio are changed,
then the morse code test necessity might be changed.
They can't have that.

So, there is this self-righteous insistence on "legality" of
obeyance and the rejection (an illegality itself) of the
ability to change law.
[by any means possible, apparently...:-)]

Oh you have to read "The Victorian Internet: History of telegraph and its precursors." by Tom Standage
Describes Optical "telegraph" with panels and relays from hill to hill.
There were over a thousand in use all over Europe before the electric telegraph
Today a vestige of those days is several "Telegraph Hills" scattered over Europe.

> It's fiction. There's a difference.

It is a LIE. Worse, it is bad humor.

However, little Steven James throws an angry tantrum, waving his fists and crying piteously to the adults around him. Few liked his kind of childish "humor."

> "If fails both sarcasm and satire from several basic errors"
>
> You ought to do the proofreading thing in a sentence that
lampoons
>others errors, Lennie.

Tsk, tsk. The angry little Steven James cries and cries some more, "blaming" all others for not seeing little Stevie's "humor" which was nothing more than the usual libelous filth outpouring from a kid who can't take the heat of discussing subjects.

>> "K4YZ" failed to achieve any humor in attempting a pseudonym
>> for my wife.
>
> The lack of humor comes from your lack of respect for her acting
>the way you do in public.

Tsk, tsk. Another LIE in the heap of libelous filth babbled by little Steven James. In public.

Someone should pick up the 'phone and have little Steven James
picked up by "authorities" so that his vileness can be corrected
and his behavior disciplined. Perhaps another LPN can exercise
such "authority?"

<snip of little Steven's exhibitionism of private behavior>

> Neither does your Army career, your wife's alleged education and
>licensure, or your flirtation with aviation. But you never pass up a
>chance to enthrall us with those subjects as your will takes you.

Poor baby. Still throwing the tantrum.

I've not "enthralled" anything or anyone by mentioning what I've
done in the past half century involving radio and electronics. I
did
them and have references which include living individuals (at least
three of them are licensed amateur extras) who were also there
and can corroborate what was done.

Another PCTA extra in here repeatedly quoted (not verbatim)
a major league baseball player's statement "It ain't braggin if
ya done it!" Tsk, I've done it and it isn't bragging.

>> "K4YZ" has charged me repeatedly with plagiarism, the
>> stealing of already published written work. Unfortunately, he
>> is accusing himself of such in the poor, rewritten copy of that
>> old "Polish joke."
>
> So far, you've not proved any of my allegations as inaccurate.
>It's been several years.

More LIES by little Steven James.

No one can disprove something that doesn't exist.

However, little Steven James' "allegations" are terribly
inaccurate, being nothing more than angry tantrums blurted
out of a need to libelously label opponents' comments as
"lies" when he hasn't done the equivalent.

Little Stevie is welcome to go through each and every article
I've written in the past half century and show (with proper
work) where this alleged "plagiarism" was done. That will be
only about 9 periodicals, each having a production staff that
has read the original manuscripts, the proofs, and corrected
proofs (if needed) sent back, plus the page make-up sheets
prior to printing. At roughly 3 people per staff, that would be
roughly 27 others who approved what went into print. Be
mindful that all 9 periodicals also had legal representatives
who did not want any civil-suit plagiarism charges brought
against those periodicals. On top of that, angry little Stevie
has to check all subsequent issues of each periodical to
review corrections printed about my past articles, including

reader allegations of "plagiarism." To save him the time of searching (which he can't do), he should know that there were none.

Miraculously, little Stevie NOW claims that I "copied all of it from others!" That is utter nonsense. Little Stevie has NO such proof, no such references, just a blanket general statement which is one more filthy little piece of the trash he hurls at those who oppose him in public. Poor baby.

> "I am laughing at the superior intellect".

Those who have no intellect should not complain or try to bluff their way through anything.

You "have spoke?" Does that mean you are a wheel?

Angwy widdle Stevie is babbling again in generalities,
nothing specific.

Who are these "persons in California?" Are they groups
or individuals? What identification can you give about
them? Are you going to refuse to identify them again?

What are the "issues?" What do they involve? How do
they "involve" me?

Widdle Stevie is BLUFFING again. Nothing specific was
said by him, yet he wants to imply badness of some kind.

No one can confirm or deny something that isn't identified.

>> It is "K4YZ" babbling a lot of libelous filth at anyone who he
>> feels gives him opposition to whatever "K4YZ" has posted.
>
> It's only "libelous" if it's not true.

Nearly all of what widdle Stevie posts claiming others are
"lying" is itself a LIE.

> It's not "libelous" or a "falsehood" if it's true.

Widdle Stevie's libelous charges are untrue, false, nothing
more than uncontrolled temper tantrums from someone
who cannot concentrate on subjects but must hurl trash
at the person of those opposing his opinions.

> It's not about "opinions".

In reality it is.

Stevie should understand that his fantasyworld ideas and
rules do NOT apply to reality. His "definitions" of "right and
wrong" are NOT universal and are purely defensive reflexes
on his part against those who disagree with him.

> Leonard H Anderson has uttered dozens of untruthful statements in
>this forum. They have been archived.

Poor baby. Still angwy at discovering that PCTA extras can
NOT hurl libelous filth at NCTAs or those that disagree with
your concept of "right and wrong?"

Tsk, there ought to be LAW, ey? :-)

Oh, my, but what widdle Stevie thinks is a "comeback" is going
to come back and bite him...HARD. Stevie's libelous filth
outpourings against others are ALSO archived!

Sunnuvagun!

> Leonard H Anderson has uses dozens of hateful, demeaning epithets
>agains all others who oppose HIS "opinions" then cries "foul" when
done
>back to him.

Poor baby Stevie. Can't handle it on newsgroups? :-)

No problem to widdle Stevie...he's a PCTA *extra* and can do
anything he wants in here! Call others names (like "Putz") and
say those are "true" (when they aren't)!

Tsk, tsk, tsk...an alleged ex-marine who can't handle "hostile
(verbal) action!"

Temper fry...

> I don't have a "Licensed Practical Nurse certificate".

No longer? Tennessee take yours away? Aw, too bad...

> It's not libelous if it's true.

It's not true. Ergo, it is LIBEL.

> You are not a licensed Radio Amateur.

Never claimed to be one. :-)

> You could have been a positive contributer to the Amateur Radio
>community.

That would be a change...from all the negative contributors
who insist on keeping U.S. amateur radio in some kind of
time stasis circa 1930's standards and practices. :-)

But, I'd feel safe in predicting that widdle Stevie would
continue to throw tantrums and hurl libelous filth at all
who oppose his opinions in here. :-)

> You claim it's a meaningful pursuit, but you obviously hate
>everything about it and anyone connected with it.

Sigh...poor widdle self-righteous Stevie thinking that all
of amateur radio agrees with Stevie's concept of ham
radio. Anyone "hating Stevie" MUST "hate all of ham
radio!" :-)

> You authored a few articles in a quasi-engineering level Amateur
>Radio journal many years ago. None of those articles ever produced a
>single bit of professional recognition.

BwahahahahahahahahahHAHAHAHAHAHA!!!!!!!!!!!!!!

Poor widdle emotional Stevie...thinks it is all about
"recognition" and respect and, most of all, adoration!
:-)

"Professional recognition." Professionalism is about
doing work for pecuniary compensation. (those with
poor vocabularies can substitute 'monetary' for
'pecuniary') Tsk, tsk, tsk...all of the publications I
was printed in (there are 9 of them) "recognized" it as
such and I was PAID for them. Not only that, but the
IRS and California Franchise Tax Board also
"recognized" it as such!

Sunnuvagun!

> You've contributed nothing to the technical development of
Amateur
>Radio.

I haven't? :-)

What has widdle Stevie "contributed to the technical development
of amateur radio? Sitting in ham newsgroups and hurling libelous
filth against all who oppose him? :-)

Define "technical development" in radio, oh mighty radio guru!

Show us your work, your brilliant developments of buying ready-
built equipment and building "weekender" projects from articles
in ham magazines...no doubt all full of amazing technology
never before seen, ey? :-)

> These are statements of fact. Unless you can produce some
>documentary evidence to the contrary?

"Documentary evidence?" You mean like information printed at
a rate of 50,000 copies a month in some periodical? Or be a
footnote or endnote in some other paper or document?

Imagine poor widdle Stevie ending up as a mere footnote in
some article. [a podiatric medical journal would be suitable?]

> Then if we use YOUR above statement/logic verbatim, why are YOU
in
>THIS forum?

Does widdle Stevie have both short-term and long-term memory
loss? :-)

I'm here as part of an advocacy to remove the morse code test
from U.S. amateur radio license examinations. As part of that,
there are all those other libelous filth-hurlers best
identified as a group known as the "PCTA extras" who want to
silence me. As a result, most of my replies are in regards to
refuting all that libelous filth tossed at my person. :-)

>You are not a licensed Amateur. You cannot, therefore, be
>any kind of a judge of what Amateurs should do or how they should do
>it.

NOBODY can tell widdle Stevie what to do in ham radio! Nobody!

:-)

>> with one of them since that retirement began. "K4YZ" has never
>> revealed "his source's" name. He can't. He doesn't exist.
>
> I can, but I won't.

BLUFF. Bullshit. You fabricated that "source." A LIE.

> You left a very negative impression on persons who ARE engineers
>and ARE qualified to judge. I know the other person. I've never
known
>him to utter a single untruthful comment.

Tsk. Must have been one of your other personalities! :-)

Which one of those was it?

> You are an antagonist.

Yes. I dislike the existance of the morse code test!

Did you finally come to that conclusion, Stevie Einstein?

:-)

> You make statements that are not true or that you will not
>substantiate with valid references.

Poor widdle Stevie...he MUST have long-term memory loss
also! He forgets a short list of professional employers made
in here more than once, the names and callsigns of licensed
amateurs whom I know, the links and other third-party
references made in here to documents, directives, and
regulations.

Poor Stevie, all confused again as to what is "right or wrong"
and personal fantasy versus reality. Thinks all who oppose
his opinions are "wrong," "liars," "untruthful," etc., etc.

Widdle Stevie is nutso.

Yeah, for me too! 6 months of daily studying, one failed test, and
finally passing it. I think that my brain processes audio differently
than does those people with normal hearing.

> If it wasn't a hazing process, then I'm a Dutchman

Don't take it personally! Some people learn Morse pretty easily, and
for some it is hard. Is it a hazing process if it is easy? Same goes for
the writtens.

I can assure you that no group of Hams ever sat down and said "Let's
give this Coslo guy a rough time and make him learn Morse code".

That would certainly be an interesting outlook for a person. Let us say that a person became a ham in 1994, and has a combined intense interest in operation below 30 MHz, and deep seated conviction against Morse code testing, leading to refusal to take the Element 1 test.

Somehow doesn't ring true.

I think that those who want to get rid of Element one testing would be better off to not try that argument.

That would be reminiscent of the old "Jump Frog" joke!

An argument can be made that no one should be tested at all.
Freebanders do it all the time. All rules are arbitrary.

But somewhere, somehow, a group of people decided that those were the
rules. Those rules came from rules that were in force previously. The
rules change constantly. That's a fact.

One of those changes 10 or so years ago was to give access to *most* of
our allotted frequencies to people without having them take a code test.
Also a fact.

This has had mixed results. Also a fact.

Possibilities:

Removal of the Morse code test has made the testing process easier.
This has allowed people who have only a passing interest in Ham radio to
get their license. Passing interests pass, and they allow their licenses
to lapse.

The Morse code tests are so hard that the No-code Technician either
becomes so discouraged that they quit, or their convictions are so
strong that they would rather not be a Ham than take the Element one test.

You can decide for yourself which sounds more likely.

>
> Somehow doesn't ring true.

It was true enough of me, although I became a no-code ham in 1980 (in the UK), more or less in defeat at having tried unsuccessfully to learn Morse code ever since 1970, and passed a code test in 1992.

Getting a no-code licence was something I only did because I was resigned to not getting the HF access that I wanted. It was a case of thinking it was silly to stay off the air altogether just because I couldn't get on HF, and it took me a long time, i.e. 10 years, to grudgingly reach that conclusion.

Eventually passing the code test was helped by software that didn't exist back in 1970, and the help of dear friends who took turns to send slow CW transmissions several times a week that I knew were being done mainly just for my benefit. Sure, others tuned in, but they stopped sending them when I passed! I owe them a great deal.

Here's another interesting fact. I was teaching ham radio classes for years before I passed the bleeping code!

If none of this rings true, I can assure that every word is the truth.

As I said, all of this has been posted here before, but not recently. My own history hasn't proved as effective as an argument as simply pointing out that none of the arguments in favour of retaining code testing hold as much water as a leaky bucket!

Why? To hide an archaic communications means in high-tech
bafflegab? :-)

>> Just read a very interesting book:
>> "The Victorian Internet: History of telegraph and its precursors."
by Tom
>> Standage

Anyone can get a history of "telegraphic" means of
communications in the first chapter, Part A, of
"Principles of Telegraphy (Teletypewriter)" NAVSHIPS
0967-255-0010, June 1967. The "author" is the
Department of the Navy Electronic Systems Command.
It is a training text. Part A (historical background) has
nice pictures courtesty of the Smithsonian
Institution (for those who find schematics and
electronic diagrams too complex...).

A better explanation of the codes involved in ALL
telegraphy is given at:

http://www.wps.com/projects/codes/index.html

That was done by Tom Jennings, a licensed ham. :-)

>> Fascinating reading
>
>> Any way he describes Morse code as " Bi-Signal"
>
> That is a much better explanation of how Morse code works than
trying
>to day that is is a binary method, and have to try to say that spaces

>are a certain number of 0's, and dahs are 3 1's, etc.

The "bi" prefix in 'binary' means TWO. Webster's New World
defines "binary" as -

"1. made up of two parts; double

"2. designating or of a number system in which the base
used is two, each number being expressed by using only
two digits; spec. 1 and 0."

> And lest I be accused of being obtuse, can anyone give a good
cite of
>Morse code being defined as binary that predates the digital age?
>Earlier the better. What did good Samuel MOrse have to say on the
subject?

In 1844 he wrote on the paper tape of the first Morse-Vail Telegraph
message which is both quoted and shown on Jennings' website.

> The "binary definition" is not the definition of Morse code.
Rather is
>is a description of how to allow a digital computer to encode and
decode
>the signal.

Sorry. By definition, the on-off telegraphic code has only TWO
states.
Ergo, it fits the definition of the word "binary."

It would seem you wish to enshrine "morse code" as some kind of
"non-computer" having some kind of intrinsic power/majesty/grandeur
all by its lonesome. While that's nice, it is merely a cult
definition by
believers who've been taken in by old Morse Myths. A telegraphic
code has only two states.

> The flag however, is not binary. It is a flag. Describing it
in binary
>fashion does not make it binary.

Telegraphy is NOT a flag, no matter how much you wave away. :-)

As HF radio amateurs use it, "CW" (the colloquial meaning of
on-off keying of a carrier using International Morse Code) is simply
two states: Carrier on; carrier off. Two states. Binary.

"CW" was the only way the first primitive radios could be used
for communications. "First" only because it was the only
practical means that could be applied to that primitive
technology. Not a problem for two reasons:

"Morse code" was already a mature communications code by
1896 and the first demonstrated "radios" in Italy and Russia.
In the 52 years since the first Morse-Vail Telegraph message,
the wired telegraph (generally based on the Morse-Vail pateneted
"relay system") had spread worldwide and developed many
"dialects" of codings to fit languages other than English. The
signal itself was of only two states, on or off.

The printing telegraph or teleprinter was already in use in
1896 and such innovations were slowly downsizing the
manual telegraph operators. There was then (1896) a "pool"
of manual telegraphers who could transfer their skills to the
then-new technology of radio. As on-off keyed radio was

rapidly adopted by the maritime world (which did not have any means of quick, over-the-horizon communications), the downsized manual telegraphers were hired on by the new "wireless" communications groups and the Morse Myths grew out of a need of these old brass pounders to gain new self-esteem as "pioneers."

On-off keyed CW still has only two states: Carrier on; carrier off. Binary.

You appear to want to divorce yourself from the possibility that a "machine" (a modern computer) can successfully decode a morse signal into a written language text form. However, I've seen a demonstration (and supplied the signal source for) of a self-adjusting-for-rate-and-spacings decoder program that morse worked. [this was witnessed by two othes who were skilled in "CW" operation]

Since modern computers internally operate using only two stable states with their signals, those are generally termed as operating in binary. But, "binary" is NOT exclusively for computers or even digital logic devices. "Binary" means "having two states" of something; e.g., carrier on or carrier off. There was some interest in the digital hardware field of using a trinary signal (three actual states for a signal) but that disappeared after a few years of papers.

You can argue until blue in the face, but morse code is NOT magical, endowed with some "superior" whatever. You can bring out all the OLD, trite, worn-out aphorisms saluting morse since the 1920s and 1930s and all you are doing is bring out old, outdated, obsolete rationalizations which don't apply to the modern times. On-off keyed CW still has only two states, thus it fits the "binary" definition.

If you want to be a champion retro-comm "superior," I'd suggest you find someone with a time machine to transport yourself back about 70 years and demonstrate your skills there, when morse code was actually a mark of a good "radio operator." Or be a licensed ham radio pro-code braggart. Binary choice. :-)

That is quite a long time. What was the reason that it took you 22
years? My reason was hearing problems, and a presumed mental processing

of sound deficit.

What was the total study time?

I believe you. And you didn't do what my hypothetical Technician did
either. You kept with it an eventually passed

Except here is what I see as the difference. You had difficulties with
Element one, and so did I. You want the test eliminated because you had
a hard time of it. I don't want the test removed just because of my
personal trouble with it.

We all have walls to climb in life. Some peoples walls are higher than
others. I'll climb my own walls, and not try to change everyone elses
walls. YMMV.

I had enough problems that it was no joke to me either. But my point
wasn't about the test specifically, it was the conclusion that people
reach regarding Morse code testing and the people coming into or leaving
the ARS.

Just so you know what the joke was about:

A scientist was conducting an experiment.

He took a frog, and sat it on the floor. Then he said:

"Jump, frog, Jump!"

The frog jumps 6 feet.

The scientist writes in his notebook *Frog with four legs jumps 6 feet*.

Then he cuts off one of the frog's legs...

"Jump, frog, Jump!"

The frog jumps 4 feet.

The scientist writes in his notebook *Frog with three legs jumps 4 feet*.

He cuts off another leg.

"Jump, frog, Jump!"

The frog jumps 2 feet.

The scientist writes in his notebook *Frog with two legs jumps 2 feet*.

Then he cuts off the third leg.

"Jump, frog, Jump!"

With a mighty struggle, the frog jumps 1 feet.

The scientist writes in his notebook *Frog with 1 leg jumps 1 foot*.

Then he cuts off the final leg.

"Jump, frog, Jump!"

The frog just sits there.

"Jump, frog, Jump!"

The frog still just sits there.

The scientist writes in his notebook *Frog with no legs is deaf.

Good grief old chap -- your response is overwhelming - totally
You are right
I am wrong
I hereby join you in your noble crusade
Now all we have to do is get all them durn Morse coders off the air
Any Ideas ???

kind.
>
> An argument can be made that no one should be tested at all.
>Freebanders do it all the time. All rules are arbitrary.

That's an absurd counter to what Alun said.

NO ONE was talking about "freebanders."

NO ONE was talking about "no test at all."

Alan spoke of the equally-absurd notion by some that
personal radiotelegraphy skill "enables" operation of
radios on HF. Absolutely NO qualification for such a
thought held by many control-freak morsemen in ham
radio. There's NO such "enablement" except in the
emotional fantasies of some.

The talk was of the MORSE CODE TEST, not the
written tests. Try for some semblance of focus.

> But somewhere, somehow, a group of people decided that those
were the
>rules. Those rules came from rules that were in force previously. The
>rules change constantly. That's a fact.

Those "facts" have little to do with this so-called
technical necessity to personally know morse in

order to make an HF or MF transmitter work. Tens
of thousands of "radio operators" ranging from
military to civilians have successfully operated HF
radios without possessing any ability to do morse
code. For years. Worldwide.

> One of those changes 10 or so years ago was to give access to
most of
>our allotted frequencies to people without having them take a code
test.
>Also a fact.

Not quite correct. The Report & Order establishing the
no-code-test Technician class U.S. amateur radio
license went into effect in 1991. That's over 13 years
ago. A fact.

Those Technicians were NOT allowed any privileges
below 30 MHz, also a fact.

The Technician class license was the fastest-growing
class in U.S. amateur radio (among all classes) from
1991 to the recent Restructuring. A fact. One that the
morsemen are loathe to discuss; if not "loathe," then
they are generally hostile to that concept. :-)

> Removal of the Morse code test has made the testing process
easier.
>This has allowed people who have only a passing interest in Ham radio
to
>get their license. Passing interests pass, and they allow their
licenses
>to lapse.

Oh! Tsk, TSK! What sort do these newcomers
encounter when entering amateur radio as newbies?
They meet some angry olde men of morsemanship
babbling absurdities of how "superior" they are
because they can do high-speed radiotelegraphy
and that (according to them) defines "real hams."

"No-coders" are shunned by those olde morseaholics,
regarded as second-class sub-humans who are said
to be "stupid" because they can't or don't develop the
psychomotor skills necessary to emulate a morse
modem. Those self-righteous macho-wannabe
morsemen simply don't understand that the hobby of
amateur radio was never defined solely for
radiotelegraphy.

Meeting the bitterness and social pariahdom imposed
by those self-righteous morsemen would make ordinary
hobbyists look elsewhere for fun. There are many, many

different kinds of hobby fun elsewhere.

> The Morse code tests are so hard that the No-code Technician
either
>becomes so discouraged that they quit, or their convictions are so
>strong that they would rather not be a Ham than take the Element one
test.

Oh, my, the "conviction to the 'cause'" and
"dedication to the ham community" is an intrinsic
part of being a "real" ham?!? Tsk, another self-
righteous emotional personal concept which has
NO basis in reality.

Ah, yes, one can almost picture the NOS "recruiting"
posters and aphorisms springing up about "Learn
Radiotelegraphy to Join 'The Service'!!!" Outdated
garbage phrases left over from the 1930s... :-(

> You can decide for yourself which sounds more likely.

Tsk, tsk, tsk. "Loading" a "reason?" That's absurd and
illogical.

The ONLY thing tangible about this stupid necessity to
pass a morse code test is the hate and bitterness of
the olde morsemen who bitch and whine about "no-
coders" who weren't "man enough" to Do As They Did.

Please explain the "rules" involved in "showing commitment"
to this "amateur community" and what special non-FCC
forms have to be submitted to "gain approval"? And just
who rules on this alleged commitment and dedication?

>>>There is no "herding" involved. The "gate" wide open.

Mama Dee, you know very well the regulations were made
to favor the olde morsemen. Guess who lobbied for that?
:-)

>> No. The gate is shut and only those who can jump over it can get in,
but
>> jumping is purely optional once they get in. (More weird metaphors,
>> although I suppose I started this one).
>
> I pounded and pounded and pounded that key until I broke the
gate
>down.......... (yoiks) 8^)

Tsk, tsk, tsk, Coslo. You just do NOT understand what
that "gate" is. You capitulated to the olde-tymers, bought
into the system, became an "extra" so that you could lord
it over other, lesser-class amateurs (the seeming norm among
the extras, particularly the NCTA extras).

The olde-tyme morsemen in hamdom wanted their private HF playground where they could pose and posture and otherwise carry on like the "superior" radio operators they thought they were. So, the original 5 WPM morse test rate was upped and upped until, years later, the 20 WPM morse test defined the "extra" class.

If you wish to redefine U.S. amateur radio as the Archaic Radiotelegraphy Society (ARS), feel free. Champion morse code all you want. Lobby to keep the morse test so that you will have some new playmates (maybe) in your radio playground for your later years. Feel "superior." In the new millennium only amateur radio uses morse code for communications; all the other radio services that once used morse have dropped it. The maritime radio users have voice and data as their major modes of open-ocean radio communications...the olde-tyme "sparky" is almost extinct. Keep watching as attrition and very few newcomers make ham radio (as you know it) become equally extinct.

Just who are you replying to, "Caveat?" Me?!?!?

"You tawkin ta me?!?"

The United States Army "helped me" in 1952, then
from 1953 to 1956 assigned to the 3rd largest ACAN
(Army Communications Administrative Network) HF
station in Tokyo. TTY, RTTY, and voice were the only
modes used on 43 transmitters whose power outputs
were 1 KW to 40 KW. MY "elmers."

I "got on the air" on HF the first time in February 1953,
haven't needed any morse code skills or knowledge
in any military or civilian or government communications
systems since...in the EM spectrum from VLF on up
into microwaves topping out at 25 GHz...in RF places
the U.S. hams can only dream about since they are
stuck with bands above 1.6 MHz.

Tell me ALL about how ham morsemen are NOW "pioneering
the airwaves" using morse code on HF now!

BWAHAHAHAHAHAHAHAHAHAHAH!!!!!!!!!!!!!!!!!!!!!!!!!!!!

[want more Robert DeNiro impressions? just ask...]

> On-off keyed CW still has only two states: Carrier on;
> carrier off. Binary.

Now describe the carrier on state and carrier off state as how it
relates to the long and short duration state.

Explain how if the carrier is off, and that describes the "0" state, and
then when the carrier is on, and describes the "1" state, the duration
can be described in only a 1 or a 0?

Dit is "1" and Dah is "1"?

It can easily be described by translating it into binary numbers, however.

> You appear to want to divorce yourself from the possibility
> that a "machine" (a modern computer) can successfully
> decode a morse signal into a written language text form.

Incorrect. The Morse code signal can pretty easily be translated into a
digital signal It is done by assigning binary numbers to the various
states you would encounter in the CW signal by the timing of the 0 and 1
states.

> However, I've seen a demonstration (and supplied the signal
> source for) of a self-adjusting-for-rate-and-spacings decoder

Yeah, I have a program on my computer that does the same. CWGet. Really
a pretty good program.

He is a broken man.

Blames the world.

Singles out a couple of people.

> >> And your reference ot me as "Nurse" is situational. You've

I hold myself to a higher standard. I do not recall calling Steve
"Nursie" but if I have, then I am sorry for that.

But it truly is a stretch to compare being called "Nursie" with having
been called a homosexual and a pedophile. Nor have I suggested that
anyone on this group be visited by thugs who "throw rocks through
windows, slask tires, and terrorize people's wives." Steve is truly
dispicable. I don't have to live with that kind of public behavio[u]r.
He does. My conscience is clean.

> Steven James has called you "liar" so many times that all those
> added up wouldn't require you to apologize to him. The other way

> around. At least in other venues.

I can't keep count. Honestly.

Suffice it to say that he will forever be known as the "Ham that cried 'Liar, liar, pants on fiar'" or wolf or something like that.

> Common civil courtesy may not exist in this newsgroup. The
> PCTA Double Standard is operative here.

I don't believe much courtesy exists here. Funny because it is sticky sweet on the air, and all these fb gentlemen claim to be hams.

session"
> when few in here (other than himself) engage in that.

Guys like him are always keeping score, and in this case, I can guess
that he thinks he just doesn't measure up. What makes him even more
furious is that I just don't care.

> >> Then we can go on to your "experiences" in "emergency comms" and
how

be
> revealed publicly. :-)

That's the usual MO for military fakers. Surprised he hasn't claimed
to be a Navy Seal, a sniper, or Medal of Honor winner, though he does
trot out a box of medals that he didn't earn.

> Further lying about those "seven hostile actions" will do no good

> (what Japanese refer to as "face" to the public). Never mind that
> others see the deception of brag claims, he must continue to
> support his own self-esteem. His fantasyworld beliefs demand it.

Instead of accepting "loss of face," he commits "tora, tora, tora."
Mas misdirection.

> >> You make it just too easy to do. Why do you

There's the lying, the name calling, and the yiddish reference to the
male anatomy again.

You're fixated on the male genitalia.

Back to civil discourse. Sayonara.

Hello, Len

1.6 MHz is in the American AM broadcast band. 1.8 is the bottom end for hams and it is *not* hf, it is mf (medium frequency).

As to lf (low frequency) and below, it is quite difficult to construct an antenna with anything that could be described as efficient. The folks experimenting on lf are probably using an antenna with far less than 1% efficiency.

Morse does work, despite some folks hating it. I can take it or leave it (I have enjoyed it, but am stuck on 28 MHz and above and the stupid radio on 28 does not have cw capabilities. I don't have a problem with modest cw speeds, however. Anything below about 35 is fine for me now; give me a month or so to get back up where I used to be should I manage to get back on

hf with a decent radio LOL).

Hello, Phil

I'd have given anything to see those folks monitoring KG6AAY that day I found out they (the U.S. Navy) monitored *everything* transmitted at the ham shack on the U.S. Naval Communications Station on Guam. One of the guys asked what the heck I was doing (he told me about the monitoring, I had consumed several "beverages" - read "beer" - and I was at the low end of 40). I told him I was calling CQ. He said "That's not CQ". I assured him it was - in American Land-Line Morse. Of course, after the initial call sign was sent, I purposely slowed down and sent "KG6AAY" slowly in International Morse.

Lo and behold, an old-timer came back - in American Morse.

When the other guy realized what I was doing, he started laughing. The tears were streaming down our faces. We chatted for half an hour. I'd love to guess how long those guys poured over those tapes figuring out what secret message I was sending.

The Navy removed the refrigerator (and beer) within a week .... :))

N9OGL ADVANCE PACKET NETWORK

The Advanced Amateur Radio Packet Network (AARPN) will NOT be setup like the known packet system. The network will be set up like this; One centralized node will serve a community and the surrounding area. An amateur opeator would click on a Peer to Peer (P2P) icon on their computers and it will connect them to the centralized node. An amateur would then would type in the search engine in the P2P software what they are looking for like a Icom for sale or a tech manual. This system has a huge advantage over the old system. first it would be operating at 1 to 11megabits per second. Second there would be no fowarding because if you have something to sale like a radio, you can but a little description and put it in your share file folder.Or a tech manual you would also put it in your share file folder. The centralized node would be hooked up to the internet and the internet would be used as a high speed "backbone" systerm. This in turn would connecting all the radio nodes together. Other applications like email, chat and later virtual reality programs could be used. Girly you say, well I would this system over any system. Like I said you whiney like bitch whore I fucking dare you come up with something different.

behavio[u]r.
>He does. My conscience is clean.

Well, two more things are operative there. Firstly, he may not
be aware of the differences in his vile name-calling...it seems to

all the same with him...he probably doesn't realize it. Secondly,
he could be sociopathic and simply doesn't care about what he
says in here...it vents his rages and so he feels better. The
second syndrome is the worst of the two for everyone else.

Either way, he presents an undesireable image of U.S. amateur
radio to everyone else.

>I don't believe much courtesy exists here. Funny because it is sticky

>sweet on the air, and all these fb gentlemen claim to be hams.

Some of the newsgroup correspondents just haven't learned
to handle themselves in newsgroups or public boards or
whatever. Some of them feel immune to criticsm becasue no
one can reach out through time and space to physically harm
them, so they toss civility out the window. That's fairly common
on all computer-modem venues.

>> Brian, poor Steven James can't focus. When he does, it is only
>> inwards to his own imagination. Tsk, tsk.

He typically goes into outrage at anyone having experiences
he doesn't have. Envy cubed. He can't stand it!

>Guys like him are always keeping score, and in this case, I can guess
>that he thinks he just doesn't measure up. What makes him even more
>furious is that I just don't care.

I don't think he understands that. He gets all tangled up
between people, what they said, etc., then says they were
"showing off" when a simple casual mention of personal
experience was stated. An example is my mention of
doing real HF communications in the Army a half century
ago in regards to the Army (and other branches) NOT
using "CW" in long-haul message traffic. The Lost Action
Hero morphed that mention into some kind of "bragging"
of mine...not understanding that I actually did what I said
and can prove it with personal references. :-)

He isn't reading these postings with rose-colored glasses. His eyes
are red with rage and cannot discern what was written. :-)

He just can't come to terms with some of us have more experiences
and/or more unique experiences than he had. That makes him
defensive. In defense he tries a misdirection attack, trying to
shift
a thread direction...or he fabricates things which he never did.

>Attack, attack, attack. Tora, tora, tora.
>
>But it's no surprise. No December 7. It's everyday.

It's his notable posting manner. Uncivil but characteristic.

to admit weakness of any kind.

> He wants to transfer his own feelings of inferiority to others and

> make them "suffer" as he apparently does.
>
>He does suffer. It's no longer an excuse for his behavio[u]r, if it
>ever was.

Makes no never mind on his side of the screen. He is alone
with the monitor and feels invulnerable...no one can touch
him! So, he goes ballistic with all the libelous filth he can
type as a "response" to someone with an opinion opposite
to his. He HATES some folks. Really HATES them. Tsk.

>> Therefore, he states that
>> others "humiliate themselves." That's not true and others as
well

>> LenAnder...@ieee.org
>
>My guess is bi-polar.

Hmmm...I don't think we can talk "bi" anything. Coslonaut says
that on-off keying CW doesn't have just two states, but many
many of them. Therefore it isn't "binary." With his multiple
personalities, the Lost Action Hero could be classified as
"MULTI-polar!" :-)

Just the same, the Lost Action Hero is an example of modern
U.S. amateur radio extra class licensee. If the general public
bothers to look in here, they would think extras are fruitcake.

> Tell us which state is the short or Dit, and which state is the
long or
>Dah?

Apparently no one can tell the Coslonaut anything. :-)

Tsk. You don't realize that "time" does not enter in to the
definition. Having two STABLE states is binary. Time is not
stable.

If you used "time" in a state definition, then OOK CW would
an INFINITE number of states.

>It can easily be described by translating it into binary numbers,
however.

Sorry, you lost again. Putting "time" into the picture, you have
an INFINITE number of states. BINARY numbers are just two
states. By definition.

In my MS FORTRAN 5.1 Compiler the closest I can come to Infinity
(to represent the variation in "time state" duration) is 10^308 and
requires 64 bit words (Real*8 or Double Precision) to do it. Sorry,
but that cannot possibly be done "easily." :-)

> You appear to want to divorce yourself from the possibility
> that a "machine" (a modern computer) can successfully
> decode a morse signal into a written language text form.
>
> Incorrect. The Morse code signal can pretty easily be
translated into a
>digital signal It is done by assigning binary numbers to the various
>states you would encounter in the CW signal by the timing of the 0 and
1
>states.

Nooo, Mikey. :-) You can't effectively "store" a "varying length
binary" quantity. Such be FIXED in the number of bits per binary
word.

You fail in considering that the RATE of characters varies over
a near-infinite range..."infinite" in the sense that On-times have
a variation and granularity of the time differences (not
"quantization"
which would apply to other things such as D-to-A conversion)
have to be pinned down.

Once you have some system of RATE, then you have to add some
kind of adjustability to account for non-Farnesworth and Farnsworth
character rates in regards to morse words per minute.

How do you store a long pause between morse characters? :-)

In trying to win message points here, you have stuck yourself with
indulgence into some weird kind of wordplay that is nonsensical.

Let's review:

On-off keying CW has just TWO states: Carrier On; Carrier Off.

Wired telegraphy has just TWO states: Loop current On or current
in one direction; Loop current Off or current in opposite direction.
[the latter is called "polar keying"]

Light blinkers have just TWO states: Light On; Light Off.

BINARY means TWO states.

Ever since the French Baudot code arrived, teleprinter characters
have been equally-spaced character bits in a constant-rate serial
data stream. Much much easier to decode into written text than
the variable length-versus-character format of morse code.

Note: In commercial and military communications, "telegraphy" is
the general descriptor that includes teleprinters.

If you want to indulge in some kind of "CW decoder program" then
you can assign whatever digital hardware/software you want to
represent the variations in time of dots, dashes, spaces between
character elements, spaces between characters, and spaces
between telegraphic words. Whatever you choose has nothing to
do with the basic definition of a telegraphic system's stable states
being binary.

Hello Jim, long time... :-)

I said U.S. hams were stuck ABOVE 1.6 MHz...or at least
thought I wrote that. :-)

Yes, "morse gets through when everything else will..." :-)

In another thread I was stating my advocacy for eliminating
the morse code TEST for an amateur license. This thread
is about the definition of morse code as binary...or not.

Coslo won't agree that on-off keying CW is binary. I don't
really care to argue with his changing the game rules in
the middle of a thread just so that he can win message
points. [must be tough with the NHL being on strike all
season...must get hockey fans all a-dither...:-)]

It is only "bad humor" since you find yourself in the middle of
it. Even worse was that you didn't think to do it to me first.

> from a kid who can't take the heat of discussing subjects.

No "blaming", Lennie. No "libelous filth".

You punted a typo. You take every opportunity to try and get
mileage out of other's typos, so it got fed back to you. You didn't
like it...Sucks to be you.

> > Neither does your Army career, your wife's alleged education and
> >licensure, or your flirtation with aviation. But you never pass up
a
> >chance to enthrall us with those subjects as your will takes you.
>
> Poor baby. Still throwing the tantrum.

No tantrum, Lennie.

You feel perfectly at ease redirecting the attention of the group
to your non-Amateur Radio exploits (which is to say everything you do)
but then somehow think noone else should.

> I've not "enthralled" anything or anyone by mentioning what I've
> done in the past half century involving radio and electronics.

That's the absolutely first thing you've ever said that is
absolutely and patently true, Lennie. You've not enthralled ANYone!

> I did them and have references which include living individuals
(at
> least three of them are licensed amateur extras) who were also
there
> and can corroborate what was done.

It's not what you've "done"...It's what you've CLAIMED to have
done.

You've had years to pony up some validation of your claims.

You never have.

> Another PCTA extra in here repeatedly quoted (not verbatim)
> a major league baseball player's statement "It ain't braggin if
> ya done it!" Tsk, I've done it and it isn't bragging.

You've claimed a lot of things and so far, not proved a one of
them...Starting with your "out of the box" declaration.

> >> "K4YZ" has charged me repeatedly with plagiarism, the

>...
> Any way he describes Morse code as " Bi-Signal"
>
> This just doesn't strike me as binary.

It's not. It's quadnary. There are TWO characteristics that are being applied. One characteristic is presence and absence: The difference between a mark and a space. The other characteristic is the DURATION of of the symbol - which tells the difference between a dot and a dash for the mark, and end of symbol for the (long) space, as opposed to the end of the mark.

>...
> Sorry. By definition, the on-off telegraphic code has only TWO
> states.
> Ergo, it fits the definition of the word "binary."

Wrong. It has FOUR states. The duration of each state into two categories (long and short) is also significant. "On" and "off" is insufficient.

In your definition, both the dot and dash are in the "on" state - but simply by measuring state fails to yield the difference (i.e. duration) between them.

> As HF radio amateurs use it, "CW" (the colloquial meaning of
> on-off keying of a carrier using International Morse Code) is simply
> two states: Carrier on; carrier off. Two states. Binary.

Not two states. FOUR.
Long-mark: dash
Short-mark: dot
Long-space: end of character.
Short-space: end of mark.

Granted that we only look at the marks to convey the actual information, but we need the spaces too - in order to know how to group the marks into symbols.

No wonder people rag on you in this group. You couldn't even get this correct.

No, it's quadnary.

At first glance, one may think trinary. However, there is a difference between a short space and long space: A short space simply separates the long and short marks, while the long space separates the individual symbols (letters, numbers, and punctuation) from each other. This means that there are 4 states.

Sure you care, Brain.

I keep rubbing your nose in your blatant lies and make you face up
to your lies. That's GOT to hurt.

Now...if you'd STOP lying, I'd have less to do and you'd feel a lot
better about yourself on several different levels.

> Again he keeps score, and sees that he just doesn't measure up.

Are you on Lennie's "messaging points", program, Brain?

I'm sure not.

> That's the usual MO for military fakers. Surprised he hasn't claimed
> to be a Navy Seal, a sniper, or Medal of Honor winner, though he does
> trot out a box of medals that he didn't earn.

There's an other difference between you and I, Brain....

I admit the "medals in the box" are just that...unearned trophies.

You try to claim your "medals" (operation in Somalia, "emergency
comms" experience) are valid.

That's why I have no reservation about calling you a liar in a
public forum. Because you ARE a liar.

Me? I just collect memorabillia and know the difference between
them.

> > Another technique I would call "remote transference." Steven
> > James doesn't like to be humiliated (in any way) and thinks that
> > all who don't believe him should themselves be humiliated.
>
> A better tactic would be to keep his mouth shut.

Why?

You only want me to "keep (my) mouth shut" because i frequently
rub your nose in YOUR newsgroup droppings.

If you'd stop lying, I'd have nothing to rub your nose in.

> > The outpouring of libelous filth against all who disagree with

What "personalities of individuals" are you refering to, Lennie?

Yours? Brain's?

You're both archived liars and deceivers. If there's any "frustration", I am sure it's yours from having your nose rubbed in your misconducts.

Your problem.

> My guess is bi-polar.

And a "guess" would be all you'd be able to offer, Brain. Your "knowledge and experience" in healthcare is even less than your "knowledge and experience" as a "DXer".

Oh, I NEVER said you were "showing off" over your alleged Army
service, Lennie.

What I HAVE said is that the MOS's that YOU have provided support
my contention that you have NO "operating" experience, Army or
otherwise. Oh, you may have "keyed up" a transmitter for testing
purposes, but you were never an "operator" in any stretch of the
imagination.

You were a radio mechanic. Period.

> He isn't reading these postings with rose-colored glasses. His
eyes

No "blaming", Lennie.

You attempted to make a point about errors, and in the process
uttered your own errors.

You made a mistake. It's there for all to see. That's not
"blaming".

> >> "K4YZ" failed to achieve any humor in attempting a pseudonym

> little Steven James. In public.

It's not a lie, Lennie.

You persistently lie in public. You accuse others of dishonesty
and disparge the pursuits of others.

You humiliate your family name.

> I've not "enthralled" anything or anyone by mentioning what I've
> done in the past half century involving radio and electronics.

For once you got something absolutely correct, even if by mistake.

You've not enthralled ANYone except yourself.

> > So far, you've not proved any of my allegations as inaccurate.
> >It's been several years.

>
> More LIES by little Steven James.
>
> No one can disprove something that doesn't exist.

Then why can't you prove that your "work" was original?

> Miraculously, little Stevie NOW claims that I "copied all of
> it from others!" That is utter nonsense. Little Stevie has NO
> such proof, no such references, just a blanket general
> statement which is one more filthy little piece of the trash
> he hurls at those who oppose him in public. Poor baby.

No "poor baby".

You have yet to DISprove anything I have said.

> > "I am laughing at the superior intellect".
>
> Those who have no intellect should not complain or try to
> bluff their way through anything.

True again...which then begs the question as to why you continue to
pass yourself off as something you're not...And that "not" is qualified
or experienced in matters pertaining to Amateur Radio or Amateur Radio
policy...?!?!

Certainly. I agree. But some people do things differently. When 10/11
meters opens up, there is often only a handful of hams on 10, but
there are hundreds (or more) people on 11 meters. The DX potential is
better.

I don't condone it, but I do understand it.

Well lets look at some "efficiencies"
Source
http://my.core.com/~jematz/digicomp.html

SSB 250 wpm but about 150 WPM is the most comfortable speech
speed for humans
CW 30 + wpm Skilled ops can do higher of course
Hell 25 wpm
WSJT 7 wpm
PSK31 30 wpm
RTTY 60 wpm

The latest "hi tech" Ham mode, PSK31 is 30 WPM -- so is the ancient one -
Morse and the other ancient one - RTTY is 60 WPM

When I go down south I can send Morse faster than most folks down there
talk -- Just kiddin
No offense intended -- I like slooww talkin - tis relaxin
Most New Yorkers talk faster than the rest of us can engage brain -- (;-)

For SSB -- Since we can read a lot faster than we can speak -- SSB is
pretty inefficient -- huh?

Anyway -- what's the big hurry??

I think it's probably true that having the no-code licence has increased turnover, but we don't know why. Nobody has done any research on this point.

Doubtless some have used a no-code licence as a substitute for a cellphone. Doubtless some who had only a passing interest got a Tech licence and then moved on, but we have to factor in that they had no exposure to HF. I'm sure that others found that the 'consolation prize' of 50MHz and up wasn't enough of a consolation to bother renewing.

Hi all I am helping a friend promote a web site. You see a childhood friend of hers lost her husband at the World Trade Center on Sept. 11, 2001. She has run into some hard times and my freind wants to help her. So she came up with the idea to market Just say NO to Bin Ladin dartboards and punching bag covers. Not only is she going to donate part of the proceeds to her freind but an additional part of the proceeds will go to the Firemans Fund. If you could take the time to check out the web site it would be much appreciated!! The web site addy is:

http://www.angelonmyshoulder.4t.com

Thanks so much everyone!!

I guess I really don't understand the mindset that allows one to give up
repeatedly at something one really wants. There were times that I found
the going tough, whether in trying to improve my morse speed or in
trying to learn some bit of theory but I never thought of quitting.

See! You did make some educated guesses.

...and those folks never gave a thought to tackling morse code at 5 wpm
to gain access to HF? They either had no curiousity about modes other
than FM on 2m repeaters, no curiousity about the 6m band and what it
offered or perhaps they couldn't muster enough enthusiasm to reach the
next plateau.

The case centered around the fact that the coffee was *extremely* and
unreasonably hot.

So what?

There's no license required to operate houshold appliances, nor power
tools,

which can be extremely dangerous. There's no skills test to pump your
own
gasoline. Or to climb a ladder.
>>

Who are they going to sue? And on what grounds, compared to other
electronic devices?

> >>>>>RF Safety should be the FIRST order of the day, and NO one
should be

The reason for the RF safety questions is to prevent exposing *others*
to
a hazard.

And the FCC has determined that the RF safety requirements of the
Tech test are adequate for hams who use up to 1500 W power output on
"meat-cooking frequencies".

Why shouldn't they?

What is so special about HF that it requires so much more
testing than VHF/UHF?

There's propagation - big deal, it's already covered in the
Tech test, since Techs who have passed code can operate on
4 HF bands.

There's band edges - another no-counter, just add a couple
of questions.

There are no modes, technologies, or power levels allowed
to Generals or Extras that are not allowed to Techs.

So if you say that there is no *need* for code testing
to get a General or Extra, then you must logically also
accept the argument that there is no *need* for about
95% of what's in the General and Extra tests as well.

> >>>>but there have always

Alun.

> Can you honestly wonder that I feel the way I do?

Why did it take 22 years?

And didn't you wind up passing the 20 wpm test?

Exactly!

Some people have a very hard time with math. Others with rote
memorization
of things like band edges.

WHat were the tesrt requirements in the UK then? Here in the USA, the
Novice
and Tech were 5 wpm in that time period.

> passed! I owe them a great deal.

Code training software for PCs was common here in EPA by the early
1980s. I still have old copies that run on DOS 3.2..

In the 1970s and 1980s, HF was full of non-amateur Morse operation. And
the
now-changed treaty required code tests.
>
> Here's another interesting fact. I was teaching ham radio classes for
years
> before I passed the bleeping code!
>
> If none of this rings true, I can assure that every word is the
truth.

But why did it take you so long, Alun?

What study methods did you use?

And note that here in the USA, full privileges have been available
with just a 5 wpm code test *since 1990*. Of course a medical waiver
was needed before 2000, but all such a waiver required was a simple
letter from a medical doctor.

Apply you anticodetest arguments to the written tests. Tell us why most of the written tests must remain. Heck, NCVEC is already trying to trash the writtens even more...

Is it *really* so unreasonable to require Element 1? Particularly considering the training aids and accomodations now available?

Before the
Federal Communications Commission
Washington, D.C. 20554

In the Matter of

Paul D. Westcott
Purdy, MO 65734

Licensee of Amateur Radio Station KC0OAB

)
)
)
)
)
)
)

File No. EB-04-KC-135
NAL/Acct. No. 200532560001
FRN 0007599210

FORFEITURE ORDER

Adopted: February 14, 2005 Released: February 16, 2005

By the Assistant Chief, Enforcement Bureau:

1. In this Forfeiture Order ("Order"), we issue a monetary forfeiture in the amount of four thousand dollars ($4,000) to Paul D. Westcott, licensee of amateur radio station KC0OAB, for willful and repeated failure to respond to Commission requests for information about his station, pursuant to Section 308(b) of the Communications Act of 1934, as amended ("Act").[1]

2. On November 30, 2004, the District Director of the Commission's Kansas City Field Office ("Kansas City Office") issued a Notice of Apparent Liability for Forfeiture ("NAL") in the amount of $4,000 to Mr. Westcott.[2] Mr. Westcott has not filed a response to the NAL. Based on the information before us, we affirm the forfeiture.

3. ACCORDINGLY, IT IS ORDERED that, pursuant to Section 503(b) of the Communications Act of 1934, as amended ("Act"),[3] and Sections 0.111, 0.311 and 1.80(f)(4) of the Commission's Rules,[4] Paul D. Westcott IS LIABLE FOR A MONETARY FORFEITURE in the amount of $4,000 for willfully and repeatedly failing to respond to Commission requests for information about his station.

4. Payment of the forfeiture shall be made in the manner provided for in Section 1.80 of the Rules within 30 days of the release of this Order. If the forfeiture is not paid within the period specified, the case may be referred to the Department of Justice for collection pursuant to Section 504(a) of the Act.[5] Payment by check or money order may be mailed to Forfeiture Collection Section, Finance Branch, Federal Communications Commission, P.O. Box 73482, Chicago, Illinois 60673-7482. Payment by overnight mail may be sent to Bank One/LB 73482, 525 West Monroe, 8th Floor Mailroom, Chicago, IL 60661. Payment by wire transfer may be made to ABA Number 071000013, receiving bank Bank One, and account number 1165259. The payment should note NAL/Acct. No. 200532560001, and FRN 0007599210. Requests for full payment under an installment plan should be sent to: Chief, Revenue and Receivables Group, 445 12th Street, S.W., Washington, D.C. 20554.[6]

5. IT IS FURTHER ORDERED that a copy of this Order shall be sent by First Class Mail and Certified Mail Return Receipt Requested to Paul D. Westcott at his address of record.

FEDERAL COMMUNICATIONS COMMISSION

George R. Dillon
Assistant Chief, Enforcement Bureau

Nope.

You authored some theory-only items in a long-since defunct
Amateur journal. Despite being asked on several occassions to do so,
you've not once provided a single example of where any of your "papers"
were part-and-parcel of some larger project that resulted in some
practical manifestation.

Not one. Zero = None. Nada. Zippo. Zilch.

> > What has widdle Stevie "contributed to the technical development
> > of amateur radio?
>
> Absolutely nothing.

But then I never claimed to, nor have I insinuated that by being
granted unearned privileges that I would be better able to do so...

Like Lennie has....

> > Sitting in ham newsgroups and hurling libelous

It's not "libelous" if it's true.

And if you don't like the "filth", stop spreading it and I will
stop rubbing your nose in it. It's your filth, after all.

> > Define "technical development" in radio, oh mighty radio guru!

"Nuts"...?!?! For standing up to liars and deceivers like the two
of you..?!?!

HA!

> Steve continues to be inconsistent in how he applies his core values
> and beliefs.

No, I'm not.

Brian P Burke and Leonard H Anderson are known liars and I do not
tolerate either of them.

Brian has, on occassion, demonstrated some civil behaviour and
tolerance for others opinions and beliefs, and on those occassions
we've gotten along just fine...but then he goes right back into the
LennieMode and "fight's on".

> > Poor Stevie, all confused again as to what is "right or wrong"
> > and personal fantasy versus reality. Thinks all who oppose
> > his opinions are "wrong," "liars," "untruthful," etc., etc.

No...I only think that those who have been consistently wrong
(Lennie has made numerous errors of fact pertaining to Part 95, Part
97, ARES, etc), who repeatedly lie ("I am going to get my Extra lite
out of the box", "The BoD of the ARRL is dishonest") and untruthful ("I
served under the threat of the Soviet Tu-95 Bear bomber" "I know what
it's like to be under incoming artillery fire") are "wrong", "liars"
and "untruthful".

All of those examples are archived as being the comments of Leonard
H. Anderson, by the way.

Brian P. Burke has his own entire set of established and on-going
mistruths archived in Google.

Steve, K4YZ

1754. Cell Phone Jammers

I don't tolerate bullies very well. You, Steve Robeson, are a bully.
I called you on your bullishness, and you turned back into a raving
lunatic.

All archived in google, waiting for the next background investigation
update for medical personnel with access to narcotics.

Best of Luck, nut.

It is simply not an efficient use of my time to become proficient with it (> 10wpm), nor will any other service fool with it anymore. If the mode had been worthwhile, the Coast Guard and Western Union would have paid (illegal) immigrants to pass traffic cheaply. Or outsourced it to India.

So do I. Sending CW is so much fun that I spell everything out
phonetically in Morse Code.

For instance, CQ is sent "c h a r l e y q u e b e c" It just makes
the good times last longer.

Steven James will deny this through some obscure rationalizations;
the kind of rationalization is not necessarily predictable. A
number
of other PCTA extras will no doubt join in the fray, damning me and
possibly yourself in the spirit they have (ghoulish as that is).
The
PCTA extras love to gang up on dissenters. :-)

Phil Kane may even have sided with the PCTAs although he claims
to be against keeping the morse test. He apparently told you that
"thinking" is "wrong" on your sentence about "...think that there
are
no morse skilled" at the FCC monitoring stations. He told you that
"you are so wrong." One can take that as a sort-of directive that
thinking is wrong. :-)

Philosophically speaking (in the old sense of philosophy), electrons
fields and waves don't recognize any human definitions of service
or kind of application. All of radio, regardless of the "service,"
work
by the same principles of physics. Olde tyme hammes don't (or
can't) think that way. They seem to think that a HAM radio thing
will ONLY work for a licensed radio amateur and that such a thing
is different if used for any other radio service. Now THAT thinking
IS wrong...besides being dumb. :-)

>> Sitting in ham newsgroups and hurling libelous
>> filth against all who oppose him? :-)
>
>At every opportunity.

Steven James must be a follower of USMC Lt.Gen. Mattis who
loves to brawl and thinks "it's fun to shoot people!" (according to
a much-publicized news item from a public speech by Mattis
a week or so ago)

>> Define "technical development" in radio, oh mighty radio guru!
>>
>> Show us your work, your brilliant developments of buying ready-
>> built equipment and building "weekender" projects from articles
>> in ham magazines...no doubt all full of amazing technology
>> never before seen, ey? :-)
>
>Steve harms amateur radio by his very presence. He's nuts and he's
not
>afraid to prove it.

Tsk. He doesn't realize this.

He has much confusion on the word "service" for example: The FCC
uses the word "service" in regards to the type and kind of radio
activity being regulated...such as broadcasting or maritime radio or
citizens band or private land mobile, etc., etc. Steven James'
postings tend towards his imagining the amateur radio "service" as
being a continuation of some "military service" such as the USMC.
That way of thinking allows him to put on his NCO rank and boss
others around as if he had the pursed lips of a Dill instructor
(complete with flat-brimmed campaign hat). Problem is, he doesn't
have such rank, doesn't have such authority, in a civilian hobby
activity (amateur radio). Nonetheless, he attempts to bully others
around "as if" (as the eastern colloquialism has it).

>> >You are not a licensed Amateur. You cannot, therefore, be
>> >any kind of a judge of what Amateurs should do or how they should
do
>> >it.

The two sentences are a typical example of newsgroup bullying.

It is also typical of the fantasy of eliteness wallowed in by so
many olde tyme hammes up to their armpits in self-
righteousness.

Such self-righteousness FAILS in the USA because the federal
agency regulating all civil radio here does NOT require
commissioners or staff to hold amateur radio licenses to fulfill
their lawful duty of regulating all amateur radio. The way some of
them carry on, the FCC must be considered as secondary to the
ARRL as the perceived "regulator of ham radio" in the USA... :-)

Nonetheless, those self-righteous self-appointed-sheriffs of ham
radio want to RESTRICT access to public newsgroups on THEIR
terms. Nobody tells them what to do! They think they rule. :-)
They don't but that doesn't stop those middle-aged "boyz in da
'hood" from spraying their "turf" graffitti where they want.

The PCTA extras go a step further. They also spray some kind
of time stasis on everything in U.S. amateur radio, demanding a
retro condition of timeless holding to old, outdated regulations
that they bought into when young and a newbie to ham radio.
They were brainwashed into a false idealism and have never
cleared themselves of those olde ideals.

In one way, the absolute hold to now-old standards and practices
is a form of personal survival. It gives the impression of them
remaining forever young despite the inescapable fact that all of
us are continuing to grow old. So, they reinforce their personal
fantasies by federal regulations requiring all newcomers to do as
they did in loving, honoring, cherishing morse code through
passing a federal test on that ability. Those "marriage vows" to
the sanctity of morsemanship shine through most of the printed
media of the ARRL, further spreading (and enobling) the sanctity
of morse. It is reinforcement of their early brainwashing.

Those PCTA extras have an absolutist view of morsemanship:
Anyone against morse code testing is "against all amateur
radio (as in hating all hams)!" :-)

>Wonder why Steve allows non-amateurs to sit in judgement of amateur
>radio?

He has a variable standard. The FCC is "approved" because
they give him a TITLE...it's a "(military) rank substitute." From
that it is an easy route to being "better than others" because
he can reference public information on the fact that he is an
amateur extra class licensee and thus "important, a somebody."

He is much into Titles, Rank, Privilege, plus being able to Show
it through pretty certificates (suitable for framing) and medals.
It's his personal bling-bling. If a federal or state agency can
give
him title, rank, status or privilege, they are favored...as long as
they don't interfere with that title, rank, status or privilege.

If the morse code test is eliminated, that will END one part of
the title-rank-privilege package. Some of that has already
happened with the recent Restructuring putting a cap of 5
WPM on all code testing. Olde-tyme hammes want to
preserve their illusion of being "top gun" through passing
a 20 WPM code test but are forced into attempted degredation
of new extras, as in terms "nickel extra" or "extra lite"
applied to recent amateur extras. Those olde-tymers are
angry that federals no longer recognize their intrinsic
superiority so they go into name-calling.

>He fails to substantiate his "seven hostile actions."
>
>Such a big claim, zero evidence. And his credibility is such that we
>just can't give him a pass. Nope. No pass.

It's all part of a curious form of gamesmanship in here, all bluff in Steven James' case. He wants to be a SOMEBODY of fame, to be "recognized" and respected for his accomplishments. If that means stepping all over what others have done, calling all their claims "lies," then he will do that...and has. He does not need to verify his claims by giving details such as place and date. We are all expected to "believe" him lest we incur an avalanche of subsequent insult postings (along with failure to give details). He will bully all who do not accept that.

All of us are somebody and each of us is unique. We can grow and learn by sharing experiences, data, results...or we can engage in countless, mindless flame wars ignited by those who cannot handle strong opposition to certain opinions. But, personal insults exist and some must be dealt with as in the spiteful postings of Steven James.

He wants to ridicule others for having worked for what they have. As one example, he ridicules my long period of formal college education as a "night school" (in the manner of remedial language lessons put on by some local communities). Those "night school" classes were fully accredited college courses. Working a full day and then going to class at least three nights a week is hard work...worse on work overtime or having to cancel a whole semester due to the company sending me on field trips. Such is denigrated, made fun of by him...as if one going to "night school" was "stupid, ignorant, or slothful."

Steven James repeatedly made fun of my Army assignment a half century ago, saying "I embellished my 'military career' in exaggerating things and 'dishonoring' my unit members." I'd mentioned Army station ADA in regards to showing that the military did not use "CW" for massive long-haul traffic a half century ago. Steven James insists that I "brag" about that even though I've not only got written documentation (and some Signal Corps official photographs of me at the station) plus have a personal reference (Gene Rosenbaum, N2JTV) who was assigned there during my time, plus mentions in the Pacific Stars & Stripes military newspaper. It seems that operating a large military HF radio station is "less" than operating a single ham transmitter (by "CW" on HF, of course) today. Not only that, some PCTA extras claim that operating a military radio is "not really operating a radio!" Certainly not a powerful (100 W) complicated (MOPA) ham transmitter (with many knobs and dials, etc.) using that "universal language" of morse code (in the best amateur manner a la 1930s standards and practices).

I won't go into Steven James' vile insults about my wife other than to say that the University of Illinois (a center for computer research) at Urbana is NOT a "correspondence school" taking out ads in newsstand pulp magazines.

>> Poor Stevie, all confused again as to what is "right or wrong"
>> and personal fantasy versus reality. Thinks all who oppose
>> his opinions are "wrong," "liars," "untruthful," etc., etc.
>>
>> Widdle Stevie is nutso.

>Indeed.

It's unfortunate that this newsgroup delves into personality battles
so often...or into petty arguments on definitions which have been
made years ago (such as on-off keyed CW is "not" binary in the
newest argument-for-argument sake). SUBJECTS should be
discussed, not the personalities of correspondents.

Glad you said YOUR time -- don't impose this excuse on folks who enjoy CW.

Whether the military or WU use Morse or not has no bearing on the fact that Morse is just another ham communication mode that many enjoy.

And many people who type at less than 30 wpm are pecking away on the internet. Is that an efficient use of time ???

BTW; How fast do you type ????

Well, we'd have to adjust it to compare with your metric. My six months
was an intense study period after several fits and starts. I'd probably
have to adjust it to a couple years to compare with your time, as I
passed my GEneral ~ 2 years after I passed my Technician. While I was
studying for the Technician test, I also studied for Element 1.

Back when I originally made the "Jump frog jump comment, it was about
people making an incorrect or bizzare conclusion from plain evidence.

Where people Might say that the No-Code technicians quit because The
had a license that didn't have Element 1 as a test requirement.

True enough, Brian. However, the PCTA Double Standard is
operative in here and they regard any lack of positive support for
Their opinions as "uncivil and intolerant." :-)

>>and on those occassions
>> we've gotten along just fine...but then he goes right back into the
>> LennieMode and "fight's on".
>
>I don't tolerate bullies very well. You, Steve Robeson, are a bully.

>lunatic.

That's also true enough but the Double Standard allows all
PCTA extras to behave in any way they choose, uncluding
the (archived) uncivility, bullying, personal insults, etc. :-)

Poor guy...keeps trying a consistent misdirection: Repeating
all criticsm of him by others into "his" criticism against others.
It's fairly plain to all readers of this newsgroup...and has a
negative effect...on him, not us.

>All archived in google, waiting for the next background investigation
>update for medical personnel with access to narcotics.

That's the double-edged sword (like Damocles') which can
cut both ways. Poor guy doesn't understand that HIS posts
are stored there as well.

But, his self-delusion is so blinding that he never sees
himself in any wrongdoing...it is always "others" doing
wrong. :-)

He simply can't stand any opinions contrary to his. Tsk.

Worse, he appears to be going nuts.

>Or are you? Which Steve Robeson is this?

Same old spiteful standard issue...

>> Well...MOST of the dullest...YOU seem to take it verbatim.
>>Silly Rabbit...
>
>Ahhhh. The Road Runner Steve Robeson.
>
>Walter Mitty was brilliant. Steve is just nuts.

Psychotic might be the diagnosis, but that is for those who
are qualified. Sociopathic is identifiable by anyone and that
would apply to him...definitely sociopathic to all who have
opinions contrary to his. He "does no wrong" (in his fantasy)
therefore any criticsm of him is...you guessed it..."wrong."
Or it is a "lie" or equally heinous capital crime. :-)

Crude humor is still crude humor and that posting was crude.
Worse, it was deliberately insulting, no mistake about it.
But, in Stevieworld, that is "okay." :-)

Beep-beep

The manufacturers of equipment, the VEC that administered the test. Find
some deep pockets and sue, sue, sue.

As a little example of the mindset, you might recall an accident along
I-80 last year, a few miles from my QTH. Huge horrible pileup, many
vehicles, many people killed, and a fiery mess that took a long time to
clean up. The accident was related to a snow squall that blew up
unexpectedly, and the excessive speed that the whole group was traveling
at. While no charges were filed against anyone at the time, the families
of the deceased are filing suit against the truck drivers *and* the
companies they worked for. Hopefully the trucking companies have a good
safety program.

And on what grounds, compared to other
> electronic devices?

Most of my appliances have warnings on them of electric shock potential,
or of cutting, burning, whatever dangers also. There is a reason why
they are there.

Nobody can be protected completely from a lawsuit. But if you are sued,
you are well served to have forewarned potential litigation adversaries
of the possible dangers of the devices they may use.

Yoiks! We're doing major time/subject shifting here, Jim! My comments several iterations of the thread ago were in relation to possible changing of test requirements, ala the W5YI proposal, where the newcomers are given a much simpler test, and things that I consider critically important, such as not having your hobby kill ya, would be dropped from the testing.

Everyone may disagree, but that's too bad.

>> from a kid who can't take the heat of discussing subjects.
>
> No "blaming", Lennie.
>
> You attempted to make a point about errors, and in the process
>uttered your own errors.

What were those...specifically? Tsk, little Steven James has
to accuse-accuse-accuse in generalities, can't identify the
alleged "errors."

> You made a mistake. It's there for all to see. That's not
>"blaming".

Tsk, tsk. I didn't steal a very old newspaper filler joke.

I didn't rewrite it (badly) with definite insult targeting
of an individual.

I wouldn't make a mistake on my wife's name, but little
Steven James fabricated a "new" name, an ugly one, complete
with a mistake on both spelling and gender.

Guess who fabricated an insulting "story" and posted it,
in a separate thread which had nothing to do with amateur
radio policy?

>> > The lack of humor comes from your lack of respect for her
acting
>> >the way you do in public.
>>
>> Tsk, tsk. Another LIE in the heap of libelous filth babbled by
>> little Steven James. In public.
>
> It's not a lie, Lennie.

Tsk, tsk, little Stevie fabricated a falsehood, an entire posting
worth!

> You persistently lie in public.

Poor stevie (lower case) posts a complete falsehood, then gets
upset with complaints. Boo hoo, let's all feel so sorry for little

stevie because the target of his ugly little insulting fabrication
didn't like it!

> You humiliate your family name.

Now THAT is a new one! :-)

Little stevie is reallly reaching for bad things to say. Tsk, his
uncreative little mind can only come up with that falsehood!

>> > So far, you've not proved any of my allegations as inaccurate.
>> >It's been several years.
>>
>> More LIES by little Steven James.
>>
>> No one can disprove something that doesn't exist.
>
> Then why can't you prove that your "work" was original?

Little stevie is starting to flip out. Since when was THAT
charge necessary to refute an ugly little fabricated joke
that was a personal insult against both me and my wife?

Little stevie is going insane, apparently.

>> Miraculously, little Stevie NOW claims that I "copied all of
>> it from others!" That is utter nonsense. Little Stevie has NO
>> such proof, no such references, just a blanket general
>> statement which is one more filthy little piece of the trash
>> he hurls at those who oppose him in public. Poor baby.
>
> No "poor baby".
>
> You have yet to DISprove anything I have said.

"Disprove" manuscript content that was purchased by
professional editors and publishers, checked by their
staff (including attornies), and then printed before little
stevie's fabricated personal insult "joke" appeared here?

"Disprove" the work that I did for employers spanning
half a century? Tsk, tsk, I've given the names and
locations of my former employers in here. ANY reader
could contact them and their personnel departments to
confirm that...independently of myself by true research
methods. I've given the name and ham callsign of one
of the best managers I've ever had in here. I've given
the names and ham callsigns of two others who were
friends of mine, one of which was Best Man at my
wedding.

What does little stevie come up as a "witness for
badness at work" against me? A NO-name, unidentified

individual that "once worked at NADC" and who can "verify" little stevie's "charge." In other words, a fabrication of his, a LIE. [I never worked for the Navy and was at NADC as an employee of RCA Corporation some 33 years ago]

Little stevie is coming undone in mental stability, needs help from qualified medical doctors to attempt making him stable. I don't believe medical science is advanced that far but remain optimistic that doctors can cure him.

Good luck, doctors!

All you have described is a wireless WAN - no big deal, it's in use
in large industrial campuses such as between the three Intel Corp.
facilities in Washington County here. There even is a ham band not
that far from the commercial microwave band which they use. It
ain't gonna' work on 2 meters, though. You need far too much rf
bandwidth.

>Girly you say, well I would this

There's always been "monkey business" here and there in the "CW bands". The notion held by some that the CW bands are some sort of pristine Radio Nirvana where there are no sinners is complete nonsense and/or wishful thinking. Go all the way back to the 1950s around 3.505 and thereabouts on cold midnites when one could almost hear all the guys listening for some DX to pop up. Got tiresome but we hung in. On any number of occasions some bush-league miscreant would get tired of listening to the noise floor and just for the hell of it would decide to generate a pileup. I dunno how many times I worked "6L6GB". "QSL via the buro". Yeah, right. The W9 buro. Even Jack VE1ZZ the Lord High Commissioner of 80M dxing couldn't resist jumping into those frays if they were really good ones.

I'm glad that you enjoy the mode, but don't impose your favorite mode
as a barrier to HF access to the rest of the USA.

> Whether the military or WU use Morse or not has no bearing on the
fact that
> Morse is just another ham communication mode that many enjoy.

I think it does when that "just another" communication mode is
pass/fail entry to HF.

> And many people who type at less than 30 wpm are pecking away on the

RRAP is a complete waste of time. It's been a while since anyone
actually wanted to talk about code.

> BTW; How fast do you type ????
>
> Caveat Lector

I haven't been clocked in years. Last time was ~45wpm about 1985. Had
to prove I could type to get on the mainframe. Teletypes and IBM card
cutters kind of screwed up my regular keyboard ability etx

problem with those wifi system would come up a way to keep non-amateurs out.
As I stated in my previous post this system, I think this system would work
better for amateur radio because it would eliminate fowarding and would
allow a variety more stuff in the amateur service. Stuff that wasn't allowed
due to the speed problem; including a online library with a mass variety of
tech books.

Uh, duh. Try because I couldn't do it. Hitting your head against a wall is
something one ought not to prolong endlessly. Sometimes it's better to go
away and do something else. I have realised from these kind of discussions
that you will never in a million years be able to comprehend just how hard
I found it, which is why I have avoided reposting this until now.

The US requirements for hams have never been anywhere near so
stringent.

The *toughest* they ever were was 1 minute solid copy out of 5 minutes
- plain language. 5, 13 and 20 wpm. That's 20% accuracy! About 20-25
years ago, fill-in-the-blank and multiple choice were added.

> Early on, mainly just listening to slow Morse transmissions

And then what?

And if the test were only 5 wpm, and you had a choice of
1 minute solid copy or fill-in-the-blank with 70% being the
passing grade, how long would it have taken you to learn
enough to pass the test?

> 5wpm isn't very fast, but why is it required to operate phone?

A couple of reasons:

For the same reason hams have to pass written *theory* tests to
use *manufactured* rigs with no critical tuneup adjustments.

For the same reason hams have to pass written tests on VHF/UHF to
operate HF, high-power RF exposure questions to operate QRP, etc.

And because code is a big part of amateur radio, and a ham who doesn't
know any just isn't fully qualified.

> final in his transmitter..... :-)

No doubt. But most of the serious 80M dxers in those days ran "suds", a lotta power, not just a lotta power but 'WAY too much power. Back then the max allowable power was one kW input vs. today's 1.5kW output. Any number of the Really Big Guns used homebrewed amps which tossed out a kilowatt's worth of heat alone. Or more. And those beasts weren't lossy linears either. Which is another example of blatent "impurity" in the CW bands. Offhand I'd be willing to bet that there are far fewer instances of busting the power limits today than there were back then. The FCC took the easy way out of having to bother with enforcing the power limits by roughly tripling the max allowable power input, clever labor-avoiding folk that they are. That move plus economics, the drying up of the WW2 parts sources and the need for linear amps have "solved" the excesss power problem and brought most of those bad old boys and their descendants into "compliance" today.

"Tube callsigns" were a favorite but there were others and some were a tad on the raunchy side. 4Q2?? showed up more than once. Whatever it took to get some giggles.

Alun L. Palmer wrote:

> 5wpm isn't very fast, but why is it required to operate phone?

And there we have the crux of the situation, expressed in a simple question.

If a person wants to operate phone, and that is it, then what do they need to do that?

Nothing. The Citizen's Band is adequate proof of that

Buy a rig, an antenna, and pay some people to put it up. Presumably the only requirement is to know how to read, talk and mash the PTT button.

But the problem is that the ARS isn't simply about operating phone. It is about all kinds of operating modes. It is about all manner of technical endeavors that we may engage in.

Operating phone is only one part of the hobby, and is arguably the easiest part to do, as we have all learned to talk, so the prerequisites have been met for most people.

The test requirements are there to give us some basic exposure to elements of the hobby that are considered important by knowledgeable people. While there may be argument about how well the tests function for that purpose, there they are.

And what of people who only intend to operate phone QRP? The RF exposure questions are kind of a waste of time for them. Satellite operations? Just how many Hams do satellite operations? Why test on band allocations, we can look them up in a book. Why should a person have to do any basic electronics questions if they only want to buy a rig and antenna and operate phone?

We can eventually argue away most of the test.

It is interesting that two people who have some similarities in experience can draw such different conclusions from that experience.

Whereas you have chosen to be bitter about your experience (bitter may be a bit strong of a word - at least you're not to happy about it) regarding Morse code testing, and I actually ended up being pleased that I was able to overcome my own physical limitations and pass the darn thing. I don't advocate changing the rules because I had trouble with one of them.

I think we can agree to differ on that last point.

As a matter of fact, even directly after passing the US 20wpm test I couldn't have passed the UK 12wpm test.

5wpm is not too difficult, especially the way it is tested in the US, but until recently it only gave access to the 'novice' subbands in the US, all of which except for 10m didn't allow phone. From my PoV, it would only have given me 10m at that time. I never took 5.

I probably could have passed 5 when I came to the US, but I simply didn't realise how much easier the tests were here. Thinking it would have been as hard as a UK test I didn't bother to take it. I was operating above 30MHz on a 610A permit, and when the 'no code' licence was introduced I decided to get a US call. Having 'aced' the Novice and I think dropped one question in the Tech paper, I was given the General paper, for which I hadn't looked at the syllabus or question pool atall, and I passed that. Ditto the Advanced, but they didn't have a spare Extra paper. None of this really surprised me, as the UK B licence had the same theory as the A licence, and I have an EE degree anyway, but it surprised the VEs.

This gave me 12 months to pass 13wpm if I didn't want to have to take the General and Advanced theory again. With the help of computer software and slow Morse transmissions I did it in six months. Note that Mike got there

in that amount of time from scratch even with hearing problems, and it took me that long when I wasn't starting from the beginning, and there's no problem with my hearing. Also, I had a relay of all the VEs sending code on 2m five nights a week. They saw it a a challenge to teach me code. I almost passed 20, but I had to come back a couple of months later.

To get up to 13wpm meant copying whole characters instead of dits and dahs, no matter how easy the type of test. OK, so that's gone, but that means the remaining Element 1 doesn't test the ability to copy complete characters, so on the one hand it's relatively easy, but on the other hand it's pointless. Why preserve a test that doesn't test an adequate level of a skill as a requirement for access to a particular part of the spectrum, when there's no requirement to use that skill anyway? Tradition? That's a weak reason, but it seems to be the only one. Sure, 40% of HF may be CW, but I can (and do) operate 100% phone .

Life Technology Research International®
www.lifetechnology.org
email us at: ormusalchemy@aol.com for more information

The Psychotronic Money Magnet☐ Ultra Advanced Version 1.0
The Ultimate in Causal Engineering Technology
www.lifetechnology.org/ultramoneymagnet.htm

Through the aid of spiritual guidance given to us by the higher forces we have discovered a uniquely different and improved method of creating our well known Psychotronic Money Magnet☐ .The new method was delivered to us through an exceptionally gifted channel and we were astounded by the information that we were privileged to have received. According to the information the new method which we are adopting can raise the subtle energy characteristics and the manifesting capabilities of The Ultra Advanced Psychotronic Money Magnet☐ more than one hundred fold.

According to numerous testimonials this powerful device has certainly proved that it has the power to change one's financial situation for the better in the shortest possible time, and it is without doubt the most powerful and successful money generating talisman of all time. The sole function of The Ultra Advanced Psychotronic Money Magnet☐ is simply to create opportunities for it's owner to gain money and prosper financially. The longer one possesses this unique cosmic money magnet , the stronger it will become, and the more money it will draw to it's owner.

We have been using this device ourselves for some time now and experienced a massive increase in company income and profits just a few days after the first creation of The Ultra Advanced Psychotronic Money Magnet☐ .We have been exceptionally blessed by the higher forces and in particular by the wisdom of The Archangel Mikhail.

Originally Life Technology Research International® had listed these devices as Psychotronic Generators☐ designed to be programmed for various different types of archetypal energy (trend) ,but when we became aware of the massive demand for the money and wealth programmed Psychotronic Generator☐ it was decided to being marketing The Psychotronic Money Magnet☐ as a specifically programmed stand alone device. It is only now that we have been given specific information to create a magical tool that will quite simply transform ones life.

Could The Ultra Advanced Psychotronic Money Magnet☐ become the most powerful metaphysical tool ever created? It is our belief that the most

significant difference between this device and other forms of magickal talisman or life changing catalyst (eg NLP ,Huna , Hypnosis, Kaballah , Magick etc) is its passive mode of operation, ie no conscious input is required from the user, and unlike many other talismans the device will function optimally without any necessity for a certain belief system on the part of the user. The Ultra Advanced Psychotronic Money Magnet□ is so powerful in fact that it will override the belief system of the most hardened sceptic, and will reverse the mindset of the most pessimistic belief system.

Life Technology Research International® has taken this technology of 'Causal Engineering' and using methods based on the developmental work of Pavlita, Rifat , Fortune and many hours of Russian Psychotronics research we convert quartz crystals to Psychotronic Generators□. They amplify, produce and direct bioplasmic energy to modify quantum mechanical collapse, changing the course of events in the macroscopic world. This device uses a multiphase set of fields which apart from altering events, inculcate a theta rhythm of around 7 to 8 Hz, the natural theta frequency of the planet being 7.82. This frequency is the Schumann Resonance, the doorway to the world of causal engineering, ie consciously creating and manifesting ones desires.

The Ultra Advanced Psychotronic Money Magnet□ acts by establishing a new pattern of financial abundance in the subconscious and subtle energy fields of the user by harnessing the lifeforce and wealth enhancing powers of the Hebrew letters of the Kaballah. It is widely recognised in esoteric science and by academics such as James Hurtak and Stan Tenen among others that Hebrew letters through their specific mathematical structural geometry contain information that encodes life force energy, ie it provides an intelligent template for natural creative forces. It is these magical primal creative forces of The Kabbalah that we harness and focus in the preparation of The Ultra Advanced Psychotronic Money Magnet□

In the 1920's it was discovered that quartz crystals resonate at 32,768 khz. Seeing that the Great Pyramid of Khufu or Cheops Pyramid, is made mostly of limestone, which stone crystal matrix is mostly quartz, It is proposed that the entire pyramid operates as a conciously programmable cosmic biocomputer or radionics device, a massive Psychotronic Generator□ originally capable of harnessing and directing the focussed intent of the Egyptian priests who were its engineers .

The fact is that everything in the universe vibrates and oscillates. Therefore the connecting link between all forms of energy is vibration, sympathetic harmony and resonance. By studying and applying the principles of vibration we are enabled to see beyond material matter and into the primary creative forces of nature. Utilising the information from diverse fields such as Radionics, Psionics ,Psychotronics ,Quantum Physics ,Sacred Geometry, Sonics ,music and metaphysics has led to an understanding of how the human mind can interact creatively with the material universe.

Essentially, when the biotronic matrix of The Ultra Advanced Psychotronic Money Magnet☐ interacts with the conscious will of the operator it causes subtle changes to occur in the microcosmic universe which translates to manifestation in the macrocosmic universe (real world).

This device will naturally induce a theta state in the user as it alters reality to make money, wealth, abundance and affluence etc. more probable. The Ultra Advanced Psychotronic Money Magnet☐ is charged with the specific programming described above ,or may be programmed with your own specific intent. On request, Life Technology Research International® creates Psychotronic Generators☐ to generate any operational trend field which will facilitate the materialisation of any wish.

The Ultra Advanced Psychotronic Money Magnet☐ may be used in each of the following ways:
Place on a desk or on a bedside table for passive functionality, no input from the user is required.The device is an ideal size to be carried in a pocket or kept in a handbag. It is better that the device should be kept as close as possible to the user, ideally within 2 meters.

The device may also be kept under a pillow while sleeping where archetypal information will permeate and influence the subconscious mind ,or held in the hands or placed on the body while meditating. While relaxing or meditating it is an excellent idea to hold the crystal in either or both hands and focus positively on areas of ones life where positive financial change could occur, ie ones job ,business practices ,salary level etc. Create a mental movie and visualise achieving a wealthy ,prosperous state of existence. In any form of conscious subtle energy manipulation, results will occur through the artificial enhancement of natural processes. It is therefore important to recognise the new opportunities that you will attract to your life which will direct you towards a new paradigm of wealth and prosperity.

Ordering
The Ultra Advanced Psychotronic Money Magnet☐ supplied is the highest grade clear rock quartz . Please note that this is the much more powerful version of our other Psychotronic Money Magnet☐ for sale at our site and other auctions for $90. Each Ultra Advanced Psychotronic Money Magnet☐ comes with instructions for use. Each individually created Ultra Advanced Psychotronic Money Magnet☐ is priced at $180 US dollars. International shipping is priced at $10 US Dollars.
Shipping Insurance is optional.

Our 100% customer satisfaction rating at ebay indicates how pleased our customers have been since we began supplying our metaphysical products there. Please visit The Life Technology Ebay Store at http://stores.ebay.com/life-technology

This product may be of interest to students or practitioners of Alchemy ,Kabbalah, Reiki, Homeopathy, Healing, Buddhism, Shamanism, Pagansism, Rife Therapy, Chakra Therapy, Witchcraft, Antropology, Wicca, Magick, Huna, Hypnosis, Nlp, Rosicrucianism, Mysticism, Radionics, Psionics and Psychotronics etc.

All of which was pretty harmless compared to, say, intentional jamming, cussing, threats, interference to genuine public service comms, etc.

Most of all - did FCC ever get involved? Were there complaints? Or was it just a bit of shenanigans on the QRG?

Look at the enforcement letters *today* and see what the charges are. And what modes are used. It ain't about a couple of CW DXers working a slim.

Perhaps.

Do you agree that Morse code is a big part of amateur radio? Not that
it needs a test, but just that it is a big part of today's amateur
radio, particularly on HF?

> As a matter of fact, even directly after passing the US 20wpm test I
> couldn't have passed the UK 12wpm test.

Perhaps. But I thought we were discussing *US* code test requirements.
>
> 5wpm is not too difficult, especially the way it is tested in the US,
but

only have
> given me 10m at that time. I never took 5.

Since 1990 it has been possible to get an Extra (or any other
HF-privileges amateur radio license) with just the 5 wpm code test and
a waiver. 15 years - hardly "recently".

> I probably could have passed 5 when I came to the US, but I simply
didn't
> realise how much easier the tests were here. Thinking it would have
been as
> hard as a UK test I didn't bother to take it.

The test procedures here aren't secret. Never were.

licence, and
> I have an EE degree anyway, but it surprised the VEs.

Why should it? The US writtens were *never* very hard - if you knew a
little radio and some regs.

Back in 1968 I went for General at the FCC office in early summer. Did
not pass 13 wpm code because the examiner couldn't read my longhand.
Got credit for 5 wpm, took the written (which was same as General back
then), walked out with a Tech. Could not use the new privs until the
actual license arrived in the mail, though.

Went home, taught myself Signal-Corps-method block printing and more
practice until I could do 18 wpm W1AW bulletins solid. Went back and
passed 13 wpm code easily, sending and receiving.

Then the examiner says "why not try Advanced while you're here?". Now
in those days the Advanced was supposedly the toughest of the writtens,
with all sorts of math and circuits and such. But one did not say No to
The Man, so I tried, with zero preparation. Passed easily and wound up
with Advanced instead of General.

That was back before question pools, Bash books and computerized
practice tests. Didn't have an EE back then either - I was 14 years old
and it was the summer between 8th and 9th grades.

Two years later I went back to get the Extra. Would have been sooner
but in those days you had to have two years experience as General or
Advanced to even *try* the Extra.
>
> This gave me 12 months to pass 13wpm if I didn't want to have to take
the
> General and Advanced theory again. With the help of computer software
and
> slow Morse transmissions I did it in six months.

Bingo.

How long do you think it would have taken to get to 5 wpm, tested the
way the USA does?

> Note that Mike got there
> in that amount of time from scratch even with hearing problems, and
it took

means the
> remaining Element 1 doesn't test the ability to copy complete
characters,
> so on the one hand it's relatively easy, but on the other hand it's
> pointless.

Not at all.

If the code uses Farnsworth spacing, you copy characters, not dits and
dahs. This isn't anything new - W1AW has been sending code practice
that way since at least 1966 (first time I heard it, anyway).

> Why preserve a test that doesn't test an adequate level of a
> skill as a requirement for access to a particular part of the
spectrum,
> when there's no requirement to use that skill anyway?

Same reason for written tests. Do the writtens guarantee that all who
pass can design/build/modify/repair/operate all amateur equipment they
are authorized to use? Or do they test basic knowledge?

5 wpm is basic Morse skill, that's all.

Why is it too much to ask?

> Tradition? That's a
> weak reason, but it seems to be the only one. Sure, 40% of HF may be
CW,
> but I can (and do) operate 100% phone .

And my HF operation is 99% CW on 80/40/20, with 100 watts or less output, yet I had to learn all kinds of stuff about high power, 'phone modes, RTTY, SSTV, other HF bands, VHF/UHF, etc. Most of that knowledge I've never needed, and some of it (like band edges) has changed since I took the test. So why did I have to learn all that in the first place, just to operate a QRP rig on 7015 CW?

Then we better just give up, because there's no test to use a microwave
oven or a table saw.

One of the most dangerous substances the average person handles is
gasoline, yet there's no test for how to deal with it.

They're the *expert agency*, not the VEs or VECs. Heck, NCVEC wants to
lower the written exams - too much math and regs, sez they.

Shall we revisit "Amateur Radio in the 21st Century"? I wonder if Len
Anderson and Brian Burke have read that wonderful piece, and what they
think of it.

I recommend it to all. Tells ya what the next step is.

So we get a serious (?) enforcement action for hams using CW every
decade or so. Compared to how many for other modes?

It's not false.

It's not the first time I've said it.

You're a humiliation. To yourself. To your wife. To your family
name. To professional electrical engineering.

> > Then why can't you prove that your "work" was original?
>

You can't prove any of your "work" was original then claim others
are "insane" for it.

You're a humiliation. To yourself. To your wife. To your family
name. To professional electrical engineering.

More than one "professional paper" has been disproven as "false"
long after it had been published.

So We're now aasking YOU to "prove your work".

I say that judging by your frequent lies and deceitful behaviour
it's highly unlikely that anything else you've done is valid either.

> "Disprove" the work that I did for employers spanning

We'll just narrow it down to those items published in Amateur
Radio realted periodicals.

As for your "friends"...well...Like usually follows like, and I
have no reason to believe they'd be any more likely to be any kore
honest or "trustworthy" than you...regardless of which side of the

aisle they were standing on.

> Little stevie is coming undone in mental stability, needs

OBVIOUSLY.

> I don't know how you would classify
> yourself, but by European standards you are very far to the right
indeed,

I'm a centrist Republican a la Sen. Arlen Specter, a member of a
disapperaing breed. Ted Kennedy is a right-winger by Old Europe
standards. Welcome to America.

> as by no stretch is Sweden a socialist country.

Blather. It's a country which uses it's outrageous taxes on it's few monster "capitalist" smokestack industries to hand out socialist entitlements to it's population on a scale unheard of in any other country. Entitlments being the heart of socialism in all it's forms. Sven the fender-hanger at the SAAB plant didn't "feel good" yesterday so he stayed home and watched the tube. No problem, he got paid anyway under Swedish law. SAAB plant payrolls are bloated by 20% percent per unit out the door vs. the U.S & Japan because 20% of the SAAB workers "call in sick" every day. Absolute fact. GM got stupid and bought SAAB mostly to save the marque otherwise SAAB would have died years ago but GM is now mulling a pullout to cut their losses. The outflow of capital from Sweden to other countries has been appalling, check out the numbers and why it's happening and what the Swedish government is doing to stanch the bleeding.

I can no doubt go ten blocks around the compass from here in the suburbs of Philadelphia and find more businesses with ten or fewer employees than you'll find in all of Sweden. Why is that Alun?? Could it be that Swedish socialist economics stifles entrepreneurial capitalism which is the engine behind the astounding growth of the U.S. economy for over two centuries? Of course it is.

Certainly there are social inequalities in the U.S. The original Constitution plus it's Bill of Rights guarantees equality in all elections and in all courts in this country and nothing more. Translates into a system in which the fate of individuals depends on what they freely choose to do or not do with their lives. Those who choose to be slackers suffer the consequences they freely imposed on themselves so of course we wind up with "social inequalities" galore.

By your leftist standards our system has too many freedoms.

Once again you demonstrate that you are incapable of seperating
the apples and oranges.

This forum never was about discussing electronic THEORY.

It's about discussing Amateur Radio POLICY...The application of
(operating) programs and techniques...Not about the insides of the box.

You've been told that over and over. You keep trying to make it
an "issue" since you cannot..WILL not accept that you are not
knowledgeable or skilled in Amateur Radio PRACTICE.

> >> Sitting in ham newsgroups and hurling libelous

others
> around "as if" (as the eastern colloquialism has it).

I understand "service" better than you obviously ever have,
Lennie.

I have "served" my communities as a Red Cross, ARES and Civil Air
Patrol volunteer.

I "served" the United States as a United States Marine.

I "serve" the needs of my community today as an Emergency
Department Nurse and again as a member of CAP.

YOU, on the otherhand, misrepresented the character of your
military service, insinuated that you have served "under the threat" of
threats that never existed while you were in the Army, and have proudly
boasted that you leave all other forms of community service to
others...even worse, you lamely attempt to misrepresent the services
and sacrifices of others as "patriotic buffoonery".

> >> >You are not a licensed Amateur. You cannot, therefore, be

>
> The two sentences are a typical example of newsgroup bullying.
>
> It is also typical of the fantasy of eliteness wallowed in by so
> many olde tyme hammes up to their armpits in self-
> righteousness.

Hey, Your Two-facedness...YOU were the one just two days ago
telling people what they were and were not qualified to "judge" others
on based on their lack of a degree or employment in electrical
engineering.

So now such logic DOESN'T apply to you and Amateur Radio...???

> Such self-righteousness FAILS in the USA...(SNIP)

You've tried this before. Still not germane.

> Nonetheless, those self-righteous self-appointed-sheriffs of ham
> radio want to RESTRICT access to public newsgroups on THEIR
> terms.

SNIP. Tried this before too. Seems YOU have no problem deciding
who "is" or "isn't" qualified to post here, yet can't stand it when
that same "logic" is heaped back on you.

> Nobody tells them what to do! They think they rule. :-)
> They don't but that doesn't stop those middle-aged "boyz in da
> 'hood" from spraying their "turf" graffitti where they want.

Lennie, you're not even from the next block over, yet you seem to
have no problem "spraying" whatever you want wherever you want.

> The PCTA extras go a step further. They also spray some kind
> of time stasis on everything in U.S. amateur radio, demanding a
> retro condition of timeless holding to old, outdated regulations
> that they bought into when young and a newbie to ham radio.
> They were brainwashed into a false idealism and have never
> cleared themselves of those olde ideals.

Again, one more absolute lie uttered by Leonard H. Anderson.

Leonard H. Anderson IS a pathological liar. He finds it easy to
lie.

> He is much into Titles, Rank, Privilege, plus being able to Show
> it through pretty certificates (suitable for framing) and medals.
> It's his personal bling-bling. If a federal or state agency can
> give him title, rank, status or privilege, they are favored...as
> long as they don't interfere with that title, rank, status or
> priviledge.

Again, Lennie, you demonstrate an intolerance for accepting that
others EARN what they receive.

The FCC did not GIVE me anything. I earned what I have.

The way I see it, I have only been "given" three things:

First of all was life...I had absolutely no say in that.

Second was an education. I was given no option in taking or not
taking it (at least until age 16...) and thankfully the people who gave
me life also gave me an appreciation for that education and what it
could ultimately provide.

Lastly was citizenship as a United States citizen. Just like life
and education itself, it was mine to do with as I pleased, and
thankfully it served me well. In return I serve it to the best of my
ability.

You just give "service", well..LIP service.

> >He fails to substantiate his "seven hostile actions."

> and date. We are all expected to "believe" him lest we incur
> an avalanche of subsequent insult postings (along with failure
> to give details). He will bully all who do not accept that.

If I cared about "recognition", I would have been a rock star or
politician.

As for the "lies"...well, Lennie, you and Brain still have a ton
of unanswered questions out there, and the two of you seem to do just
fine in leaving it to others to see what you are.

> All of us are somebody and each of us is unique. We can
> grow and learn by sharing experiences, data, results...or we
> can engage in countless, mindless flame wars ignited by

Nothing "spiteful" in my rubbing YOUR nose in YOUR foolishness,
Lennie...Or Brian in his...

If ya don't like the smell, well...all I can say is be more
careful of what you eat.

> He wants to ridicule others for having worked for what they have.
> As one example, he ridicules my long period of formal college
> education as a "night school" (in the manner of remedial
> language lessons put on by some local communities).

Oh NO, Lennie...I NEVER suggested your "night school" was
"remedial" ANYthing...What I HAVE suggested is that it was ludicrous to
expect us to believe you took 14 years to accomplish what is basically
a 3-4 year program....ESPECIALLY since you are as wise as you claim to
be.

> Those "night school" classes were fully accredited college
courses.
> Working a full day and then going to class at least three nights
> a week is hard work...worse on work overtime or having to
> cancel a whole semester due to the company sending me on
> field trips. Such is denigrated, made fun of by him...as if one
> going to "night school" was "stupid, ignorant, or slothful."

You put "stupid, ignorant or slothful" in quotations, and you KNOW
I never said those things.

What I DID say I HAVE said is that you were incompetent and took 3
times the average time to get your "degree".

> Steven James repeatedly made fun of my Army assignment a
> half century ago, saying "I embellished my 'military career' in
> exaggerating things and 'dishonoring' my unit members."

You claim to have been a "radio operator", yet the MOS's you cite were for repairman MOS's only. I have no doubt you caused RF to be emitted, however you were never a radio operator.

You also claimed to have been responsible for passing 1.2 million messages...THEN when confronted with the math, you changed your story to be that it was a "team effort" of the unit. That it was, but you still were not a radio operator, then or now. You "embellished" your service based upon the service of others.

You then tried to elevate yourself to War Hero status based upon a lame association-by-mmebership story with Soldiers who were KIA three years before you were ever in-country.

THAT made you a scumbag.

> I'd mentioned Army station ADA...(SNIP)

Over and over and over and over and over and.....

> I won't go into Steven James' vile insults about my wife other
> than to say that the University of Illinois (a center for
> computer research) at Urbana is NOT a "correspondence
> school" taking out ads in newsstand pulp magazines.

My "insults" about your wife are nothing of the sort.

My "insults" are aimed at your involving her alleged licensure and education somehow being yours by association.

Furthermore, if she WERE the mental health provider you insist she is, she's incompetent. Or blinded.

> It's unfortunate that this newsgroup delves into personality
battles
> so often...(SNIP)

Then, Lennie, that having been said...WHY do YOIU insist on calling people Nazi's, using childish diminutives for thier given names and insults of thier jobs, accomplishments or other "beliefs"...???

YOU initiate it. Period. You did it with Jim Miccolis...You did it with Hans Brakob. You did it with Jeff Herman, Steve Adell, Mike Cosolo, Larry Roll, Kim Walker and countless others, myself included.

> (UNSNIP)...or into petty arguments on definitions which have been
> made years ago (such as on-off keyed CW is "not" binary in the
> newest argument-for-argument sake). SUBJECTS should be
> discussed, not the personalities of correspondents.

This is a forum about Amateur Radio POLICY.

Every time.

Putz.

The reason the whole thing didn't collapse right away was that the
smokestacks are/were big exporters, bringing in hard currency.

Equality of rights and opportunities - not equality of outcomes.

Add in some other points about Sweden:

Compared to the USA, it's tiny in both population and land area. Also
virtually homogeneous (again compared to the USA). 'Diversity' means
something very different in Sweden. Heck, they split with Norway after
less than 100 years of alliance IIRC.

It's relatively easy and simple for a community/society to 'work' if
it's small and uniform. USA is neither, and never has been.

> By your leftist standards our system has too many freedoms.

Hot coffee is meant to be hot, and not poured on your skin, but rather
drunk, and the parts of the body that are supposed to be used are much
more tolerant of heat.

<snippage>

>>>Who are they going to sue?
>>
>>The manufacturers of equipment, the VEC that administered the test.
>> Find some deep pockets and sue, sue, sue.
>
> Then we better just give up, because there's no test to use a microwave
> oven or a table saw.

No, we simply make sure that people are *exposed* to safety
information. On the power tool or the oven, there are safety
disclaimers. I bought a chain saw that had an entire safety education as
relates to chain saws in the instruction manual. first page of the book

says that you have to read the entire manual before using the saw.

The Manufacturer has to make a good-faith effort to do safety education
for the tool.

Can that prevent lawsuits? No. But it makes it very difficult to win
that lawsuit when safety information has been provided.

> One of the most dangerous substances the average person handles is
> gasoline, yet there's no test for how to deal with it.
>

First, there is plenty of safety info about gasoline's flammability and
carcinogenic status on every pump (that is in legal compliance)

Second, gasoline is the sort of substance that people are used to. If
you told people that you had an idea of a sport where people drove at
each other at combined speeds of 140 miles per hour with a liquid that
was so flammable that it was virtually explosive, they'd say you were
nuts, even if you were telling them this in your car, driving down the
interstate at 70.

>> As a little example of the mindset, you might recall an accident

Have heard what is likely an urban legend of a ham (who was
also a broadcast chief engineer) using the 50KW AM transmitter in his
charge to work some rare DX on some HF ham band. Late at
night when it was off for maintenance. Seems unlikely as the
power amp would have circuits tuned for the MW AM broadcast
station's frequency and low pass filters to block harmonics
in the SW spectrum. That's not something one can modify
in a few minutes.

Oh, you could connect a ham transceiver to the broadcast
antenna tower to work some 160m DX, but that would be
legal.

It would be pretty easy to pull off so it wouldn't surprise at all me
if somebody really did put an AM b'cast station on 160.

> Oh, you could connect a ham transceiver to the broadcast
> antenna tower to work some 160m DX, but that would be

A similar stunt absoulutely was pulled off and I know the parties very
well. There were two young hotshot DX conetesters back around 1965,
Paul WA3FFR and his buddy Doug whose call I can't remember. Paul was an
EE co-op student engineer at my alma mater and worked at the USCG
electronics labs in Cape May NJ. Doug was a CG ensign or maybe a Lt JG
and worked with Paul. Those labs were the headquarters for the vast
USCG Loran system which operated on 160 along with the hams who could
find holes in the Loran QRM. Paul and Doug decided to put a Loran
antenna system to work in a 160 DX contest. And they did. They blew the
lid off the band and came up with a score which which rewrote the 160M
dxing record book, worked something like 68 countries in one
weekend.'Ole Stew Perry never knew what hit him. Unthinkable back then
and not bad at all even today.

Multiple choice exams are no longer allowed for element 1. It's too easy to guess the answer if you have even minimal copy. As I recall when I took my 20wpm, I was able to successfully deduce that the only possible answer out of the choices offered was Switzerland. The only letter that I had copied was the W. Some of us were too good at deduction and guessing.

Brian, "Caveat's" response is so typical of the already-
license-and-already-code-tested amateurs in regards
to the morse code TEST. :-)

They've passed it, they've got their license, and to
hell with newcomers...make those damn newcomers
take the code test like they had to!

[any other pithy little comments by PCTA are
interspersed with bullshit like "showing dedication
to the 'amateur community' and other mythological
nonsense]

>> Whether the military or WU use Morse or not has no bearing on the
fact that
>> Morse is just another ham communication mode that many enjoy.
>
>I think it does when that "just another" communication mode is
>pass/fail entry to HF.

See? Typical response from PCTAs. "CW" is 'just another
mode hams use.' :-)

NO OTHER MODE IS TESTED AS AUDIO
COGNITION OR HUMAN OPERATION FOR
ANY HAM LICENSE. Never was.

Radiotelegraphy signal cognition is the ONLY
separate pass-fail test element to gain
privileges below 30 MHz in the USA.

[now watch all the snarly PCTA come out of
the woodwork and "fight" those two facts with
all the usual tripe-wrapped pseudo-patriotism
gleaned from League propaganda]

>> And many people who type at less than 30 wpm are pecking away on the
>> internet. Is that an efficient use of time ???
>
>RRAP is a complete waste of time. It's been a while since anyone
>actually wanted to talk about code.

Not quite... :-)

But, RRAP is a waste of time in trying to talk
about the code test issue. The PCTA will NOT
allow any logic in such discussions...equating
morse code with amateur excellence is part of
the olde-tymer's brainwashing done long ago.
It is their quasi-religious talisman, an icon hung
on a wall to worship... :-)

>> BTW; How fast do you type ????
>>
>> Caveat Lector
>
>I haven't been clocked in years. Last time was ~45wpm about 1985.
Had
>to prove I could type to get on the mainframe. Teletypes and IBM card
>cutters kind of screwed up my regular keyboard ability etx

Back in '54 I was able to push the old Model 15s
to their 60 WPM designed-in limit; keys had a
mechanical lockout to insure that "burst" typing
didn't generate character errors. That was in the
Army on the station ADA order-wire loop. Those
old Teletype Corporation products were good to
self-learn fast-but-steady typing rates. It helped
if one already had touch-typing classes in high
or middle school... :-)

In middle school (we called it "junior high" back
then) of '48, we had old mechanical typewriters
in that classroom...NO markings on the keys!
Couldn't look down from the test, HAD to learn
to touch, trust the psycho-motor hookups being
made inside while learning. Was worth it later

since typing skill applied to all kinds of human communication and was VERY handy when we entered the 'computer age.'

A couple years ago a friend posed a dare at how good I was with a typing program on a PC. Could "cruise" (continuous copy) at 66 WPM with one error per thousand characters, "burst type" (quick spurts of keypresses) at about 90 WPM. Of course, 57 years of practice helps to keep/improve that skill. :-)

Never used a card punch ("026"?) but a few times and can't remember if the Teletype model 33 had that auto-key-lock-out feature. By the mid-70s I'd gotten so used to touch-typing that one only got mental alarms if a key got stuck somehow or the p-tape punch ran out of p-tape. But that was three decades ago. Anyone not using electronic typing means today is ultra-cheap or totally retro.

But, we've got all those religious Believers who insist and insist and insist that amateurs MUST take a morse code test to get an amateur license! Totally retro. Totally nuts! :-(

Since both my current and previous husbands are/were truck drivers, I tend to observe what trucks are doing on the road. Though I cannot speak for this particular accident, normally it is the CARS following the trucks too close for conditions. How can the truckers prevent that and the sometimes tragic consequences?

Retention of the morse code test for an amateur radio license
is bizarre, outdated, with NO logical connection.

> Where people Might say that the No-Code technicians quit because
The
>had a license that didn't have Element 1 as a test requirement.

It would seem that those "who might say" that are PCTA!

PCTAs have been insisting and insisting that the "no-code"
Technicians would be expiring en masse 12 years after the
1991 creation of that class. They didn't! Sunnuvagun!

Fact: The Technician class license number keep INCREASING!

According to www.hamdata.com for 22 Feb 05, the Technician
class is GROWING at an average rate of 27 per day! General
class growth is about 2 per day, Extras about 5 per day.

No-code detractors (such as "N2EY") used to say the Tech
numbers were "meaningless since the Tech-Plus renewals
were being tossed into the Tech category" and that was
supposed to indicate the "meaninglessness." :-) Isn't so.

Hamdata.com's latest tabulation (direct from FCC database,
publicly available) shows that there are 723,551 individual
amateur licenses (732,945 less 9,394 Club licenses). Of
those, 290,874 are Technician class and 58,999 are
Technician-Plus class. Very near 2 out of 5 individual
amateur licenses are Technician class. From the hamdata
tabulation of a year ago, Technician license growth was
9899 and Technician-Plus license decrease was 9521. The
delta is 378 to indicate no-code Technician license minimum

growth or at least 2 every 3 days.

The chief of the numbers-game players ("N2EY") is still going to insist (if past is truly prologue) the no-code Tech numbers are "falling"...from some kind of inventive rationalization. :-) Since it isn't PC to show losses of any class but the evil no-coders (as AH0A does/did), he will continue to maintain the no-coder "loss" is "there." :-) If Tech+ classes were "upgrading" their license classes, then the no-code Tech numbers would be increasing even more! [sunnuvagun!]

The sky has NOT fallen on the no-coders...except in the minds of the Chicken Little PCTAs. Paradigms were punctured and fell on those mighty instead... :-)

That's how I passed. Never said I was any good at Morse, quite the opposite
in fact. I found that 70% copy was good enough for 7/10 multiple guess. If
there hadn't been multiple guess I would never have passed 20wpm, for sure.
When you're asked was the operator's name Hank, Frank, Bert or Gert, and
you copy _ANK you have got the 50/50 like on Who Wants to be a Millionaire
on TV.

The other trick that I assume still works is listening for .. ,,, (IS),
which precedes every answer. Name is _____, Ant is _____.

And another thing. Copy IS Y____ and you know that either the rig is a
Yeasu or the antenna is a Yagi, and if you know how many characters came
after the Y, you know which of those is right. I miss the beginnings of
words, but I know that ____OOD is Kenwood. It's still Kenwood even if you
miss the D but just copy the OO.

I approached it like a crossword puzzle. I couldn't make a minute solid copy at 20wpm to save my life.

But it's character building. Enables you to slim RG8U with 50KW on a
USCG LORAN system w/o permission, and still be legal and friendly.

Cause you're using the "right" mode.

> Radiotelegraphy signal cognition is the ONLY

One night the wxcentral was trying to input "bogus" data and the DEC (digital electronics corporation) digitizing pad went tango uniform. I got called in to remedy the problem. I found several extension cords in the mop (buffer) closet, ran them to the card cutter in the "wx comm museum" in the lobby, and started cutting cards. I got the card deck to the system operator in time to update the model to generate the first guess for the next model run. Then I trained a couple of people how to do it and went back to bed. This was in 1987.

Todd, I think you need to work on the delivery a little more.

About 600,000 USA hams just tuned out your ideas.

1809. New Regs for VK

Newsgroup: rec.radio.amateur.policy
Date: 2005-02-23 01:21:17 UTC
From: Ashley VK3HAG <vk3hag@nerg.asn.au>
Message-ID: <hUQSd.171756$K7.167236@news-server.bigpond.net.au>
Source record: 103325

Around May this year, Australia will introduce the Foundation Licence as part of a new three-tier licence system. Foundation, Standard & Advanced. (Instead of the current 5 licence categories of Novice Limited, Novice, Intermediate, Limited, Unrestricted)

It will be an easier test than the current Novice test and allow the Foundation Licence operation on the following bands, with a maximum output of 10w using unmodified commercial equipment only. It is a modified version to suit VK of the UK Foundation Licence.

Foundations will have access to 3.5-3.7, 7.0-7.3, 21-21.45, 28.0-29.7, 144-148 and 430-450MHz

The Current VK Novice (VK$ L,M, N, P, V) and Novice Limited (VK$ H) will become (upgraded to) Standard Licencees and will have access to all of the above, plus 14-14.350, 52-54.00, 1.240GHz-1.3GHz, 2.4-2.45GHz, 5.6-5.8GHz. with max pwr of 100w. Meaning there is only four bands we wo't gain automatic access to. (Yep, I'm a H call, didn't see the point in sitting a Morse Exam when it's no longer a test requirement)

This means that all VK Novice and Novice Limited will gain automatic access to a whole heap of new bands and modes when the Licence is introduced. So our current lowest licence class, the Novice Limited, or "H" call will become a mid-classed operator around May. Expect increased activity on many bands when this happens.

Limited (VK$ T, U, X, Y, Z) and Intermediate will become (VK$ J, K) (upgraded) to Advanced "Full Call" and have access to all VK Amateur Bands with max pwr of 400w.

These changes are a result of the ACA's Review of the Amateur Service and the Outcomes of that Review.

So are all branches of the U.S. military operating on HF.
So are all civilian aircrew flying long routes using HF.
So are all private boat owners using HF.
So are various other civilian PLMRS users on HF.

> Buy a rig, an antenna, and pay some people to put it up.
Presumably the

1. The FCC decided it needed to test radio amateurs as
part of their task of regulating all U.S. civil radio.

2. The VEC Question Pool Committee decides WHAT
the questions are; FCC only specifies a total number
and the percentage correct for passing.

3. Any other reason is meaningless... ;-)

>For the same reason hams have to pass written tests on VHF/UHF to
>operate HF, high-power RF exposure questions to operate QRP, etc.

FCC doesn't mandate morse code skill as
being necessary to operate about 30 MHz.

Technician class licensees don't have to take
morse code tests and they are banished to the
radioland above 30 MHz.

>And because code is a big part of amateur radio, and a ham who doesn't
>know any just isn't fully qualified.

" F U L L Y Q U A L I F I E D ! "

G o t t a l o v e i t !

Olde tymers had to test for morse..."ergo," newbies have
to test for morse code!!!

Excellence in U.S. amateur radio is all about morse code
ability!!!!

"Real" hams are MORSEMEN!

U.S. radio amateurs are the keepers of the
living museum of morsemanship! [all other
radio services have given up on morse code
for main communications]

Olde tyme hamme morsemen need playmates.

Keep the test to subsidize the "CW" playground
for the olde tymers!

Screw the newbies to HF...MAKE them learn
code to please the elitist olde tymers!

> tragic consequences?

The speeds were well over 70. A truck that was passing the line of traffic jackknifed and the rest is history. The police did not see fit to issue any citations. All were traveling over the speed limit, and when the storm blew up, they were waaayy too fast for the conditions.

As for who is at fault, I have several times had to speed up to ridiculous speeds to not get run over by truck drivers who want to get a run for the next hill At speeds of 85 and more, they will get close

enough for you to count how many bugs were caught on their radiators. I've seen a number of accidents where a truck has simply run right over the car in front of them

I carry a CB, and I must say that there is an urban myth, believed by most truck drivers, that they *never* do anything wrong. What was especially funny was the time a truck jackknifed in front of a line of cars during a bad snowstorm - about 10 years ago - also on I-80, and by the time ten minutes had passed, the story passed around by radio was that a 4 wheeler had passed the truck, and cut him off, causing the jackknife. The offending 4 wheeler was never found. Not surprising to those of us who were close enough to see the accident happen!

Truck drivers are professionals, and almost always much better drivers than those in the automobiles. But that doesn't mean they are never to blame.

The late WB8LUA was chief engineer at WNOP, a Newport, Kentucky 1,000 watt daytimer with transmitters in suburban Cincinnati. They used a three tower critical array and all three towers were about 295 feet tall. Len would disconnect the feeders after sign-off and fire up on 160m through a Dentron tuner at the base of one tower. His barefoot sigs were incredible. Unfortunately for him, his TS-820's receiver was eaten alive by broadcast band overload.

An old time W2 in New Jersey (still living) was nailed by the FCC for running 35 KW from his home in the early 1970's. He beat the rap on a technicality and is involved in "hi-fi" SSB audio on 20m in his dotage.

Ah yes, that dreaded 5 wpm morse code TEST, the one which has you
beaten.

> They've passed it, they've got their license, and to
> hell with newcomers...make those damn newcomers
> take the code test like they had to!

No candidate for the Amateur Extra can or must take the morse code test
like I had to. They need only pass a measly 5 wpm exam. I'd love to be
able to express sorrow to those who find that hill too hard to take but
I just can't find it in me. If you find 5 wpm too much of an ordeal,
Leonard, you'll have to look elsewhere for sympathy.

> [any other pithy little comments by PCTA are
> interspersed with bullshit like "showing dedication
> to the 'amateur community' and other mythological
> nonsense]

You needn't show any dedication at all, Len. Just pass the 5 wpm.
I know, you have a PROFESSIONAL background in electronics and you're an
old fellow, long in the tooth but there are currently no gimmes on the
code test for HF access.

> See? Typical response from PCTAs. "CW" is 'just another

> on a wall to worship... :-)

Here's a talisman for you, Leonard. A ham who passes all written exams and a morse code exam knows a bit more than a ham who passes the written exams and no morse exam. You however, have passed no radio amateur exams of any kind.

That's the same way I learned typing, Len. Similar methods can be used in learning morse code. If you'd applied those methods to developing morse skills you'd have had a ham ticket for decades. Sitting around here grousing hasn't done much toward that end, has it?

>when you got to that point?

It can be felt in the fingertips as a slight impact
then you can't depress the key to make anything
happen unless the finger comes off and then
depresses the key. Happened with all Model
15s through Model 19s. Still happens on those
old dependable mechanical marvels.

>> Army on the station ADA order-wire loop.
>
>We had what was called a "Pony Circuit" over to "manual data" in the
>ADC/Ft Lee blockhouse.

The "order-wire" name (for in-house comms
only) originated well before WW2, probably
from the telephone companies (?). There
were lots of other names for those, some
flippant, some downright nasty. In the old
way of organizing, ADA had two loops: One

with Receivers (separate site), the other with
Transmitters but also including Frequency
Standards (located at Receiver site). All
the QSY orders, circuit-up, or circuit-down
notices came over the order-wires first,
written at all points in a loop so that there
was no mistake. Automatic log-book
keeping in a way. :-)

>>Those
>> old Teletype Corporation products were good to

One reason I stayed through typing class
was being able to socialize more with the
girls. More girls than boys in it way back
in prehistoric times. :-)

>If the Army had put you through dittybopper school, you might have
been
>a cook and I'd never learn about the model 15 speed governor.

Tsk. I wouldn't have made it through beeper
classes for a Field Radio MOS. I'd wind up
with reel on my back laying field wire for
EE-8 telephones. :-)

Gotta give a big hand of applause to the
mechanical engineers at Teletype Corp.!
The basic Model 15 TTY could clank away
for weeks of 24/7 duty needing only to be
fed paper and ink. Remarkable for so many
internal parts. Prior to FIELDATA code and
new machines, Army tried out a very few
circuits with new motors (and self governors)
to run at 75 WPM. Downtime suddenly
went into the basement during that 1955
test so that idea was shelved. For 220
TTYs at ADA torn-tape relay, only two
specialists were on-shift for maintenance.
At normal 60 WPM rates those two were
not busy. Dependable hardware.

I agree from a logical standpoint. But keeping
code test is high-charge EMOTIONAL issue
with olde-tymer hammes. GOTTA have or they
get tantrums, say no-coders are "not
qualified!" Gots to keep code test FOREVER.
Be FULLY QUALIFIED, only, repeat ONLY
possible by "CW."

U.S. ham radio be Living Museum of old
radio skills! Jimmie Who be curator? :-)

And as ususal, Brain, you miss the point.

It's not about me. It's about you and your lying buddy.

Steve, K4YZ

And again you miss (avoid) the point. It's not about "judging"
anyone or imposing any restrictions.

It's about pointing out what a twofaced, lying scumbag you are and
how YOU "impose" such restrictions on EVERYone else except you.

I could care less what you "talk" about.

It's that you, on the one hand, "demand" that everyone talk about
what YOU want to talk about when you want to talk about it, but then
quickly attempt to redirect anyone who dares stray from YOUR agenda
regardless of what the topic is.

RRAP is an "amateur radio policy" newsgroup as long as we discuss
nothing but the Morse Code test issue...Unless, of course, YOU want to
discuss 1950's era Army nets, radio controlled models, politics, the
value of your rela estate or retirement holdings, etc. Then it can be
a discussion group on any of those topics.

Thankfully you reintroduce new examples almost every day of YOUR
"double standard", thereby greatly reducing my workload and reproving
once again what a chronic, self-serving liar you are.

Thanks.

Putz.

No worries here are the links to verify my info:
ACA:
http://internet.aca.gov.au/ACAINTER.4259894:STANDARD:559558811:pp=PC_1608,pc=PC_1618,#Outcomes
http://internet.aca.gov.au/acainterwr/aca_home/licensing/radcomm/amateur_review/amateur_review_outcome.pdf

WIA: http://www.wia.org.au/foundation/
http://www.wia.org.au/news/2004/Amateur%20Radio%20Review%20Recommends%20New%20Licensing%20Structure.php

And when it actually happens, I'll post the links to the finalised new regs
when they become available.

Just waiting now for the ACA to make changes to it's legislation to
implement these changes, but wheels at government turn slowly..they can't
afford the oil!

Naaaaaaah.....It's more fun watching you make such a complete and
utter fool out of yourself.

You remind me of the "This is your brain...this is your brain on
drugs..." commercial, Lennie. In one instance you show us what you're
capable of, then you scramble it with your foolish behaviour.
